http://www.nuigalway.ie/medicine/faculty_calendar.html

The 2014-15 Calendar is valid for that Session. Whilst every effort is made to ensure the contents of the Calendar are accurate, the Calendar is issued for the guidance of students and staff only. The Calendar is not an offer to provide programmes of study, nor is it in any way to be construed as imposing any legal obligation on the University to provide programmes either at all or in part in respect of any subject. No guarantee is given that programmes, syllabuses, fees or regulations may not be altered, cancelled, or otherwise amended at any time. The Calendar confers no rights on any student registered for the Session 2014-15.

NUI GALWAY PUBLISHES THE FOLLOWING CALENDARS:

COLLEGE OF MEDICINE, NURSING & HEALTH SCIENCES

The College of Medicine, Nursing & Health Sciences welcomes students whose academic interests include Medicine, Midwifery, General Nursing, Psychiatric Nursing, Speech & Language Therapy, Podiatry and Occupational Therapy. We also have a range of taught and research-based postgraduate masters and diplomas. Our goal is to equip graduates with the necessary knowledge, skills, and attitudes needed for a lifetime of learning and commitment to patients and society. We make full use of traditional and modern educational methods. College members are engaged in innovative research in many areas, with particular emphasis on cancer, gene and stem cell therapy, health services research, biomedical engineering science and health promotion.

Our College is currently expanding the undergraduate medical intake, and implementing an exciting new curriculum. In 2008 we commenced a 4-year Honours BSc programme in Podiatry, the only course of its kind in Ireland. We have developed Regional Academies for Teaching and Research at Sligo, Letterkenny, Mayo, and Ballinasloe. Our Nursing, Speech & Language, Podiatry, and Occupational Therapy courses are accommodated in Áras Moyola, which was opened in 2006. A new Medical Education Centre also opened in the hospital campus in 2007. We hope to begin the construction of a €40 million Human Biology building later this year, together with a €20 million clinical and translational research facility at the main hospital campus. This facility is jointly funded by the University, the Health Research Board and the Health Services Executive.

The mission of the College of Medicine, Nursing and Health Sciences is to enable '*Exemplary Learning and Leadership in Healthcare*', our programmes, students and staff strive to deliver this mission every day.

The College of Medicine, Nursing & Health Sciences has emerged from the recent academic restructuring of the University and capitalizes on existing close harmony across the healthcare disciplines.

It is constituted as follows:

STAFF DIRECTORY

COLLEGE OFFICE (Clinical Science Institute, Costello Road, Shantalla)

Professor Timothy O'Brien

Dr Dymrna Casey
 Dr Karen Doyle
 Dr Ailish Hynes
 Prof. Michael Kerin
 Prof. Andrew Murphy
 Dr Diarmuid O'Donovan
 Prof. Thomas Ritter
 Prof. Frank Sullivan
 Dr. Martina Ni Chulain
 Ms Emer Mc Hugh

Dean

Vice-Dean of Inter-Professional Learning
 Vice-Dean of Graduate Studies
 Vice-Dean of Education & Assessment
 Vice-Dean for Infrastructure
 Vice-Dean of Primary & Community Care
 Vice-Dean of Internationalisation
 Vice-Dean of Research
 Vice-Dean for Strategic Partnerships
 Director of Strategic Development
 College Administrator

School of Health Sciences (Aras Moyola, NUI Galway)

Dr Margaret Hodgins
 Ms Lorraine Kent

Head of School
 School Administrator

School of Medicine (Clinical Science Institute, Costello Road, Shantalla)

Dr Seán Dinneen
 Mrs Thérèse Dixon

Head of School
 School Administrator

School of Nursing & Midwifery (Aras Moyola, NUI Galway)

Dr Adeline Cooney
 Mrs Sylvia McDonagh

Head of School
 School Administrator

SECTION A
UNDERGRADUATE PROGRAMMES

GENERAL REGULATIONS FOR THE UNDERGRADUATE DEGREES IN HEALTH SCIENCES

(NFQ Level 8 Ref; www.nfq.ie)

EXPLANATORY NOTE

The Undergraduate Degree Programmes of the School of Health Sciences at NUI Galway are four-year Honours Degrees, which award the Bachelor of Science in one of the following specialisms: Occupational Therapy, Podiatry, Speech and Language Therapy.

Regulations may be altered periodically. The regulations applying to students are generally those which applied to their programme at the time in which they commenced their studies, unless otherwise specified in the General Regulations hereunder.

These Regulations form a total, individual clauses may be conditioned or varied by the provision of other clauses and cannot be applied in isolation.

The Regulations may also be supported by, or refer to other publications such as the University Undergraduate Prospectus (available on request or by following on-line links for Future Students from http://www.nuigalway.ie:84/undergrad/request_prospectus.php), and the General Calendar of the University.

I. Entry to the Degree is limited and is based competitively on the results of the Irish Leaving Certificate examination or its equivalent. The minimum requirement is matriculation, as set out in the Undergraduate Prospectus. [*Refer Matriculation requirements and Additional Requirements in the University Undergraduate Prospectus*]. Requirements arising where the results being presented are from any examination other than the Irish Leaving Certificate are also set out in the Prospectus.

Note:

The competitive cut-off may be significantly higher than the Matriculation standard.

All Applications are processed through the Central Applications Office (www.cao.ie).

II. Candidates who do not meet the Ordinary Matriculation Requirements as set out in I above, may matriculate on grounds of Mature Years [*refer Matriculation on Mature Years in the University Undergraduate Prospectus*].

Note: *All Applications are processed through the Central Applications Office (refer to www.cao.ie)*

III. Before entering the Degree programme every student must furnish Garda

Clearance. This is organised through the School Office on entering the University. Failure to obtain clearance may result in the student being unable to access practice education placements which are a requirement of the programme.

IV. The School of Health Sciences strongly recommends that students obtain the appropriate vaccinations (details available in programme handbooks). Placement providers stipulate that students must have the appropriate vaccinations before undertaking placements at their site. If students cannot provide evidence of vaccinations, placements may be refused.

V. Registration is carried out by the University. Students must be registered in their Degree programme not later than fifteen days after the commencement of Programmes.

VI. To obtain the degrees of B.Sc. in the selected Specialism as set out in the Explanatory Note (above);

(a) Students must pursue programmes of Study extending over a period of not less than four Academic Years and must pass the various Examinations prescribed below, meeting the requirements as set out elsewhere in these Regulations, in the Marks and Standards of the College and in Student Handbooks where necessary.

(b) The Examinations are as follows:

- (1) The First University Examination in their programme.
- (2) The Second University Examinations in their programme.
- (3) The Third University Examination in their programme.
- (4) The Fourth University Examination, being the Final Examination in their programme.

Note:

- (i) ***The duration of the programme cannot be shortened; no part of the Final Examination may be taken before the end of 8 Semesters of professional education.***
- (ii) ***There is a time-limit on the completion of the degree; while a student who fails their yearly examination in a particular year has the right to re-sit that/those examination(s) the following year [refer par. VII - X below], the total time allowed for the successful completion of the four University Examinations is 6 years or 12 semesters in total.***

VII. The First University Examination must be passed completely before a student can proceed to the Second Year.

(a) To enter this Examination, the student must have satisfied the attendance requirements on the First Year Programme as outlined in the student handbooks, including completion of all coursework. Exceptions may only be permitted by the Head of School where it is recommended by the programme on professionally verified grounds of student ill-health, close family bereavement or of significant personal difficulties.

(b) The Examination will be held before and during the Summer Examination session with repeat examinations, if necessary, held in the Autumn Examination session.

(c) Failure of the Examination in full or in part at the repeat examination will require the student to re-attend the First Year programme and re-sit the Examination in the following year.

(d) From September 2013 it will not be possible to compensate marks from one module to another for the purpose of passing failed modules by compensation in the First University Examination in the following programmes:

B.Sc. (Occupational Therapy)

B.Sc. (Podiatry)

B. Sc. (Speech and Language Therapy)

(e) The First Year examination must be completed within two years of entering First Year, extensions may not be given as this will breach the overall time-limit for completing the programme as set out in Par. VI above.

VIII. The Second University Examination must be passed completely before a student can proceed to the Third Year.

(a) To enter this Examination, the student must have satisfied the attendance requirements on the Second Year Programme, including completion of all coursework. Exceptions may only be permitted by the Head of School where it is recommended by the programme on professionally verified grounds of student ill-health, close family bereavement or of significant personal difficulties.

(b) The Examination will be held before and during the Summer Examination session with repeat examinations, if necessary, held in the Autumn Examination session.

(c) Failure of the Examination in full or in part at the repeat examination will require the student to re-attend the Second Year programme and re-sit the Examination in the following year, provided that this will not breach the overall time-limit as set out in Par VI above. In such a case the student will be unable to continue.

(d) From September 2013 it will not be possible to compensate marks from one module to another for the purpose of passing failed modules by compensation in the Second University Examination in the following programmes:

B.Sc. (Occupational Therapy)

B.Sc. (Podiatry)

B. Sc. (Speech and Language Therapy)

(e) The Second Year examination must be completed within two years of entering Second Year, extensions may not be given as this will breach the overall time-limit for completing the programme as set out in Par. VI above.

IX. The Third University Examination must be passed completely before a student

can proceed to the Fourth Year.

(a) To enter this Examination, the student must have satisfied the attendance requirements on the Third Year Programme, including completion of all coursework. Exceptions may only be permitted by the Head of School where this is recommended by the programme on professionally verified grounds of student ill-health, close family bereavement or of significant personal difficulties.

(b) The Examination will be held before and during the Summer Examination session with repeat examinations, if necessary, held in the Autumn Examination session.

(c) Failure of the Examination in full or in part at the repeat examination will require the student to re-attend the Third Year programme and re-sit the Examination in the following year, provided that this will not breach the overall time-limit as set out in Par. VI above. In such a case the student will be unable to continue.

(d) From September 2013 it will not be possible to compensate marks from one module to another for the purpose of passing failed modules by compensation in the Third University Examination in the following programmes:

B.Sc. (Occupational Therapy)

B.Sc. (Podiatry)

B. Sc. (Speech and Language Therapy)

(e) The Third Year examination must be completed within two years of entering Third Year, extensions may not be given as this will breach the overall time-limit for completing the programme as set out in Par. VI above.

X. The Fourth and Final University Examination must be passed completely before a student can be awarded the B.Sc. Degree

(a) To enter this Examination, the student must have satisfied the attendance requirements on the Final Year Programme, including completion of all coursework. Exceptions may only be permitted by the Head of School where this is recommended by the programme on professionally verified grounds of student ill-health, close family bereavement or of significant personal difficulties.

(b) The Examination will be held before and during the summer examination session with repeat examinations, if necessary, held in the Autumn examination session.

(c) Failure of the Examination in full or in part at the repeat examination will require the student to re-attend the Final Year programme and re-sit the Examination in the following year, provided that this will not breach the overall time-limit as set out in Par. VI above. In such a case the student will be unable to complete the degree.

(d) From September 2013 it will not be possible to compensate marks from one module to another for the purpose of passing failed modules by compensation in the Fourth and Final University Examination in the following programmes:

B.Sc. (Occupational Therapy)

B.Sc. (Podiatry)

B. Sc. (Speech and Language Therapy)

(e) The Final Year examination must be completed within two years of entering Final Year, extensions may not be given as this will breach the overall time for completing the programme as set out in Par. VI above.

XI (a) The Award of the B.Sc. Degree will require successful completion of all years of the Undergraduate Programme as set out in Rules V to X (inclusive) above.

(b) The calculation of the overall degree results awarded, including the calculation of Honours (if any), will be based on the proportion of the overall marks attained across the years of the programme as set-out in the Marks and Standards and recorded in the student handbook for each programme:

XII. Any student failing to pass the Examination indicated in Rules VI, to XI (inclusive) above within the specified intervals will be ineligible to proceed further with his/her studies. Exemptions to this rule will be granted by the Academic Council, on the recommendation of the College of Medicine, Nursing and Health Sciences, only for very serious reasons.

XIII. Re-attendance may be required from any student whose attendance is considered to have been unsatisfactory, or who has not attained a sufficient standard of knowledge as judged by examination or progressive assessment. Satisfactory attendance is generally regarded as attendance and participation in not less than 75% of the taught sessions provided. This is calculated on an individual module basis and is not based on overall attendance across modules. Students who have not achieved satisfactory attendance may be refused admission to examinations.

XIV. Given that these programmes award a professional qualification and lead to professional registration, there are specific requirements for the completion of clinical education and training components of the programme, which include also a prescription on the number of opportunities allowed to repeat /re-sit these components. In some cases, these are determined by the professional bodies (refer to each programme handbook for more specific rules which apply in each Therapy specialism). When students have not successfully completed these clinical components of their degree programme, in total or in part, including their practice education, clinical theory, or other such components as are required, and have exhausted all repeat /re-sit options for so doing, they are not eligible for the award of the B.Sc. in their designated Therapy specialism, but may, subject to the decision of the Head of School on the recommendation of the programme, transfer to complete the non-clinical degree, - the B.Sc. (Health Studies) as outlined in the Paragraph XV below.

XV. Students who are rendered ineligible for the award of the B.Sc. in their

designated Therapy specialism by the provisions of Paragraph XIV above,, may be offered the option of transferring to complete the non-clinical award of the B.Sc. (Health Studies). This programme, also an Honours (NFQ level 8 award) will include all of the modules of the BSc in their original Therapy specialism except the practice placement, and or clinical/practice education modules. These will be substituted by independent study module(s) in years 3 and 4 which will constitute a non-clinical degree route. In the independent study module(s) students will be required to demonstrate independent and critical thinking through appropriate assignment(s). Students may be transferred either in their Third Year or their Final Year as may be deemed appropriate. The decision to transfer must be approved by the Head of School on the recommendation of the programme, only in the circumstances described in Paragraph XIV above.

