

- 1) Congrats to the ENERGISe research team, all members of Geography's Planning and Sustainability Research Group on submitting their forthcoming book 'Energy demand challenges in Europe: implications for policy, planning and practice' to Palgrave Publishers in the UK this week! The book examines the role of citizens in sustainable energy transitions across Europe. It explores energy problem framing, policy approaches and practical responses to the challenge of securing clean, affordable and sustainable energy for all citizens, focusing on households as the main unit of analysis. Overall it will be a valuable resource for researchers, policy-makers, practitioners and others interested in sustainable energy perspectives.
  
- 2) Anyone interested in travelling to Barcelona in October for free ENERGISe event?!

We are now well into the final year of the ENERGISe project, which concludes in November 2019. Our fieldwork is complete, and we have started to analyse data collected from our Living Labs, with over 300 households participating across 8 European countries. We already see that our results have generated exciting new insights into social and cultural influences on household energy use, as well as advancing the notion of 'energy sufficiency'. We will continue to update our [website](#) and social media accounts with the latest developments from the project.

We are currently organising our project [final conference](#), which will take place in **Barcelona on October 15<sup>th</sup> 2019**. Please see 'save the date' flyer attached. The event will be held in conjunction with the European Roundtable on Sustainable Consumption and Production [ERSCP 2019](#) conference, which takes place from 15-18 October 2019.

We would be delighted if you could join us in Barcelona for our final event, where we will present and discuss high-level findings from the project. We would be grateful if you could register your interest by clicking on the link below.
