

# 2012 Sino-European Symposium on Environment and Health (SESEH 2012)

Galway, Ireland, August 20 - 25, 2012. [www.nuigalway.ie/seseh2012](http://www.nuigalway.ie/seseh2012)

## Call for Abstracts!

All Chinese, European and international experts are welcome to attend!

China is becoming the 2nd largest economy of the world. The importance of environment and health is widely recognized there, and China welcomes international experts for collaboration. SESEH 2012 provides an opportunity for a direct communication between experts from China and the rest of the world, and helps to foster and develop international collaborations with China.

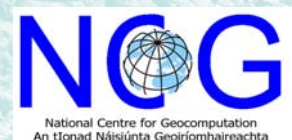

SESEH 2012 themes cover a wide range of issues in environment and health:

- Environmental sciences: chemistry, geochemistry, biogeochemistry, ecology and toxicology
- Environmental pollution: air, water (river, lake, and marine), soil, and food
- Environmental pollutants: metals and metalloids; persistent organic pollutants and pesticides
- Environmental technologies: soil remediation; waste water treatment
- Environmental management and monitoring: social impact assessment, economics and policies
- Medical geology, endemic diseases, environmental health and public health
- Links between environment and health, environment and genetic interaction
- GIS and quantitative methods in environment and population health
- Sustainable development and health: agriculture, industry, traffic, urbanization
- Climate change and population health