BACHELOR OF SCIENCE IN OCCUPATIONAL THERAPY

(B.SC. IN OCCUPATIONAL THERAPY)

Refer to General regulations for the Undergraduate Degree in the Clinical Therapies (NFQ Level 8 Ref: www.nfq.ie)

Occupational Therapy is the treatment of people with physical and psychiatric illness or disability through specifically selected occupation for the purpose of enabling individuals to reach their maximum level of function and independence in all aspects of life. The occupational therapist assesses the physical, psychological and social functions of the individual, identifies areas of dysfunction and involves the individual in a structured programme of occupation to overcome disability. The occupations selected relate to the consumer's personal, social, cultural and economic needs include the environmental factors which govern his/her lifestyle.

AIMS OF THE PROGRAMME

- To prepare students to successfully meet the professional requirements of the Association of Occupational Therapists in Ireland (AOTI) on behalf of the World Federation of Occupational Therapists.
- To prepare students to work effectively as occupational therapists in current and changing health care contexts and environments.
- To produce competent occupational therapists who can deliver occupational centred services to a broad range of clients, carers, colleagues and the community at large.
- To produce graduate occupational therapists who have knowledge and understanding of the processes involved in evidence based practice and are able to apply these appropriately.
- To produce graduates who are able to identify appropriate research questions and have the appropriate skills to design and carry out research to address these questions.
- To facilitate the education of therapists who are ethical practitioners, analytical thinkers and effective communicators.

OBJECTIVES OF THE PROGRAMME

The student will:

- Achieve an understanding of the concept of occupational performance and its application in the practice of occupational therapy;
- Develop clinical reasoning skills which promote the appropriate selection of assessment methods and treatment programmes for client types commonly treated by occupational therapists;
- Understand the central role of occupation in occupational therapy;
- Demonstrate an understanding of research principles and methods in promoting evidence based practice;
- Read professional and scientific literature critically and use the results;
- Select, develop and present ideas in an acceptable academic manner;

- Recognise the right of clients to participate in decision making about their therapy;
- Know the structure and functions of major government departments and other organisations relevant to the work of occupational therapists.

PROGRAMME CONTENT

This is a full-time undergraduate programme extending over four years or eight academic semesters. The course explores how difficulties in relation to physical or mental health can affect occupation (i.e. daily activities in relation to areas such as self care, work, leisure, play etc.) in all groups of people - children, adolescents, adults and older adults. The modules studied in the four years are described briefly below.

YEAR 1

HUMAN BODY STRUCTURE

This module introduces students to the fundamental principles of biological science and to the basic organisation, form and structure of the human body. Students develop knowledge and understanding of the structure and functional aspects of the musculoskeletal system of the body and support knowledge in Physiology. An understanding of the musculoskeletal system forms part of the knowledge required to understand the performance components (motor/sensory, cognitive and affective) of occupation.

HUMAN BODY FUNCTION

This course covers the physiology of the major body systems with the exception of the central nervous system which will be addressed in Year 2. Students develop knowledge and understanding of the physiological processes in the body associated with a normal, healthy, functional state. It is designed to underpin subsequent development of modules related to Occupational Therapy practice.

PSYCHOLOGY

This module introduces students to areas of psychology relevant to their professional activities. The main areas covered are Social Psychology, Clinical Abnormal and Forensic Psychology, Developmental Psychology and Cognitive Psychology. The module helps to underpin some of the material encountered in Occupational Therapy modules.

EXPLORATION OF OCCUPATION

This module is aimed at enabling the students to develop an understanding of themselves as occupational beings. Students will be introduced to the way in which occupation is conceptualised within occupational therapy and will learn how to conduct an occupational analysis. Students will also learn about roles, habit and routines and explore the nature of occupation and form.

MENTAL HEALTH I AND II

These modules will provide the students with some of the knowledge, understanding and skills needed to work as an occupational therapist in a mental health setting. The lectures focus on the aetiology, course, prognosis and management of various mental health conditions. The seminars and workshops will introduce and expand on the occupational therapy role, with emphasis on enabling people with mental health problems to engage in occupation.

ENABLING OCCUPATION - PHYSICAL DISABILITY

Students will be introduced to a variety of clinical conditions commonly encountered by occupational therapists in practice. Case studies used in seminars and workshops will be organised using the format of an occupational therapy model. Case studies will also reflect culture and gender diversity. Students will have the opportunity to develop skills, knowledge and understanding with regard to treatment approaches used in practice.

FUNDAMENTALS OF OCCUPATIONAL THERAPY I

This module is the first in a series of modules which will run throughout the four years and underpin the study of occupational therapy. In this module students will begin to develop a thorough understanding of occupational therapy identity. They will learn the history of the profession both nationally and internationally and will understand the occupational therapy process. They will reflect on client-centered practice and on outcomes for intervention and will also study the code of ethics via the discussion of ethical dilemmas and will discuss the various intervention methods of occupational therapists.

GROUPWORK AND PROFESSIONAL SKILLS

This module prepares students to engage patients/clients through a range of seminars and workshops designed to develop professional skills in dyadic and group situations. Students learn the principles of effective communication and effective teamwork and in addition to this; this module aims to encourage students reflection on their personal and professional development.

YEAR 2

NEUROANATOMY

This module runs concurrently with the module in neurophysiology and includes the fundamentals of neuroanatomy and functional neuroanatomy. It will underpin several applied occupational therapy modules. An understanding of neuroanatomy forms part of the knowledge required to understand the performance components (motor/sensory, cognitive and affective) of occupation.

NEUROPHYSIOLOGY

This module runs concurrently with the module in neuroanatomy and includes the fundamentals of neurophysiology. It will underpin several applied occupational

therapy modules. A n understanding of neurophysiology forms part of the knowledge required to understand the performance components (motor/sensory, cognitive and affective) of occupation.

HEALTHPSYCHOLOGY

This module provides students with an introduction to health psychology. Students are introduced to the main areas of sickness and health and application of psychological theories to the prevention of ill health and the promotion of health across the lifespan.

ENABLING OCCUPATION – PAEDIATRICS

This module introduces students to the knowledge and skills necessary to work effectively with children and adolescents with physical or intellectual disability or mental health problems

ENABLING OCCUPATION - ADULTS AND CHILDREN WITH INTELLECTUALDISABILITY

In this module, students become familiar with the specific issues and needs of adults with intellectual disability. This is a growing population and in this module issues such as advocacy, ageing, personal relationships and culture will be explored.

FUNDAMENTALS OF OCCUPATIONAL THERAPY II

This module is the second in the series. Here, students explore client narratives and professional behaviour and reasoning, the therapeutic relationship, interdisciplinary teams and managing conflict. There are also sessions aimed at preparing students for practice education placement.

PRACTICE EDUCATION

These two eight week placements provide students with an opportunity to experience the delivery of occupational therapy services in the field. Students will be supervised by a named qualified occupational therapist. An individual learning contract will be negotiated and agreed between the student and supervisor and will guide students learning on placement. Tutorials may be provided by practice educators and a minimum of one hour per week of formal supervision will be provided. Informal feedback will be given regularly.

YEAR 3

SOCIAL POLICY

This module examines the legislation and policy which underpins practice including the knowledge of employment and equality of opportunity.

EVIDENCE BASED PRACTICE

In this module, students learn to explore and appraise critically the best available

clinical evidence from systematic research and to apply and integrate this into clinical practice. Students are required to make use of evidence to guide professional judgement about the effectiveness of specific interventions for individual clients.

STANDARDISED TESTING

With increasing need for evidence, audit and clinical effectiveness, quantifiable measures of effectiveness are essential. In order to engage in and develop evidence based practice, occupational therapists need to be familiar with and competent in administering, scoring and interpreting the results of standardised tests. This module introduces the students to a range of standardised assessments used in Occupational Therapy and links with the module of evidence based practice.

ENABLING OCCUPATION – COMMUNITY

In this module, students explore the policies and trends for care in the community and implications for Occupational Therapy practice. The diversity of service users within the community is a key theme and will include all ages, cultures and conditions e.g. primary care, health promotion, equipment provision, community mental health etc. This module enables students to develop the knowledge and skills to work with individuals and groups in the community.

ENABLING OCCUPATION - OLDER ADULTS

This module prepares the student to work with older adults (>65 years) and considers the complexity of the interrelationships between normal aging, role change and pathology and the subsequent effect on occupational functioning.

RESEARCH METHODS

This module introduces the student to methods of scientific enquiry focusing on research and design. Both quantitative and qualitative methodologies will be introduced and the module includes both theoretical aspects and practical skills such as data analysis and statistics.

EMERGING AREAS OF PRACTICE

Using Service Learning, this module provides students with the opportunity to work in collaboration with community organisations to develop and implement occupational therapy programs which meet identified occupational therapy need(s) of the organisation. Students engage in community based learning, during which they collaborate with community organizations under the supervision of academic staff.

FUNDAMENTALS OF OCCUPATIONAL THERAPY III

This module is the third in a series of modules. The students have an opportunity to debrief and discuss their second year practice education experience and apply the case-studies carried out on placement to the modules of practice presented.

Students will be given an opportunity to develop knowledge, understanding and skills regarding models of practice and occupational therapy.

FUNDAMENTALS OF OCCUPATIONAL THERAPY IV

This module is the fourth in a series. In this module, students are introduced to the concepts and theory of occupational science. They examine the relationship between occupation and issues such as health and quality of life. They also explore the effects of occupational imbalance, deprivation and alienation and will develop knowledge and understanding and skills in the promotion of social justice.

YEAR 4

PRACTICE EDUCATION

These are the third and fourth year practice education modules each eight weeks long and provide further opportunity for students to experience the delivery of occupational therapy services in the field. This module may be taken abroad if a student wishes and if an appropriate venue with an accredited supervisor can be identified. Students will be supervised by a named qualified occupational therapist. An individual learning contract will be negotiated and agreed between the student and supervisor and will guide students learning on placement. In this placement it is expected that students will continue to work as effective team members but that they will also learn to manage a small caseload and communicate effectively with other team members, with parents/clients and carers/relatives in this context.

RESEARCH PROJECT

This module gives the student the opportunity to plan and conduct an original piece of research in a scientific and organised manner under supervision. Project guidelines are given to students. Supervision will be given by an academic supervisor. Students will write a 10-15,000 word dissertation and give a conference presentation.

MANAGEMENT

In this module students are introduced to basic management and leadership styles. The skills are relevant to their practice as staff grade occupational therapists. Current health and social service policies and proposed developments are also addressed and the importance of being aware of and acting upon changes in policy where appropriate stressed.

PREPARATION FOR PRACTICE

This module provides a synthesis and an update of the learning acquired to date. Students will review current health care strategies and policies and will learn about continuing professional development and draw up curriculum vitae and practice interview skills.

BACHELOR OF SCIENCE IN PODIATRY

B.Sc. in Podiatry

Refer to General regulations for the Undergraduate Degree in the Clinical Therapies (NFQ Level 8 Ref: www.nfq.ie)

Podiatry is a healthcare profession that specialises in the management of disease and disorder of the lower limb and foot. The foot is a highly complex structure, which can develop problems affecting the overall health and quality of life of the patient. Podiatry can significantly improve peoples' quality of life by promoting and maintaining mobility. Podiatrists are educated in diagnosis and in planning and implementing interventions for all age groups. Podiatrists work as autonomous practitioners demonstrating expertise in assessing, diagnosing and managing lower limb and foot related problems. As such, the Podiatrist works in a variety of health-care settings including public sector services such as the HSE in primary care and hospital settings, the commercial and private sectors, in education, research and in industry. Podiatrists are an integral part of the health care team augmenting the physician and surgeon in treating foot disease and preventing, where possible, the onset of foot disease. Podiatrists may work in single-handed practice or as a member of the wider multi-disciplinary team working in collaboration with other health professionals including nurses, physiotherapists and orthotists.

PHILOSOPHY AND AIMS OF THE PROGRAMME

The B.Sc. Podiatry programme is designed to educate and train those who wish to pursue a professional career in podiatry, as a health care professional, who specialises in the management of disease and disorder of the lower limb and foot. The Discipline is committed to providing a comprehensive education for podiatrists and the curriculum is based on best available evidence in relation to both theory and practice. The course aims to ensure that students achieve the academic and practitioner standards as laid out by regulatory and professional bodies in Ireland and the United Kingdom.

The B.Sc. Podiatry (equivalent to B.Sc. (Hons.) at UK institutions) extends over four years or eight academic semesters. The structure of the degree programme introduces, in a defined manner, inter-professional learning in both academic and clinical modules. It has, as its central focus, the integration of theory with clinical practice with opportunities for inter-professional learning with other health care professionals. The overall goal of this programme is to prepare competent, flexible, accountable practitioners, who are capable of lifelong learning. Preparing students to be flexible and self-directed in learning is considered to be a key outcome of the degree programme as it is recognised that the current rapid pace of change in the health services means the skills of tomorrow will be different from those of today. It is therefore fundamental that graduates "learn how to learn".

Lifelong learning is a continually supportive process, which stimulates and empowers individuals to acquire the knowledge, values, skills and understanding they will require throughout their lifetime and develop the capacity to apply these with confidence.

The aims of the programme are:

- To produce graduates that have an ability to apply knowledge and understanding of core podiatric theory to underpin podiatric practice and, using this knowledge, effectively plan, negotiate and deliver podiatric care
- To produce graduates, and skilled podiatrists, who possess excellent podiatric psychomotor skills for clinical practice
- To produce graduates who are able to analyse and evaluate the effectiveness of their treatment and management strategies
- To produce graduates of a high calibre who meet the specifications and standards of proficiency of professional and regulatory bodies
- To enable students to develop a range of personal and transferable skills commensurate with working effectively in dynamic healthcare environments in preparedness for clinical practice
- To enable students to develop a professional identity and ethos, with awareness of the scope and limits of the role of the podiatrist, working with and/or referring onto other agencies where appropriate
- To produce graduates who are able to acknowledge their commitments as a professional within clinical governance frameworks and take responsibility for their own learning and continuing professional development
- To ensure graduates appreciate the nature and complexity of organisations and policies within which podiatry is delivered
- To ensure graduates can demonstrate an understanding of evidence based practice, and research, and how this may underpin practice and effective service delivery
- To produce graduates who can demonstrate an understanding of ethical, legal issues and socio-economic factors that impact on healthcare delivery.

PROGRAMME STRUCTURE

The programme is outlined below:

Year 1

- Introduction to Clinical Studies
- Podiatry Theory 1
- Human Body Structure
- Gross Anatomy of the Lower Limb
- Human Body Function
- Professional Development
- Redefining Health and Wellbeing

Year 2

- Clinical Studies 2
- Podiatry Theory 2
- Introduction to Pharmacology
- Functional Anatomy and Biomechanics
- Research Methods 1
- Applied Pathophysiology
- Endocrinology
- Microbiology

Year 3

- Clinical Studies 3
- Medicine and Surgery
- Pharmacology in Health and Disease
- Research Methods 2
- Podiatry Theory 3
- Health Promotion in Podiatry

Year 4

- Clinical Studies 4
- Skills for Practice
- Working with Vulnerable Adults
- Footwear and Orthoses
- Research Dissertation
- Contemporary Practice

PROGRAMME CONTENT

Central to the curriculum are the clinical studies modules. These modules extend throughout the programme building from year one to integrate and articulate with the theoretical learning. In the first year the students are introduced to clinical protocols and pre-clinical skills, they then develop and acquire the essential psychomotor and communication skills required for podiatric practice. Various aspects of management planning skills are introduced at each stage. Ultimately the students acquire assessment and diagnostic skills and increasing competence leads to a comprehensive podiatric patient management which requires increasing cognitive and psychomotor skills to affect safe and efficient patient care.

The theoretic components of the programme underpin the clinical podiatric management of patients. The framework provides vertical and horizontal integration for the subject areas that impact on the practice of podiatry. These include physiology, anatomy, pathophysiology, pharmacology, medicine and surgery, health promotion and core podiatry. The modules build sequentially with the 1st year modules dealing mainly with normal structure and function. This allows time to absorb and reflect on normal function and structure prior to progressing to abnormal structure and disease states.

Evidence-Based Practice informs the student of the importance of audit, research and evidence based care. Therefore the importance of evidence-based practice will be integrated throughout all modules within the curriculum. Students are encouraged to develop the necessary skills to understand critique and apply research based evidence in practice. Research approaches and methodologies are covered within years 2 and 3 of the programme ensuring students receive grounding in research methods before they apply this knowledge through their dissertation in year 4.

A variety of approaches to learning and teaching are integrated throughout the curriculum including lectures, tutorials, work-shops, seminars and problem-based learning.

PRACTICE EDUCATION

Practice education is a process of work based learning which involves a partnership between the practice educator and the student in the practice setting. All students are required to complete a minimum of 1,000 hours of practice education successfully under the supervision of qualified Podiatrists. Practice education will be undertaken each year. The majority of practice education takes place at Merlin Park Podiatry Clinic, Merlin Park University Hospital, Galway. This state of the art facility provides a service to patients with a wide variety of medical and surgical conditions, children, sports injuries and patients requiring soft tissue surgery.

Practice education aims to introduce the students to the culture of the profession. It facilitates the development and application of the knowledge, attitudes, values and skills needed for the execution of appropriate professional behaviours. It also gives the opportunity to practice under supervision, and be assessed on professional standards and behaviours, ethical practice and inter professional partnership.

The main aims of practice education are:

- to integrate theory, practice, ethics and values of podiatry
- to apply knowledge, professional reasoning and professional behaviours within practice
- to promote professional competence
- to work as an effective team member
- to promote professional confidence
- to provide opportunities for students to integrate theoretical and practical learning
- to facilitate consolidation of student's previous learning

ASSESSMENT

A wide variety of assessment strategies are employed at stages throughout the programme in order to cater for a diversity of learning needs. The range and

diversity of assessments allows the varying strengths of individual students to be demonstrated. All assessments throughout the programme are designed to assess students' theoretical knowledge and clinical practical skills to ensure students meet the necessary competencies for professional practice. Assessment strategies that are employed include clinical practical examinations, continuous assessment and end of year examinations.

Pass Standard

The pass mark is 50%.

Compensation

Compensation is NOT allowed in academic or clinical modules.

BACHELOR OF SCIENCE IN SPEECH AND LANGUAGE THERAPY

B.SC. IN SPEECH AND LANGUAGE THERAPY

Refer to General regulations for the Undergraduate Degree in the Clinical Therapies (NFQ Level 8 Ref: www.nfq.ie)

Speech and Language Therapy is the health care profession specifically concerned with the assessment, diagnosis and management of communication and swallowing disorders. Speech and language therapists enable people with communication disorders to achieve their maximum potential to communicate. Having assessed the individual and established a diagnosis, the speech and language therapist plans and implements an intervention programme with the client. This may involve direct work with the client and family. It may also involve indirect work with significant others in the individual's environment to overcome barriers to communication, thus enabling the individual to function as independently as possible. Speech and language therapists also play an important role in the prevention of communication difficulties through health promotion and education programmes. Speech and language therapists work closely with other health care and education professionals e.g. doctors, psychologists, occupational therapists, physiotherapists, public health, nurses, paediatricians, ear nose and throat consultants, teachers, educational psychologists and resource and learning support teachers. Speech and language therapists work in a range of settings including: community clinics/health centres, hospitals, rehabilitation centres, child development centres, mainstream and special schools, language classes, people's homes and private practice.

AIMS OF THE PROGRAMME

The overall goal of the BSc (Speech and Language Therapy) degree programme is to prepare competent, flexible, accountable practitioners, who are capable of lifelong learning. Preparing students to be flexible and self-directed in learning is considered key because it is recognised that the current rapid pace of change in speech and language therapy practice means the skills of tomorrow may be different from those of today. It is therefore fundamental that graduates "learn how to learn". The course aims to ensure that students achieve the academic and practitioner standards as laid out by regulatory and professional bodies in Ireland. This programme has, as its central focus, the integration of theory with clinical practice and evidence-based practice. It is firmly centred on the core area of disorders of communication, dysphagia and professional development (including interprofessional learning), as reflected in the fact that all years contain substantial proportions of time devoted to these topics. The major ancillary disciplines of linguistics, biological sciences, and psychology are integrated at appropriate times in the curriculum to promote horizontal and vertical integration. In terms of practice education, speech and language therapy students are required to obtain experience in assessing, diagnosing, and treating communication and swallowing disorders in both children and adults in a variety of settings. The mission

statement of the programme is:

“To prepare speech and language therapists in training to become competent clinicians and independent lifelong learners, by providing a supportive learning environment to explore relevant theory and apply it to clinical practice, with an emphasis on lived experiences and evidence-based practice.”

The aims of the programme are:

- To produce graduates of a highcalibre who meet the specifications of the Irish Association of Speech and Language Therapists (IASLT).and CORU (the statutory registration Board for Health and Social Care Professionals).
- To enable students to gain the knowledge and core theoretical understanding of communication and related disorders and dysphagia and their management.
- To enable students to develop effective interpersonal and clinical skills.
- To enable students to develop a professional identity and ethos, with awareness of the scope and limits of the role of the speech and language therapist.
- To encourage students to be flexible and responsive practitioners, prepared for the workplace and changing patterns of service delivery.
- To provide opportunities for self-monitoring and personal development for the formation of reflective practitioners, capable of effective, critical evaluation and analysis thereby promoting continuing professional development and lifelong learning.
- To develop practitioners who appreciate their role in contributing to the knowledge and understanding of communication, its disorders and their management through the application of research to practice.

PROGRAMME STRUCTURE AND CONTENT

The BSc (Speech and Language Therapy) extends over four years or eight academic semesters.

Year 1

Psychology 1

This module contains three components, including: an introduction to the main theoretical perspectives in Developmental Psychology with a focus on the lifespan perspective on development; the theory and practice of Cognitive Psychology; and theoretical developments in the Psychology of Learning from a behaviour analytic perspective.

Human Body Structure

The aim of this module is to introduce students to the fundamental principles of biological science and basic organization, form and structure of human body. It will develop concepts which have particular relevance in the understanding of the anatomical basis of speech production

Human Body Function

This module introduces students to the fundamental principles of human body function which underpin speech and language.

Practice Education 1

This module introduces students to observation and reflection as learning and assessment tools. It will provide students with opportunities to study child development and to interact with people with disabilities at an appropriate level, through placements and university-based workshops.

Professional Studies 1

This module will facilitate students to begin to develop key knowledge, skills, and attitudes for speech and language therapy practice. It will provide opportunities for students to integrate knowledge, skills, and attitudes from other modules.

Linguistics 1

This module introduces students to key concepts in linguistics and to the development of communication across the lifespan.

Phonetics & Phonology

This module aims to equip students with an understanding of how speech is produced and to provide grounding in the descriptive and transcriptional conventions for transcribing speech sounds. It provides an overview of the procedures in carrying out a basic phonological analysis and to develop listening and transcription skills.

Communication Impairments and Dysphagia 1

This module aims to introduce students to classification systems, as well as the types, nature and etiology of developmental and acquired communication and swallowing impairments.

Year 2

Psychology 2

This module has two components. It introduces students to theoretical aspects of health and social psychology, as well as applications from these aspects of psychology to speech and language therapy practice.

Neuroanatomy

This module aims to facilitate understanding of the neuroanatomical functions of the body and how components of the central nervous system work together. Through neuroscience tutorials and cases with occupational therapy students, students will learn about the role of neuroanatomical functions in communication and swallowing impairments.

Neurophysiology

The aim of this module is to facilitate understanding of the neurophysiological functions of the body and how components of the central nervous system work together. Through neuroscience tutorials, students will learn about the relevance of neurophysiological functions in communication and swallowing impairments.

Practice Education 2

This module aims to orientate students to the professional role of a speech and language therapist. This module will prepare students to work in clinical settings. It will facilitate their active participation in the speech and language therapy process and application of theory with practice while on clinical placement.

Professional Studies 2

The aim of this module is to build on the learning of key knowledge, skills and attitudes underpinning speech and language therapy practice from year one. Students will learn about personal and professional practice and key knowledge and skills for the identification and management of clients with relatively straight forward communication impairments. Students will integrate knowledge, skills and experiences from other modules 'off-line' through provided cases with guidance.

Research Methodology 2

The aim of this module is to develop the student's knowledge of research to enable them to design their own research project by posing feasible research questions and setting hypotheses. The module introduces students to research methods as a set of multiple systematic strategies derived from both the quantitative and qualitative paradigms

Linguistics 2

The aim of this module is to build on knowledge and skills gained from Linguistics 1 and to focus specifically on the morphological, syntactic, semantic and pragmatic analyses of clinical data. This module aims to develop students with linguistic analytical skills which they will use in clinical practice.

Communication Impairments and Dysphagia 2

This module introduces students to the core clinical aspects of the management of relatively straight-forward communication and swallowing disorders e.g., specific aspects of assessment, characteristics of sub-types of communication and swallowing disorders, assessment, differential diagnosis, and management of cases.

Year 3 -Psychology 3

This module introduces students to cognitive neuropsychology and builds on their knowledge from previous modules in cognitive psychology and neuroscience. This module reviews the ways in which neuropsychological data has been used in models and ideas about the nature of brain processes and systems involved in core cognitive (and related) processes including: perception, memory, language and attention.

Practice Education 3

This module prepares students for increasingly independent work in clinical contexts. Students will have clinical placements where they will apply theory to practice in the management of complex cases.

Professional Studies 3

This module will build on the learning of key knowledge, skills and attitudes underpinning speech and language therapy practice from years 1, and 2. Students will learn about personal and professional practice and key knowledge and skills for the identification and management of clients with complex communication and swallowing impairments, with an emphasis on evidence-based practice. Students will integrate knowledge and skills from other modules. There will also be an emphasis on the wider sociocultural context and specialist service provision.

Research Methodology 3

This module broadens knowledge about research methodology by enabling students to understand and critically appraise existing research and to plan for their final year thesis.

Linguistics 3

This module equips students with core knowledge and skills in the areas of theories of bilingualism, narrative analysis and discourse analysis. This module also introduces students to a variety of instrumental techniques applied in experimental phonetics and speech and language therapy clinical practice with an emphasis on basic skills in use of instrumentation in speech and voice analysis.

Communication Impairments and Dysphagia 3

The aim of this module is to develop knowledge of the specific aspects of assessment, diagnostic features, assessment and treatment of complex cases. This module focuses on controversies in theoretical perspectives on communication and swallowing disorders, critical thinking and evidence-based practice. .

Year 4

Practice Education 4

The aim of this module is to facilitate students to consolidate their clinical skills, integrate theory and practice, and apply knowledge and resources to new clinical situations. It will prepare them to enter the workforce and smooth the transition to professional practice.

Professional Studies 4

This module will facilitate students to further develop personal and professional practice and key knowledge and skills for the identification and management of all clients with communication and swallowing impairments. There will also be an emphasis on prevention, organizational structures, service planning, quality systems and professional development.

Research Methodology 4

In this module students will conduct a semi-independent piece of research under the supervision of a member of staff.

ASSESSMENT

A wide variety of assessment strategies are employed at stages throughout the programme in order to cater for a diversity of learning needs. The range and diversity of assessments allows the varying strengths of individual students to be demonstrated. All assessments throughout the programme are designed to assess students' theoretical knowledge and clinical practical skills to ensure students meet the necessary competencies for professional practice. Assessment strategies that are employed include clinical practical examinations, continuous assessment and end of year examinations.

THE OVERALL STRUCTURE AND ECTS IN THE BSC (SPEECH AND LANGUAGE THERAPY)

BACHELOR OF ARTS- SOCIAL CARE

(NFQ LEVEL 8 REF WWW.NFQ.IE)

This programme leads to the award of Bachelor of Arts – Social Care (under the programme regulations of the College of Arts, Social Sciences and Celtic Studies).

PROGRAMME STRUCTURE.

The Bachelor of Arts (Social Care) provides teaching of theoretical concepts applied to social care practice. It was developed in response to the continuing educational needs of social care workers in the context of the professionalisation of social care work and includes both theoretical and practice components. It is designed to meet the needs of adult students returning to education and to enable those working in the social care field to further develop and enhance their understanding, knowledge and skills. The programme aim is to provide students with a professional education and training in the principles and practice of social care.

Year 1 of the programme is offered in various centres supported by local tutors. These centres are Galway and Portarlinton (Centre availability is subject to sufficient numbers of students registering). In Galway, subject to sufficient numbers, two class options are expected to be available – during the day (Saturdays, 10am to 4pm) or in the evening (Tuesdays, 6pm to 9pm). In Portarlinton, subject to sufficient numbers, an evening class is expected to be available (Tuesdays, 6pm to 9pm). Evening classes run approximately fortnightly, while day classes operate approximately once every 4th weekend, throughout the academic year (September to May). The first year provides a general introduction to the field of social and health studies through three course components: course modules, a seminar and work placement. Students receive interactive materials for home study and attend a workshop for each module. Students also attend one weekend seminar in NUI Galway, which normally takes place in mid-November. In addition, students complete supervised work placement in a social care setting. Students who successfully complete these course components may leave the programme at the end of this first year and be awarded a Certificate in Social Care or they may continue to the second year of the programme.

Year 2 is delivered through interactive distance education materials for home study, a seminar and work placement. Local workshops are provided in Galway (Saturdays, 10am to 4pm) and Portarlinton (Mondays, 10am to 4pm) (Centre availability is subject to sufficient numbers of students registering). Classes take place approximately every second week throughout the academic year. This second year develops the skills gained in year 1 as well as developing on the theoretical ideas that underpin social care practice and service provision. On successful completion of year 2 students may leave the programme and graduate with a Diploma in Arts (Social Care). Students who attain an overall average for year 2 of 60% or more can progress to year 3.

Year 3 builds on years 1 and 2 with further theoretical exploration of social care work and service provision through interactive distance education materials, workshops and work placement. The core competencies required for working in the social care field are further developed and linked to their application in a workplace setting. This year is currently offered at NUI Galway only (day workshops, 10am to 4pm). Years 3 and 4 form the degree cycle of the programme.

The final year, year 4, is currently offered at NUI Galway only (day workshops, 10am to 4pm). This final year of the BA in Social Care is comprised of workshops, work placement and self-directed study components. In addition, learners complete a dissertation on a particular area of social care work, with the support of a named individual supervisor.

PROGRAMME CONTENT

Year One: Certificate in Social Care

Module	ECTS
Introduction to integrated and experiential learning	5
Introduction to social care practice and care skills	5
Introduction to legal, ethical and professional practice in social care	10
Health and health promotion in the social care context	5
Introduction to communication skills for social care	5
Social and health services: history, systems and context	5
Work-placement 1	10

Year Two: Diploma in Arts (Social Care)

Module	ECTS
Sociology: social care in context	5
Psychology across the lifespan in the social care context	5
Health promotion model of social care	5
Introduction to care planning for social care	5
Communication and relationship skills for social care	5
Legal, ethical and professional practice in social care	5
Introduction to research for social care	5
Work-placement 2	10

Year 3: Bachelor of Arts (Social Care)

Module	ECTS
Experiential learning and evidence based practice in social care	5
Care planning in social care practice	5
Professional autonomy and accountability in social care practice	5

Social care across the lifespan – working with children and young people	5
Health promotion strategies and approaches in social care	5
Research methods and methodology for social care	10
Work-placement 3	10

Year 4: Bachelor of Arts (Social Care)

Module	ECTS
Social care across the lifespan – working with adults and older people	5
Management and leadership in social care settings	10
Research project	15
Social care and health promotion – national and international professional perspectives	5
Work-placement 4	10

Assessment and Regulations

Assessment of course modules, seminars and work placement is based on a combination of written assignments, practical work and project work in each year of the programme.

Entry Criteria

Formal academic qualifications are not required to commence this BA. Candidates are, however, expected to have good reading and writing skills, as independent home study is required. Candidates should also have experience in care work, which has been gained in either a formal or informal capacity. Candidates under 21 years should meet the University's minimum matriculation entry requirements. Those for whom English is not the first language should check the university requirements at:

<http://www.nuigalway.ie/international/english.html>

Students must satisfy Garda/Police clearance requirements.

GENERAL REGULATIONS FOR THE DEGREES OF MB BCh BAO (NFQ LEVEL 8 REF; WWW.NFQ.IE)

EXPLANATORY NOTES

1. The Programme of the Medical School at NUI Galway is a highly integrated modular five year programme, with a requirement for a Foundation Year for some students.
2. In the Session 2014-15 the University will consider applications for up to four places on the ACCESS programme.
3. All Applications are processed through the Central Applications Office (CAO).
4. In the Session 2014-15 the University will consider applications for up to 2 places for Mature Entry (<http://www.nuigalway.ie/medicine/undergrad.html>).

REGULATIONS

I. Entry to the Medical School is limited and is at present based competitively on the results of School-Leaving Examinations and the HPAT aptitude test. Standards as deemed equivalent from time to time are applied to International Students presenting alternative qualifications. Students must also satisfy the Garda Vetting and Medical Clearance requirements.

II. Students for admission to the First Medical Year must have successfully completed the Foundation Year for Medical School **OR** - subject to attainments at Biology, Chemistry and Physics in Leaving Certificate or its equivalent - students may be deemed to have met the requirements for direct admission to the First Medical Year

III. Before Registration as a medical student every applicant must furnish evidence

- (a) that he/she has passed a recognised Examination in General Education (the Examination in General Education required by the National University of Ireland is Matriculation according to the requirements of the College of Medicine, Nursing and Health Sciences, or an Examination accepted by the University in lieu thereof, normally the Irish Leaving Certificate or its recognised equivalent);
- (b) that he/she has **EITHER** passed the Foundation Year for Medical School. (To fulfil this requirement, programmes in Biology, Chemistry and Physics are given in the National University of Ireland, Galway, in the Foundation Year for Medical School) **OR** has satisfied the requirements for direct admission to the First Medical Year

IV. Registration is carried out by the University. Students must be registered as Medical Students not later than **fifteen days** after the commencement of those Programmes for which Certificates of attendance will be required of them (First Medical Programmes).

V. To obtain the degrees of MB BCh BAO Medical Students must pursue programmes of Study extending over a period of not less than five Academic Years and must pass the various Examinations prescribed in the Regulations.

(a) The Examinations are as follows:

- (1) The Foundation Year in Medicine (where the student is commencing their medical studies in this year)
- (2) The First University Examination in Medicine.
- (3) The Second University Examinations in Medicine.
- (4) The Third University Examination in Medicine.
- (5) The Fourth University Examination in Medicine.
- (6) The MB BCh BAO Degree Examinations.

VI. For the student who commences their medical studies in the Foundation Year this Examination must be passed before a student can proceed to the First Year Medical Programme.

(a) The Foundation Year Examination must be passed within two years from the date of entry. The Foundation year examination will be held during the Summer Examination Period with repeats, if necessary, held in the Autumn Examination Period.

(b) From September 2012 it is not possible to compensate marks from one module to another for the purpose of passing failed modules by compensation in the Foundation Year Examination.

VII. The First University Examination in Medicine must be passed before a student can proceed to the Second Year Medical Programme.

(a) The First University Examination in Medicine must be passed within two years from the date of entry or of passing the Foundation Year for Medical School.

(b) The First Medical University Examination will consist of the examination of the learning from each of the introductory modules, systems-based and Medical professionalism modules in the programme.

(c) The First University Examination will comprise examinations on Semester 1 modules in the Winter Examination Session and examinations on the Semester 2 modules in the Summer Examination Session. Repeat examinations, for both.

(d) Semester 1 and Semester 2 modules, if necessary will be held, during the Autumn Examination Sessions.

(e) From September 2012 it is not possible to compensate marks from one module to another for the purpose of passing failed modules by compensation in the First Medical University Examination.

VIII. The Second University Examination in Medicine must be passed before a student can proceed to the Third Year Medical Programme.

(a) The Second University Examination in Medicine must be passed within three

years from the date of entry or of passing the Foundation Year Medical Programme.

(b) The Second Medical University Examination will consist of the examination of the learning from each of the systems-based and Medical professionalism modules in the programme.

(c) The Second University Examination will comprise examinations on Semester 1 modules in the Winter Examination Session and examinations on the Semester 2 modules in the Summer Examination Session. Repeat examinations, for both Semester 1 and Semester 2 modules, if necessary will be held, during the Autumn Examination Sessions. From September 2012 it is not possible to compensate marks from one module to another for the purpose of passing failed modules by compensation in the Second Medical University Examination.

IX. The Third Medical University Examinations must be passed before a student can proceed to the Fourth Medical Year.

(a) The Third Medical University Examinations must be passed within four years of entry or of passing the Foundation Medical Examination.

X. The Fourth Medical University Examinations must be passed before a student can proceed to the Final Medical Year.

(a) The Fourth Medical University Examinations must be passed within Five years of entry or of passing the Foundation Medical Examination.

XI. The Final Medical University Examinations must be passed within six years of entry or of passing the Foundation Medical Examination.

XII The Award of the MB BCH BAO Degree will require successful completion of all years of the Medical Undergraduate Programme as set out in Rules VI, to XI (inclusive) above.

Note: *The operation of these regulations will invoke a time-limit on completing the programme - a student who fails a year-of-programme for the **second time** may not continue and must withdraw from the Medical Programme. Similarly a student who fails to complete two separate years-of-programme within the academic years allowed for each may not continue and must withdraw from the Medical Programme.*

(a) The calculation of the overall degree results awarded, including the calculation of Honours (if any), will be based on the proportion of the overall marks attained across the years of the programme as follows:

i. For candidates who entered the Medical Programme after 2008 and before 2012, whether into the Foundation Programme or the First Medical year, the degree result is calculated on the full five (5) years; based on 10% of the result attained in the First Medical Examination, 10% of the result attained in the Second Medical Examination 20% of the result attained in the Third Medical Examination, 30% of the result attained in the Fourth Medical Examination and 30% of the result attained in the Final Medical Examination.

ii. For candidates who entered in 2012-13 and following, whether into the Foundation Programme or the First Medical year, the degree result is calculated on the final two (2) years of the programme; based on 50% of the result attained in

the Fourth Medical Examination and 50% of the result attained in the Final Medical Examination. Repeat Examinations or re-sits. Examinations of all modules failed or deferred in the corresponding regular session (Christmas and/or May) can be retaken in the August session. The marks attained at a repeat or de ferred examination will not be capped. Marks will be fully as attained on merit, including honours, if any, in the repeat/re-sit examination. Repeating the year-of-programme is required from any student whose attendance is considered to have been unsatisfactory, or who has failed individual modules of the programme at the second (Autumn repeat) sitting.

iii. Satisfactory attendance is generally regarded as attendance and participation in not less than 70% of the Compulsory components of the programme. All such components are appropriately notified in the course information material provided to students. Attendance at not less than 70% of these components is a pre-requisite for taking the assessments and examinations of the relevant semester and /or year-of- programme. Students deemed to have unsatisfactory attendance will be excluded from the examinations of that programme component, or of the module(s) in which these components occur, and in the event that examinations are taken, any results will be rendered null. The provisions of this requirement may only be varied by the approval of the Student Affairs Committee and agreed by the Head of the Medical School where exceptional circumstances beyond the control of the student are clearly demonstrated to their satisfaction.

XIV. A student who does not successfully pass any year of the Medical programme within the provisions set out in Rules VI to XI and Rule XIII above, is required to register for the repeat year and, to re-attend as set out above, and complete all continuous assessments, other coursework and examinations in each failed module. This requirement may be varied in exceptional circumstances on the recommendation of the Student Affairs Committee, and agreed by the Head of the Medical School.

XV. Special Provisions may be applied in individual cases at the discretion of the Medical School as follows:

(a) **Exemptions** from modules on the basis of previous academic achievement are not allowed.

(b) **Deferral** of examinations is considered only in certain circumstances such as bereavement, personal or medical circumstances, which can be professionally or independently verified. Request should be made to the appropriate Module Leader or to the Year Co-ordinator who will forward it to the Student Affairs Committee. Deferral normally applies **only between the period of the scheduled first-sitting and the first opportunity for a re-sit – normally the Autumn**. Deferral extending into the following academic year falls within the terms of *Leave of Absence* described below. In foreseen circumstances (e.g. pregnancy) requests should be made at least 3 months in advance. Deferring the first-sitting of examinations will not incur any mark penalties. Students who defer will sit examinations in the Autumn and this will be deemed to be their first-sitting and will fall outside also of the general time-limit referred in Par. XII above.

(c) **Leave of Absence** involving the withdrawal of the student from their studies for a period of time and consequently the loss of opportunity to sit examinations also is considered on similar grounds as the *deferral of examinations* set out in the

paragraph above. Students must apply for leave in the same manner also. Where leave extends for a significant period, there is a limit on the period for which results of examinations successfully passed may be retained. In any year-of-programme which remains incomplete at the time that leave commences, the results in any such modules is valid for a maximum period of 2 years (Students should refer also the time-limit noted in Par. XII above

(d) **Compensation:** From September 2012 it is not possible to compensate marks from one module to another for the purpose of passing failed modules by compensation. This includes all core or mandatory prescribed modules or groups of modules, or between sub-components of Modules such as the SSM options

XVI. Medical Graduates, in addition to holding the Degrees of MB BCh BAO must be registered as Medical Practitioners in the appropriate Medical Register. All graduates who wish to practice must register provisionally with the Irish Medical Council. Graduates who wish to practice in Ireland (excluding Northern Ireland) must, after completing one year's internship in an approved hospital, be fully registered with the Irish Medical Council. Those who wish to practice in Great Britain and Northern Ireland must be fully registered with the General Medical Council. Graduates may, if they so wish be fully registered in both Registers. The attention of Medical Graduates is directed to the following Extract from Medical Practitioners' Act, 1978: "A Certificate of Experience shall not be granted to any person unless, after he had been awarded a primary qualification, that person had been engaged in employment in a residential medical capacity in one or more hospitals approved by the Council for this purpose and had been so engaged for such period or periods as may be determined by the Council."

In accordance with Regulation of Medical Council the period for which a person shall have been engaged as an Intern shall be a period of 12 months.

DEGREES OF MB BCh BAO

Refer to General regulations for the Degrees of MB BCh BAO NFQ Level 8 Ref; www.nfq.ie)

The following Section provides an outline of the individual years-of-programme of the medical degree programme and the rules which are applied. The curricular detail is provided in the further section entitled *[SYLLABUS OF PROGRAMMES OF INSTRUCTION FOR THE DEGREES OF MB BCh BAO]*

PROGRAMME LEVEL OUTCOMES FOR THE UNDERGRADUATE MEDICAL DEGREE

(MB, BCh, BAO).

Programme aims

The programme aims to provide students with an integrated, holistic, student-centred medical curriculum based on the principles of adult learning and emphasising professionalism and life-long learning skills; to comply with the statutory requirements laid down by the Irish Medical Council, the Medical Practitioners' Act and the European Commission and in accordance with other international licensing and registering bodies.

Outcomes/Competences:

On completion of the programme, the medical graduate will be able to¹:

1. Diagnose, explain and manage health problems using the current scientific principles, knowledge and understanding that underpin medicine whilst demonstrating a sound knowledge of the biological, social and psychological basis of health and disease

(Medical Expert, Scholar)

2. Communicate effectively and compassionately with patients, carers, colleagues and society in all relevant media necessary to provide high quality, scientific and multidisciplinary patient care

(Communicator, Collaborator)

3. Perform a range of clinical skills and procedures safely, reliably, unsupervised and to the standard of a pre-registrations doctor

(Medical Expert)

¹ Based on the Irish Medical Council's competency statement and incorporating specified domains of good professional practice

4. Identify, evaluate and apply evidence to their practice of medicine while demonstrating an understanding of how such knowledge is created, shaped, appraised and shared

(Medical Expert, Scholar)

5. Apply their knowledge of the ethical, regulatory and legal framework within which they operate to their practice of medicine while recognising the roles and contributions of other healthcare professionals to the provision of high quality, holistic care

(Professional, Collaborator)

6. Provide the highest levels of ethical, rational and humane care to all patients they encounter while managing effectively the resources available to them

(Professional, Manager)

7. Apply effectively knowledge of principles of health promotion and disease prevention at individual and population level to their practice medicine

(Medical Expert, Health Advocate).

8. Manage their own professional development and demonstrate an ability to contribute effectively to the teaching of others

(Professional, Scholar).

MB. BCh. B.A.O Degree PROGRAMME OVERVIEW

FOUNDATION YEAR (0MB)

Semester 1	Semester 2
BO101 Biology (15)	
CH120 Chemistry (15)	
PH101 Physics (15)	
MD103 Introduction to Medicine (15)	

Modules (and ECTS weightings) for Foundation Year are as listed above with lectures and practical being provided over two semesters. Students will be assessed on completion of the relevant module i.e. during the Summer Examination Session, with the exception of the Early Patient Contact component of MD103 which will be examined at the end of Semester I. Students required to take the Foundation Year cannot be registered for the five years Integrated Medical Programme until they have passed the Foundation Year Medical Examination. See section above for **General Regulations** regarding examinations. See School of Medicine Undergraduate Medical Programme **Curriculum Document** for assessment details for each

module. Further information and guidance is available on **Blackboard**.

FIRST MEDICAL YEAR (1MB)

Semester 1	Semester 2
MD137 Principles of Physiology (10)	MD121 Cardiovascular System (5)
	MD122 Respiratory System (5)
MD138 Biomolecules, Metabolism and Energy	MD124 Gastro Intestinal System (5)
MD1101 Basics of Body Structure/ Musculoskeletal System (10)	MD123 Renal System (5)
	MD140 Metabolism, Nutrition and Health (5)
MD139 Medical Professionalism 1 (10)	

Modules (and ECTS weightings) for Year 1 are as listed above. Semester 1 modules provide discipline specific introductory material relating to Anatomy, Physiology, and Biochemistry. Semester 2 modules are devoted to integrated systems-based modules. Medical professionalism is taught throughout the year. Students are examined on completion of each module, at the end of the relevant semester. Continuous assessment is also provided for. See section above for **General Regulations** regarding examinations. See School of Medicine Undergraduate Medical Programme **Curriculum Document** for assessment details for each module. Further information and guidance available on **Blackboard**

SECOND MEDICAL YEAR (2MB)

Semester 1	Semester 2
MD224 Central Nervous System (10)	MD201 Health and Disease 2 (15)
MD214 Introduction to Pharmacology (5)	
MD210 Genes, Gametes and Embryos (5)	MD204 Drugs and Disease (5)
MD206 Molecular Medicine (5)	MD209 Multi Organ Failure (5)
MD202 Medical Professionalism 2 (10)	

See section above for **General Regulations** regarding examinations. See School of Medicine Undergraduate Medical Programme **Curriculum Document** for assessment details for each module. Further information and guidance available on **Blackboard**

THIRD MEDICAL YEAR (3MB)

Semester 1	Clinical Phase Semester 2
MD302 Health & Disease II (15)	MD314 Foundations of Clinical Theory (10)
MD304 Global Health and Development (5)	MD312 Foundations of Clinical Diagnosis (10)
MD316 Professionalism – Core Clinical Skills (10)	MD 313 Foundations of Clinical Management (10)

Modules (and ECTS weightings) for Year 3 are as listed above. The teaching programme for the 2nd Semester (3.2) is delivered over 18 weeks at Galway University Hospital and at the affiliated Academies in Castlebar, Sligo, Letterkenny and Portiuncula Hospital, Ballinasloe. The 3.2 programme is organised into a number of strands as follows:

	Strands: Year 3.2 (core and specialty)
1	Cardiovascular
2	Respiratory
3	Gastrointestinal studies
4	Care of elderly
5	Peri-operative, critical care
6	General medicine/endocrine & general surgery

See section above for **General Regulations** regarding examinations. See School of Medicine Undergraduate Medical Programme **Curriculum Document** for assessment details for each module. Further information and guidance available on **Blackboard**

FOURTH MEDICAL YEAR (4MB)

Semester 1	Semester 2
MD420 Primary Care and Mental Health (20)	
MD 422 Women's and Children's Health (20)	
MD421 Advanced Clinical Skills (15)	
	MD409 Special Study Module (5)

Programme Structure and Delivery Approach

The Year 4 programme consists of modules as listed above. These modules will be delivered by the disciplines of Obstetrics & Gynaecology, Paediatrics, Psychiatry,

General Practice, and Oto-rhino-laryngology. The Special Study Module is a core component of professionalism training, and will take place throughout semester 2. Other aspects of professionalism training including clinical methods, ethics, and understanding health & illness will be threaded throughout the specialist modules and delivered by the respective specialist disciplines. The PCMH and WCH modules will be divided into 2 parts, one of which will be delivered in semester 1 and one of which will be delivered in semester 2. Teaching methods will include lectures, small group teaching, case studies, and clinical attachments at UHG and at medical academies. A proportion of the students will complete all of semester 1 in either the Sligo, Letterkenny, Castlebar, or Ballinasloe Medical Academy, and another proportion of the class will complete all of semester 2 in one of the academies.

See section above for **General Regulations** regarding examinations. See School of Medicine Undergraduate Medical Programme **Curriculum Document** for assessment details for each module. Further information and guidance is available on **Blackboard**.

FIFTH MEDICAL YEAR /FINAL YEAR (5MB)

Semester 1	Semester 2
MD542 Advanced Clinical Theory (20)	
MD540 Advanced Clinical Diagnosis (20)	
MD541 Advanced Clinical Management (20)	

The teaching in Year 5 comprises three modules as listed above. These are delivered in an integrated design with input from medicine, surgery, anaesthesia and radiology, and will cover essential topics in nine clinical disciplines. These modules aim to enhance the students knowledge of clinical practice, and builds on the Year 3 modules: Foundations of Clinical Theory, Foundations of Clinical Diagnosis, and Foundations of Clinical Management incorporating the teaching of Professionalism seamlessly within the following strands. These Year 5 strands are as follows:

	Year 5 Strands (core and specialty)
1	Cardiovascular studies
2	Gastrointestinal
3	Respiratory, Preoperative, Critical cares Medicine
4	General medicine and Surgery
5	Cancer and Imaging studies
6	Musculoskeletal studies
7	Renal-Urology
8	Dermatology, Plastics and Maxilo-facial surgery

Each strand is delivered in 3 or 4 weeks in Semester 1 and Semester 2, and the overall aim is to equip the final medical student with the necessary skills to the standard of a pre-registration medical doctor in the areas of knowledge, application and interpretation, clinical and diagnostic skills, communication skills, professional behaviour, scholarly traits in accordance with the Medical Council guidelines for undergraduate medical training. In Semester 1 each strand is delivered in 4-week rotating blocks at Galway University Hospitals and the Affiliated Hospitals. In semester 2 each strand is delivered over 3 weeks at Galway University hospitals. The teaching of Professionalism is incorporated into each strand.

See section above for **General Regulations** regarding examinations. See School of Medicine Undergraduate Medical Programme **Curriculum Document** for assessment details for each module. Further information and guidance is available on **Blackboard**.

STUDENT ASSESSMENT ON THE UNDERGRADUATE MEDICAL PROGRAMME

A wide variety of assessment strategies are employed at successive stages throughout the programme. Using a range and diversity of techniques, assessment is matched to the learning outcomes for each module (which are detailed below). Assessment is designed to assess students' theoretical knowledge, clinical skills and professional behavior, to ensure they meet the necessary competencies for professional practice as a doctor. Assessment techniques include written examination, practicals, projects, case studies, and clinical examinations. Assessment is carried both during and at end of modules. Formative assessment is also used to support learning process.

See

- Section above for **General Regulations** regarding examinations.
 - **School of Medicine Undergraduate Medical Programme Curriculum Document** for details of assessment for each module
 - Relevant Blackboard sites for further details and guidance
-

SYLLABUS OF PROGRAMMES OF INSTRUCTION FOR THE DEGREES OF MB BCh BAO:

MODULE DESCRIPTIONS

Title, code, credit weighting (ECTs), description and learning outcomes

FOUNDATION YEAR (OMB) MODULES

Semester 1	Semester 2
BO101 Biology (15)	
CH120 Chemistry (15)	
PH101 Physics (15)	
MD103 Introduction to Medicine (15)	

CH 120 CHEMISTRY: MOLECULAR SCIENCE (15 ECTS)

This module provides a broad and targeted introduction to Chemistry for students who require a full two semester foundation course, who are pursuing medicine related courses and who will not be continuing with Chemistry in higher years. The module assumes no prior knowledge of Chemistry, though a significant proportion of those taking it (perhaps 50%) will have a level 5 qualification in Chemistry. The course addresses the particular needs of these students through the use of examples and applications related to biology and medicine. The course is based on the concept that an appreciation of how materials (including biomaterials) behave and function on the macroscopic level requires an understanding of their molecular basis. The course is designed to provide an introduction to the molecular world in terms of its structures and the factors that affect how these structures behave. This approach is reflected in both the lecture and the laboratory components of the course

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Recognize the molecular basis of biological and medicine related processes and phenomena
- 2 Explain the macroscopic behaviour of matter in terms of molecular scale forces and effects
- 3 Recognize the link between chemical changes and environmentally important effects such as global warming and ozone layer depletion
- 4 Carry out calculations relating to the material balance in chemical processes
- 5 Recognize the factors that control the rates of chemical processes and of the importance of chemical and enzymic catalysis
- 6 Carry out basic thermodynamic calculations relating to enthalpy, entropy and free-energy in chemical and biochemical processes
- 7 Recognize how basic chemical principles control the behaviour of

- biological molecules
- 8 Recognize the importance of chemical principles in relation to medicine related issues: magnetic resonance imaging, mechanism of action of pharmaceuticals such as aspirin at a molecular level.
 - 9 Recognize the chemical basis of many biomedical processes
 - 10 Recognise the importance of carbon based molecules and their importance in terms of the petrochemical, chemical and pharmaceutical industries
 - 11 Apply the scientific method in terms of problem solving
Laboratory
 - 12 Carry out basic qualitative analyses in the laboratory relating to aqueous solutions of the most important anions and cations, and to organic molecules.
 - 13 Use appropriate laboratory techniques and equipment to synthesise, separate and purify chemical compounds
 - 14 Use titrimetry and physicochemical techniques for quantitative analysis and in the determination physicochemical properties
 - 15 Implement safe work practices in a chemistry laboratory, to include an awareness of common hazards and appropriate safety precautions
 - 16 Carry out practical experiments in the laboratory, analyse the results and write technical reports on same

PH 101 PHYSICS (15 ECTS)

This module lays a broad foundation in physics, both for students who will continue to study physics in subsequent years of their degree programme and for those who will instead continue to study other subjects. No prior knowledge of physics is assumed, though a significant minority of students (perhaps 33%) will have a Leaving Certificate qualification in physics. The level of mathematics required is simple algebra and trigonometry.

The general aim of this module is to equip the learner with knowledge of the basic rules of nature that physical systems follow. The student will learn how to express these rules in simple mathematical form and to apply these rules to solve problems. They will also learn how to make measurements in the physics laboratory which can test the rules. They will acquire transferable skills in measurement, numeracy and analysis which will be useful across a broad range of scientific and medical disciplines.

Learning Outcomes:

On successful completion of the module you will be able to

- 1 Understand and explain basic physical principles related to topics such as motion, forces, energy, heat, waves, electricity, light, atoms and radiation.
- 2 Identify basic physical principles governing the behaviour of simple systems.
- 3 Describe physical processes using simple equations and solve numerical problems.
- 4 Make measurements in the physics laboratory.
- 5 Record and analyze experimental data and draw conclusions based on these data

BO101 BIOLOGY (15 ECTS)

Biology is an integrative and interdisciplinary field that aims to investigate the dynamic and complex nature of living systems in terms of their molecular components and the interactions between organisms and their biotic and abiotic environment. This module will introduce students to fundamental concepts of biology. The course is intended to provide the necessary biological background to allow learners in general and specialised Science courses, Foundation Medicine and Biomedical Engineering to progress into more specialised topics in later years. First, the nature of biomolecules and the basis for cellular form and function are discussed. Then students are introduced to the structure, function, diversity and impact of plants, animals and microorganisms. This module aims to provide learners with a basic knowledge of the structure and function of biomolecules and cells. The module also seeks to provide learners with an understanding of the evolutionary process and the range of interactions between organisms and their environment. Finally, the module seeks to enable learners to gain an appreciation of major human impacts on the biosphere and the role of biological sciences in societal development.

Learning Outcomes:

On successful completion of the module you will be able to

- 1 Explain the structure and function of biomolecules
- 2 Describe the form and function of cells
- 3 Discuss organism diversity and evolutionary mechanisms
- 4 Relate basic principles of organismal interactions
- 5 Critically evaluate major human impacts on the environment
- 6 Understand the role of biological sciences in societal development

MD103 INTRODUCTION TO MEDICINE (15 ECTS)

The module consists of two components: Early Patient Contact and Contemporary Topics in Medicine. The module has been designed to maximise students' exposure to real patients and to clinical practice at an early stage in your professional development.

Contemporary Topics in Medicine component: Section 1 of this course will start with an introduction to Human Form, Function and composition: Introductory lectures in Anatomical terminology, Physiology and Medically relevant Biochemistry. It will also include an Introduction to Medical Imaging. The next section will examine aspects of Biomechanics and how understanding interactions with the physical environment aid in our understanding of various injuries to the musculoskeletal system. Section will allow a downward vertical integration of some of the clinical disciplines by providing an introduction to the Clinical Disciplines including, Surgery, Medicine, Anaesthesiology, General Practice, Psychiatry and Introduction to the Allied Health Sciences (Nursing/Occupational Therapy/SLT). The final section of the course consists of Contemporary Topics in Medical Research including Gene and Stem Cell therapy, Aging, Antibiotic Resistance, Tissue Engineering, Cellular Imaging and Cancer. This will provide

the student with some basic terminology and exposure to the multifaceted nature of modern medicine.

Learning Outcomes:

On successful completion of the module you will be able to:

Early Patient Contact

- 1 Demonstrate an approach to interaction with patients commensurate with recognised professional standards of medical etiquette.
- 2 Demonstrate an ability to take a basic history from a patient and to reflect on the information obtained.
- 3 Demonstrate an ability to work as part of a group in searching, appraising and synthesising information related to an assigned clinical topic.
- 4 Demonstrate an ability to present a case history and a PowerPoint presentation on an assigned topic.
- 5 Have a basic understanding of the structure and operation of the Irish health service.
- 6 Show an understanding of the roles of different members of a multidisciplinary healthcare team.
- 7 Demonstrate a basic understanding of the global impact of infectious disease and the burden of imported tropical diseases in Ireland.
- 8 Discuss ways in which healthcare professionals can promote health and prevent disease.
- 9 Demonstrate ability to record and interpret a patient's vital signs.
- 10 Demonstrate an awareness of the importance of observation in making bedside diagnoses in clinical medicine.
- 11 Demonstrate an ability to practice hand-washing to a standard that complies with hospital infection control policies.
- 12 Demonstrate an ability to assess a patient's pulse and respiratory rate and to measure a patient's blood pressure using a sphygmomanometer

Contemporary Topics in Medicine

- 13 Demonstrate awareness of basic Anatomical/Physiological and Biochemical Terminology.
- 14 Have a basic understanding of Human Biomechanics in relation to Connective Tissues including Bone and Cartilage.
- 15 Demonstrate an awareness of the pivotal role of the Physical sciences in Medical imaging.
- 16 Demonstrate a basic understanding of the Importance of the Basic sciences in modern therapeutic approaches and challenges.

FIRST MEDICAL YEAR (1MB) MODULES

SEMESTER 1	SEMESTER 2
MD137 Principles of Physiology (10)	MD121 Cardiovascular System (5)
	MD122 Respiratory System (5)
MD138 Biomolecules, Metabolism and Energy	MD124 Gastro Intestinal System (5)
MD1101 Basics of Body Structure/ Musculoskeletal System (10)	MD123 Renal System (5)
	MD140 Metabolism, Nutrition and Health (5)
MD139 Medical Professionalism 1 (10)	

MD137 PRINCIPLES OF PHYSIOLOGY (5 ECTS) *

This module is an introduction to fundamental principles of physiology covering aspects of maintenance of cellular homeostasis, cell communication, the blood system and the immune system. At the end of this module the student should know and understand;

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Understand basic design of the organ systems of the body
- 2 Display an understanding of the fluid compartments of the body, composition, properties and clinical significance
- 3 Understand the mechanisms whereby substances are transported in and out of cells and its relevance to absorption in the gut and the kidney.
- 4 Understand the fundamentals of body pH regulation and its clinical significance
- 5 Demonstrate detailed knowledge of the role of second messengers in various cellular responses
- 6 Understand the endocrine system and hormonal regulation
- 7 Understand blood composition and function including both cells and plasma; this should include formation of blood cells, haemoglobin, blood groups, blood clotting, blood indices and blood disorders
- 8 Understand the fundamentals of immunity, including structure and function of the white blood cells and both cellular and humoral immunity
- 9 Describe physiological basis of nerve and muscle activity
- 10 Understand how nerve impulses are generated and propagated, including the role of ion channels and the physiology of a typical chemical synapse.
- 11 Give some key examples to illustrate the chemical diversity of neurotransmitter molecules.
- 12 Understand the structure and function of skeletal, smooth & cardiac muscle, how these muscle types contract and the role of calcium.

- 13 Describe skeletal muscle fibre types, metabolism, and contractile parameters.
- 14 Have knowledge of muscle fatigue, adaptation to physiological stress /work
- 15 Understand how the autonomic nervous system works in regulating cellular and organ function

MD138 BIOMOLECULES, METABOLISM AND ENERGY (5ECTs)

This module introduces students to the basic biochemical definitions, concepts and mechanisms that relate to biomolecules, metabolism and energy and that are important in normal cell and tissue functioning. Through study of clinical correlations, the module also highlights how defects in these cellular biochemical processes can lead to human disease. In addition, the students will practice basic biochemistry methods and work collaboratively during laboratory practical sessions.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Memorise key biochemical definitions relating to basic concepts of biomolecules, metabolism and energy
- 2 Describe the structure and explain the function of the four major types of biomolecules (proteins, nucleic acids, lipids and carbohydrates)
- 3 Explain the mechanisms of cellular transmission of information
- 4 Explain the roles and functions of proteins
- 5 Describe the role of key metabolic pathways and their controls and demonstrate an integrated understanding of their functions
- 6 Illustrate with specific examples how interference with or defects in biochemical pathways impact on human health
- 7 Explain biochemical techniques and methods used to identify biochemical defect and reach a clinical diagnosis
- 8 Participate in biochemistry laboratory practicals by collaborating with peer and produce a laboratory report analyzing results obtained

MD1101 Basics of body structure/musculoskeletal system (10 ECTs)

The module is aimed at giving a general introduction on the body structure and a more detailed knowledge of the individual components of the musculoskeletal system

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Have command of the medical/anatomical terminology
- 2 Have an overview of the general body structure including body compartments and the layers of the body
- 3 Have a clear understanding on the general structure of the Musculoskeletal, cardiovascular, and peripheral nervous systems
- 4 Have detailed knowledge on the skeletal system

- 5 Have detailed knowledge of the functional anatomy of the individual muscles of the body, including their innervation and vascular supply
 - 6 Have a clear understanding of the localisation and topography of the major muscles, blood vessels and nerves of the limbs
 - 7 Have a clear understanding of the histological structure of epithelial, connective, muscular, and nervous tissues
- Have a clear overview of the major developmental steps occurring during the first four weeks of prenatal development

MD139 MEDICAL PROFESSIONALISM (10 ECTS)

The aim of this module is to instill professional behaviour in students from the start of their medical career. Students will develop structured, evidence-based communication skills and learn the basics of near patient testing and the fundamentals of basic patient assessment through workshop and skills practice. Students will learn to analyse the ethical, legal and psychosocial dimensions of clinical practice and will develop an understanding of statistical analysis and evidence-based medicine.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Explain the role of communication skills in the doctor-patient relationship.
- 2 Define verbal and non verbal communication
- 3 Explain the importance of rapport and active listening in the consultation and identify behaviour which illustrate this
- 4 Demonstrate an ability to test and interpret urine, and to interpret a normal chest X-ray or a chest X-ray with basic cardiac or respiratory abnormalities.
- 5 Demonstrate how a shared understanding of the presenting complaint in mental, physical, psychological and social terms is reached, with particular focus on information-gathering skills.
- 6 Demonstrate an ability to measure blood pressure, pulse rate, body temperature and respiratory rate accurately, and to interpret these findings and explain them to patients.
- 7 Demonstrate an ability to calculate BMI, measure waist circumference and chart biomedical data appropriately
- 8 Demonstrate an ability to test and interpret urine, and to interpret a normal chest X-ray or a chest X-ray with basic cardiac or respiratory abnormalities.
- 9 Demonstrate an ability to apply leads appropriately and to take and ECG reading.
- 10 Display an understanding of the basic principles of medical ethics.
- 11 Analyse the role of ethics in clinical practice.
- 12 Demonstrate an understanding of the importance of patient rights, including the right to give or withhold consent to treatment and the right to confidentiality of personal health information.
- 13 Display a basic understanding of the law governing medical practice in Ireland.
- 14 Explain the impact of the psychological and social determinants of health and illness.
- 15 Describe the role of psycho-social factors in early childhood as predictors of health and illness in adult life
- 16 Identify the processes through which stress influences health and illness.
- 17 Systematically search for, store and use scientific papers related to a specific

topic of interest.

- 18 Categorise various scientific papers in accordance with the 5 existing levels of evidence provided by the Oxford Centre for Evidence-Based Medicine
- 19 Demonstrate a basic understanding of medical statistics.
- 20 Interpret the statistical analysis results of a scientific paper.
- 21 Each special study module will have specific learning outcomes.

MD121 CARDIOVASCULAR SYSTEM (5ECTs)

This module covers the anatomy, physiology and biochemistry of the cardiovascular system with clinical applications in an integrated fashion. The anatomy of the heart and blood vessel distribution is covered, as is the microscopic anatomy of the blood vessels. The genesis of the electrical activity of the heart and the formation of the electrocardiogram is described as is the function of the heart as a pump. The control of arterial blood pressure is described as is the control of the various regional circulations. This module will incorporate a clinical seminar session at the end of the module (one day's duration). It is also envisaged that some clinical lectures will be interspersed throughout the module.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Know and be able to demonstrate the position and function of the heart valves the positions for auscultation of the valves and the positions for placing the chest leads for the ECG.
- 2 Know the Anatomy of the heart and of anatomically and functionally related structures, including why the coronary arteries are important to the functional microanatomy of the heart
- 3 Know the general plan of distribution of arteries, veins, lymphatics
- 4 Know about cardiac cell action potentials and how they give rise to the rhythmical excitation of the heart.
- 5 Know how the spread of cardiac action potentials throughout the heart gives rise to the electrocardiogram (ECG).
- 6 Know the clinical significance of the ECG
- 7 Know the cardiac cycle and the working of the heart as pump
- 8 Know the function and roles of the different parts of the systemic circulation (arteries, arterioles, capillaries and veins).
- 9 Know arterial blood pressure, its clinical significance, how to measure it and its mechanisms of control and the targets for drug intervention.
- 10 Know the control of the various regional circulations
- 11 Discuss the anatomy and pathophysiology related to cardiovascular disease.

MD122 RESPIRATORY SYSTEM (5 ECTs)

This module integrates the structure and function of the respiratory system with clinical applications. The anatomy of the respiratory system and associated structures is covered including the structure of the nose, larynx and upper airway, anterior thoracic wall and the diaphragm. The microscopic structure of all parts of the airway is included. There is brief coverage of the embryonic development of the respiratory system and associated structures. The ventilation of the lungs with air, diffusion of gases in the lungs, the perfusion of the lungs with blood, and gas

exchange in the lungs are then described. Gas transport in the blood and gas exchange in the tissues are covered. The regulation of respiratory ventilation is described. Students are introduced to medical imaging of the respiratory system. It is also envisaged that some clinical lectures will be interspersed throughout the module. Practicals are given which explore and reinforce the material covered in lectures.

Learning Outcomes

On successful completion of the module you will be able to:

- 1 Explain the general plan of the functional anatomy of the respiratory system
- 2 Be able to demonstrate the positions of the pleurae and lungs and their relations during normal and strenuous breathing and of structures anatomically and functionally related to them.
- 3 Describe the anatomy of the intercostal spaces and the diaphragm and the functional anatomy of ventilation.
- 4 Understand the principles underlying an examination of the lungs including the interpretation of routine radiographs and MRI scans.
- 5 Explain the role of the respiratory system in the control of blood gases and pH, including how normal levels are maintained and the causes and consequences of disturbances.
- 6 Describe the microscopic structure of the airways and lungs and understand how structure and function are interrelated
- 7 Describe the development of the trachea, lungs and pleura and know the most common developmental anomalies
- 8 Outline the factors that govern alveolar ventilation in health and disease.
- 9 Understand the peripheral and central mechanisms involved in controlling respiration.
- 10 Discuss the anatomy and pathophysiology related to respiratory disease.

MD124 GASTRO-INTESTINAL SYSTEM (5 ECTS)

This module covers the structure and function of the gastrointestinal system and some clinical applications of this knowledge. The Gross Anatomy of the GIT is covered along with aspects of embryology and histology. Aspects of GIT motility, digestion and absorption of nutrients and their control are considered along with the clinical importance of enzymes and GIT secretions. The role of the accessory organs of digestion is described. GIT reflexes such as vomiting and defecation are covered. Clinical lectures may be presented from time to time.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Know and be able to demonstrate the surface projections of clinically relevant components of the GIT
- 2 Know the macro and micro anatomy of the main elements of the GIT
- 3 Have an understanding of the importance of sphincteric competence in the GIT
- 4 Understand the four key functions of the GIT

- 5 Understand how these functions are regulated
- 6 Understand the biochemical mechanisms by which proteins, carbohydrates and fats are digested and absorbed by the GIT.
- 7 Understand how defects in biochemical processes can lead to diseases of malabsorption.

MD123 Renal System (5 ECTs) ^

This module covers the structure and function of the renal system with clinical applications in an integrated fashion. The development, anatomy and histology of the kidney are described as is the anatomy of the pelvic floor. The formation of urine is covered in terms of the underlying processes of renal blood flow, glomerular filtration and tubular absorption and secretion and their local control. The control of salt and water, pH balance and the medical importance of these processes are indicated. The anatomy and mechanism of the micturition reflex is described. Students are also introduced to medical imaging of the kidney. It is also envisaged that some clinical lectures may be interspersed throughout the module

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Know and be able to demonstrate the positions of the bladder, urethra, rectum and anal canal.
- 2 Know the macro and micro structure of the kidney, ureter, urinary bladder and urethra.
- 3 Know the neuroanatomical basis of urinary incontinence.
- 4 Be familiar with the medical imaging of the urinary system.
- 5 Understand the dynamics of renal blood flow regulation
- 6 Understand the special features of the renal blood supply which adapt the organ for filtration and reabsorption and how blood flow and GFR can be measured
- 7 Describe the transport properties of the nephron and how these relate to the reabsorptive and excretory roles of the kidney.
- 8 Understand the role of the kidneys in regulating body fluid osmolarity, ECF volume and acid base balance and the methods of investigation used to examine these processes.
- 9 Discuss the anatomy and pathophysiology of processes related to renal disease.

MD140 Metabolism, Nutrition and Health (5 ECTs)

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 obtain and use the current scientific knowledge on the normal function of the human organism and its organs and use this knowledge to explain health problems and pathogenesis of diseases
- 2 Be familiar with clinical reasoning, the use of evidence and critical thinking in the process of decision making and how research and scientific

SECOND MEDICAL YEAR (2MB) MODULES

Semester 1	Semester 2
MD224 Central Nervous System (10)	MD201 Health and Disease 2 (15)
MD214 Introduction to Pharmacology (5)	
MD210 Genes, Gametes and Embryos (5)	MD204 Drugs and Disease (5)
MD206 Molecular Medicine (5)	MD209 Multi Organ Failure (5)
MD202 Medical Professionalism 2 (10)	

MD224 CENTRAL NERVOUS SYSTEM (10 ECTS)

Module examining the structure, organisation and functions of the spinal cord and the different parts of the brain and introducing students to the clinical disciplines of neurology, psychiatry and radiology. Topics covered include: Somatosensory systems and pain circuitry; Special sense systems; Motor system; Vestibular system; Language implementation system; Limbic system; The control of appetite, thirst, thermoregulation; The sleep cycle; Learning and memory.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Have a comprehensive understanding of the structure and organisation of the central nervous system; brain and spinal cord
- 2 Be familiar with clinical reasoning, the use of evidence and critical thinking in the process of decision making and how research and scientific methodologies contribute to evidence based medicine

MD214 INTRODUCTION TO PHARMACOLOGY (5 ECTS)

This module provides an introduction to Pharmacology, and serves as a foundation to aid the understanding of the drug treatment of disease. Topics include an overview of the various molecular targets for drugs, dose-response relationships, pharmacokinetics (drug absorption, distribution, metabolism and elimination), drugs acting on the autonomic nervous system (cholinergic and adrenergic, drug discovery and clinical development and drug safety.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Describe the general mechanisms of action of drugs at a molecular, cellular, tissue and organ level.
- 2 Describe the ways in which drug actions produce therapeutic and adverse

- effects, and describe the receptor as a target of drug action and related concepts such as agonism, antagonism, partial agonism and selectivity.
- 3 Describe the mechanisms of drug absorption, distribution, metabolism and excretion, and the concepts of volume of distribution, clearance and half-life and their clinical relevance.
 - 4 Identify the pharmacokinetic factors determine the optimal route, dose and frequency of drug administration and the factors that determine inter-individual variation in drug response.
 - 5 Describe the components of the autonomic nervous system and its effects on physiological functions
 - 6 Describe the different ways in which drugs can affect cholinergic and noradrenergic neurotransmission and how such approaches have yielded clinically useful drugs
 - 7 Describe the drug development process including clinical trials (Phase I to IV), and the drug approval process. In addition, to have an appreciation of the requirements of good clinical trial design and consent, ethics, bias, statistics, dissemination of information.
 - 8 Describe the problems associated with drugs such as the development of dependence and tolerance to drugs, adverse drug reactions, poisoning and the principles of counteracting the effects of toxic substances after ingestion.

MD210 GENES, GAMETES AND EMBRYOS (5 ECTS)

This module, building on previous knowledge of DNA structure, replication and endocrinology, will equip students with a knowledge of the core concepts in reproduction and genetics. Medical students will be introduced to the principles of modern genetics and its application to the understanding and treatment of inherited disease. Clinical context, ethical and professional issues and genetic counselling will be addressed in addition to anatomical and physiological issues related to reproduction.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Have a comprehensive understanding of the main principles of modern medical genetics and cytogenetics and its relevance to modern medicine.
- 2 Have a basic understanding of chromosome analysis and the causes and consequences of cytogenetic disorder and its relevance to modern medicine.
- 3 Have a basic understanding of the role of chromosome rearrangement in human leukemia and cancer
- 4 Have an appreciation of the practical, moral and ethical issues associated with genetic testing, prenatal diagnosis and genetic counseling in modern medicine and some insight into the personal impacts of inherited disease/predisposition to disease for individuals, families and society.
- 5 Know the anatomy and physiology of the male and female reproductive systems as well as the hormonal and nervous control of human reproduction
- 6 Have sufficient anatomical knowledge to understand the anatomy of urinary and faecal continence, of taking cervical smears and of pelvic examination and the anatomical basis of passing a urinary catheter in the male.
- 7 Have an appreciation of anatomical and physiological changes that occur during pregnancy and the anatomy underlying anesthesia during childbirth.

- 8 Know the basis of sexual determination of sex, the control of parturition and lactation

MD206 MOLECULAR MEDICINE (5 ECTS)

24 lectures (3 x 3 lectures from 8 lecturers) covering Signalling pathways; Molecular Diagnosis; Cell Cycle; DNA Repair; Oncogenes & Tumour Suppressors; DNA Damage Response & Cancer; Cell Biology; Cell Death; Future Therapies and, finally, Drug Discovery & Small Molecules.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Understand the general concepts of signal transduction
- 2 Be familiar with chemical messengers, such as hormones, steroids, growth factors and eicosanoids, and their cellular receptors
- 3 Understand the general concepts of cancer and the DNA damage response
- 4 Be familiar with the fundamental principles of the cell cycle, its control and relevance to cancer
- 5 Understand the cell biology of cancer, including the principle cellular hallmarks of cancer and their molecular basis
- 6 Be familiar with the mechanisms of programmed cell death and their relevance to cancer
- 7 Understand the principles and development of current and potential therapeutic strategies, especially chemotherapeutic strategies against cancer
- 8 Be familiar with some of the technological advances uncovering novel molecules and intermolecular relationships that are medically relevant

MD202 MEDICAL PROFESSIONALISM 2 (15 ECTS)

This module introduces students to clinical history-taking and physical examination in respect of the cardiovascular, gastrointestinal, genitourinary, nervous and musculoskeletal systems. Students will be able to apply communication, history-taking and examination skills during a clinical encounter. Students will learn to analyse the ethical, legal and psychosocial dimensions of clinical practice and will develop an understanding of the principles of evidence-based medicine and statistical analysis

Learning Outcomes:

On successful completion of the module you will be able to:

1. Take a medical history with regard to the following systems: Cardiovascular system, Respiratory system, Gastrointestinal system, Genitourinary system, Nervous system and Musculoskeletal system.
2. Perform a clinical examination with regard to the following systems: Cardiovascular system, Respiratory system, Gastrointestinal system, Genitourinary system, Nervous system and Musculoskeletal system.
3. Demonstrate the application of communication skills in accordance with the

Calgary Cambridge Consultation Model.

4. Carry out basic medical procedures, which might include application of a sling, administration of an intramuscular injection, etc.
5. Demonstrate an ability to identify ethical issues arising in clinical practice.
6. Demonstrate an understanding of the role played by values in the clinical encounter.
7. Demonstrate an understanding of the importance of shared decision-making in clinical practice.
8. Demonstrate knowledge of how doctors are regulated and an awareness of the legislation governing clinical practice.
9. Critically evaluate the role of psychological and social factors in treatment adherence for chronic illness
10. Describe the importance of health literacy for patients and health care providers and how it can be promoted
11. Appraise the theories and models of health behaviour change and their application in practice
12. Systematically search for, store and use scientific papers related to a specific topic and cite this information while writing a paper, essay or case report.
13. Categorise various scientific papers according to the 5 existing levels of evidence provided by the Oxford Centre for Evidence Based Medicine and use the evidence to promote best practice in clinical decision-making.
14. Demonstrate knowledge of inferential statistics.
15. Interpret the statistical analysis results of a scientific paper.
16. Each special study module will have specific learning outcomes

MD201 HEALTH AND DISEASE (15 ECTS)

The module aims to introduce to students the various disciplines, key concepts and knowledge that underpin the development, diagnosis and management of clinical conditions. The module will highlight the interplay between molecular, cellular, microbiological, pharmacological, environmental, epidemiological and social mechanisms in disease development and progression. Principles of health promotion and disease prevention at individual and population levels will also be introduced.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Discuss the interplay of molecular, cellular, microbiological, pharmacological and environmental factors in the causation of different diseases, and the clinical relevance of such underlying mechanisms.
- 2 Describe the mechanisms, aetiologies and responses relating to cell injury, death, growth and neoplasia, as well as the subsequent healing, repair and/or neoplastic processes
- 3 Explain the basic alterations of haemodynamic processes including thrombosis, ischaemia, infarction and shock
- 4 Explain the principles and application of biomedical statistical methods in population health and clinical settings
- 5 Discuss the functions of public health and health promotion, including epidemiology, healthcare needs assessment, disease prevention relating to both individual and population health services, and wider determinants of health.

- 6 Discuss pathobiology, aetiology, diagnosis, as well as general principles in surveillance, prevention, control and management of infectious diseases
- 7 Explain the principles and application of infection prevention/control measures and rational use of antimicrobial agents in healthcare settings
- 8 Describe the pathobiology, microbiology, pharmacology, surveillance and prevention of cardiovascular disorders including atherosclerosis, myocardial infarction, valvular disorders, cardiomyopathy, cardiac failure and hypertension
- 9 Describe the pathobiology, microbiology, surveillance and prevention of respiratory disorders including asthma and other allergic disorders, pneumonia, tuberculosis, inflammatory disorders, COPD, cystic fibrosis and neoplasia.

MD209 MULTI ORGAN FAILURE (5 ECTS)

The students are introduced to core concepts required for an understand of the causes and effects of failing organs, including heart, liver, kidney, central nervous system and lung. Lectures are provided on essential physiology of the relevant organs (Dept of Physiology) followed in a matched fashion by lectures on clinical concepts (clinical lecturers). A self-directed learning (SDL) task, focuses on a clinical scenario that illustrates the concepts introduced in the lectures.

Learning Outcomes:

On successful completion of the module students will be able to:

- 1 Explain essential aspects of physiology of major organ function pertinent to: heart, liver, kidney, Central Nervous system and lung
- 2 List common diseases that contribute to failure of these organs
- 3 Describe the clinical manifestations of organ failure
- 4 Explain these clinical manifestations as consequences of deranged physiology
- 5 Describe basic aspects of clinical management of the failing organ
- 6 Understand the clinical concept of Shock
- 7 Provide more detailed examples of specific clinical conditions highlighted in the SDL tasks

MD204 DRUGS AND DISEASE (5 ECTS)

In this module, students will learn the basic Pharmacology & Drugs used in the treatment of a variety of disorders including Endocrine, Immunological, Respiratory, Gastrointestinal, Nervous System and Cancer. The content covers not only basic Pharmacology of important drug group used in the treatment of patients with those diseases, but also clinically relevant topics.

Learning Outcomes:

On successful completion of the module you will be able to:

- 1 Understand the Pharmacology of drugs used in the treatment of Endocrine, Gastrointestinal, Respiratory, Immunological, Nervous System, Pain, and Oncological Diseases
- 2 Understand the mechanisms of action and important side effects in the use and administration of drugs
- 3 Knowledge of how those drugs interfere with mechanisms of disease.
- 4 Important drug interactions
- 5 Important drug side effects.

THIRD MEDICAL YEAR (3MB) MODULES

Semester 1	Clinical Phase Semester 2
MD302 Health & Disease II (15)	MD314 Foundations of Clinical Theory (10)
MD304 Global Health and Development (5)	MD312 Foundations of Clinical Diagnosis (10)
MD316 Professionalism – Core Clinical Skills (10)	MD 313 Foundations of Clinical Management (10)

MD 316 PROFESSIONALISM – CORE CLINICAL SKILLS (10 ECTS)

This module builds spirally upon the learning acquired in proximal Professionalism modules in Years 1MB3 and 2MB3. Large group teaching includes a lecture series covering history-taking, physical examination, ECGs and a weekly case conference. Small group teaching includes clinical reasoning tutorials, practical procedural skills sessions, physical examination workshops, evidence-based medicine workshops and medical imaging. Students rotate through a ward-based clinical clerkship.

Learning Outcomes:

On successful completion of the module the learner will be able to:

- 1 Take a thorough history from a patient and present the findings to a doctor.
- 2 Recognise the physical signs which accompany a wide range of medical conditions.
- 3 Demonstrate an ability to recognise added heart sounds, murmurs and adventitious breath sounds.
- 4 Apply a knowledge of history-taking and physical examination to the analysis of clinical case studies.
- 5 Demonstrate an ability to interpret laboratory investigations, clinical and radiographic images, and 12-lead ECGs.
- 6 Demonstrate a detailed understanding of total cardiovascular risk estimation.
- 7 Critically analyse published research articles, in terms of study objectives, design, methodology, statistics and limitations.
- 8 Demonstrate an ability to perform the following practical procedural/physical examination skills in a simulated clinical environment:
 - Management of choking
 - Use of an automated external defibrillator

- Digital rectal examination
- Passage of a nasogastric tube
- Examination of the female breast

MD 320 Health and Disease II (15 ECTS)

Students will build on the knowledge of H&D module I to understand the common disease processes affecting different organ systems and their clinical implications. They will learn to apply these principles to common clinical problems. Students will build on the knowledge of biomedical science achieved to develop a basic understanding of the principles of forensic medicine. They will become familiar with the role of the coroner, the role of the autopsy and the inquest.

Learning Outcomes:

On successful completion of the module the learner will be able to:

- 1 Explain pathobiology and microbiology of diseases affecting central nervous system including the causes and effects of raised intracranial pressure, stroke, head trauma, infection and neurodegenerative diseases
- 2 Explain pathobiology and microbiology of diseases of the gastrointestinal system including infections, inflammatory conditions, common malabsorptive disorders, benign and malignant diseases
- 3 Discuss diseases of hepatobiliary system and pancreas including infections, inflammatory disorders, inherited diseases, neoplasms and organ failure
- 4 Discuss haematological disorders including anaemias, haematological malignancy and pathology of the lymph node
- 5 Explain pathobiology of the breast and endocrine system; screening services
- 6 Explain pathobiology and microbiology of the skin and musculoskeletal system
- 7 Discuss the functions of public health and health promotion, including topics of epidemiology, healthcare needs assessment, and prevention of diseases related both to individual and population health services and wider determinants of health
- 8 Explain principles and practical aspects of infection control in the health care setting and use of antimicrobial agents
- 9 Discuss the principles of prevention, control and management and aetiology of major infectious diseases
- 10 Explain basic principles of forensic medicine in relation to common causes and signs of injury, disease and death.
- 11 Describe the role of the coroner, recognise the circumstances in which death should be reported to the coroner, discuss the role of the autopsy and the inquest
- 12 Describe the process of identification of dead, the importance of accurate certification of death and be familiar with the signs of violence and injury/trauma.
- 13 Establish cause of death in a given case, i.e. whether it is natural, accidental, homicidal or suicidal and recognise the signs of unnatural death, including the effects of various drugs and toxins

MD304 Global Health and Development (5 ECTS)

Global health can be defined as 'health problems, issues and concerns that transcend national boundaries; that may be influenced by circumstances or experiences in other countries; and that are best addressed by cooperative actions and solutions'. This module provides an introduction to key concepts in understanding the challenges of human health and development from a global perspective. The content focuses on social and economic development as it relates to global health.

Learning Outcomes:

On successful completion of the module the learner will be able to:

- 1 Global Burden of Disease**
discuss the main global causes of morbidity and mortality globally including major infectious, non-communicable and chronic diseases and injuries; the impact of travel and migration on diseases seen in Ireland;
recognise issues related to global health security and addressing the causes and control of public health risks from epidemic prone diseases and climate change.
- 2 Socioeconomic and Environmental Determinants of Health**
demonstrate awareness of social, economic, political, environmental and gender determinants of health disparities;
recognise the impacts of globalisation, poverty and widening socio-economic inequalities as determinants of health;
understand the concepts of development, poverty, economic and social development, and the right to health.
- 3 Health Systems**
discuss the components of a health system and how health system structures and functions vary;
understand how global trends in healthcare practice, commerce and culture contribute to health and the quality and availability of healthcare;
be aware of the difficulties faced by health services in resource poor settings and the challenges of strengthening health systems, ensuring adequate human resources for health and equitable access.
- 4 Health Implications of Travel and Migration**
understand risks associated with travel and migration
describe how travel and trade contribute to the spread of disease
know where to identify sources of information for medical advice for international travellers.
- 5 Global Health Governance**
demonstrate awareness of the complexity of global health governance including the roles of international agencies such as WHO and other UN agencies, civil society organisations and new partnerships for health; recognise how health related research is conducted and governed.
- 6 Human Rights and Ethics**
understand the concepts of respect for the rights and equal value of all people

without discrimination, and to provide compassionate care for all;
 examine how international legal frameworks impact on health-care delivery in Ireland; discuss and critique the concept of the right to health;
 consider some of the health issues faced by migrants including refugees and asylum seekers;
 recognise the role of doctors as advocates for patients, including prioritising health needs and adhering to codes of professional conduct.

7 Culture and Health

demonstrate understanding of the importance of culture and its influences on behaviour;
 communicate and work effectively with people from different ethnic, religious and social backgrounds.

SEMESTER II

MD314 FOUNDATIONS OF CLINICAL THEORY (10 ECTS)

This module complements Foundations in Clinical Diagnosis and Clinical Management in preparing the student to acquire and demonstrate the appropriate outcomes and competencies of the Undergraduate Medical Programme, with emphasis on the fundamental principles underlying patient care, diagnosis and management. This module is delivered in Semester 2 of the third medical year as 4-week clinical placements in core clinical specialities. This is supported by structured teaching activities.

Learning Outcomes

On successful completion of this module the student should be able to:

1. Describe the fundamental basic science theory as applied to the clinical diagnosis and management of diseases in the following disciplines:
 - i. Gastro-intestinal Studies: Cardiovascular Studies
 - ii. Respiratory & Peri-operative/Critical Care
 - iii. General Medicine and General Surgery: Acute Care and Care of the Elderly
2. Explain the theory of the indications and preparations for surgery, and the management of post-anaesthesia and post-operative complications.
3. Explain the theoretical principles of therapeutics as applied in the safe practice of medicine and surgery
4. Apply the principles of evidence-based medicine to patient care to a standard of a third year medical student.
5. Describe the approach to the management of the unwell patient with initial resuscitation as per best practice.
6. Apply the theoretical principles of patient assessment and management in acute and chronic illnesses
7. Discuss the principles of ethical reasoning, compliance with the law, and professional behaviour in patient management to a predetermined standard and the importance of incorporating these principles into one's own practice.
8. Demonstrate the necessary skills as an effective communicator as part of a multidisciplinary team approach in patient care.

MD312 FOUNDATIONS OF CLINICAL DIAGNOSIS (10 ECTS)

This module complements Foundations in Clinical Theory and Clinical Management in preparing the medical student to acquire and demonstrate the outcomes and competencies for the Undergraduate Medical Programme, with an emphasis on the foundations of patient investigation and diagnosis. This module is delivered in Semester 2 of the third medical year in 4 week clinical placements in core clinical specialities. This is supported by structured teaching activities.

Learning Outcomes

On successful completion of this module the student should be able to:

1. Take a history and perform a physical examination of patients to reach a clinical diagnosis/differential diagnosis, demonstrating critical skills at the level of a third year medical student in the following core and specialty discipline
 - i. Gastro-intestinal Studies: Cardiovascular Studies
 - ii. Respiratory and Peri-operative/Critical Care Medicine: Acute Care: Care of the Elderly
2. Develop a structured approach to ordering laboratory and radiological investigations to confirm the most likely diagnosis and develop an understanding as to why these investigations are ordered.
3. Evaluate and interpret evidence from laboratory and radiological investigations.
4. Discuss the limitations, risks, costs and potential side-effects of investigations and their impact on decision making in clinical diagnosis.
5. Apply current evidence based medicine in devising a plan of investigation and interpretation thereof, in clinical diagnosis.
6. Communicate effectively in all areas i.e. with patients, colleagues, health care professionals, and in all media i.e. writing, electronically, by phone, in person, in the practice of medicine.
7. Describe the basic principles of effective multidisciplinary team working and its role in patient diagnosis.
8. Demonstrate the ability under appropriate supervision to perform common procedures including phlebotomy, IV cannulation and ECG recording.
9. Apply principles of ethical reasoning, compliance with the law, and professional behaviour in patient management to a predetermined standard.

MD313 FOUNDATIONS OF CLINICAL MANAGEMENT T (10 ECTS)

This module complements Foundations in Clinical Theory and Clinical Diagnosis in preparing the medical student to acquire and demonstrate the outcomes and competencies of the undergraduate medical programme, with an emphasis on the principles of patient management and care. This module is delivered in Semester 2 of the third medical year as 4 week clinical placements in core clinical specialities and subspecialities. This is supported by structured teaching activities.

Learning Outcomes

On successful completion of this module the student should be able to:

1. Formulate a plan of treatment demonstrating application of principles of patient management in the following disciplines
 - i. Gastro-intestinal Studies: Cardiovascular Studies
 - ii. Respiratory and Peri-operative/Critical Care Medicine: Acute Care: Care of the Elderly

2. Demonstrate the knowledge and skills to devise a management plan for surgical patients during the pre, peri and post-operative phases of their treatment. This includes demonstrating an understanding of consent, risk assessment and postoperative management.
3. Recognise the need and appropriate timing for senior input in the acutely unwell patient.
4. Apply the principles of evidence-based medicine to patient care and become familiar with the principle of critically appraising patient treatments.
5. Discuss the importance of effective multidisciplinary team working in patient management.
6. Communicate effectively in all areas i.e. with patients, colleagues, health care professionals and in all media i.e. writing, electronically, by phone, in person, in the practice of medicine
7. Explain the principles of therapeutics and patient safety to management and evaluate response to prescribed medications.
8. Demonstrate the critical skills necessary for effective decision making and judgements in patient care to evaluate and adapt management plans.
9. Apply the principles of ethical reasoning, compliance with the law, and professional behaviour in patient management to a predetermined standard and understand the importance of incorporating these principles into one's own practice.

FOURTH MEDICAL YEAR (4MB) MODULES

Semester 1	Semester 2
MD420 Primary Care and Mental Health (20)	
MD 422 Women's and Children's Health (20)	
MD421 Advanced Clinical Skills (15)	
	MD409 Special Study Module (5)

Structure and delivery

Year 4 will consist of year-long modules in Primary Care and Mental Health, Women's and Children's Health and Advanced Clinical Skills and a semester 2 SSM. Teaching and assessment will be delivered both in Galway and in medical academies. PCMH and WCH will consist of 8 week rotating attachments in both Semester 1 and 2. ACS will be threaded throughout the modules. Teaching will take the form of clinical placements, lectures, small group tutorials, case studies, case presentations, self-directed learning, communication and clinical skills teaching via observed and video based teaching.

MD420 PRIMARY CARE AND MENTAL HEALTH (20 ECTS)

This module introduces students to the principles and practice of medicine in the community, as well as the knowledge and skills to assess, diagnose and manage the major mental illnesses. During this module students will also acquire knowledge and skills to diagnose and manage diseases of the ear, nose, throat, head and neck.

Students will learn about biopsychosocial risk factors for a range of illnesses presenting to mental health and community services and their multidisciplinary management.

Learning Outcomes

On successful completion of this module the student should be able to:

1. Create and justify case based management plans for primary care and mental illness presentations, which are evidence based and will provide high quality holistic care effectively, within available resources.
2. Recognise and theoretically manage common mental illness, primary care and otorhinolaryngology emergencies.
3. Describe the clinical presentations, epidemiology, aetiology, differential diagnosis and management of common illnesses presenting to mental health services, primary care services or otorhinolaryngology services.
4. Describe the principal mechanisms of action and appropriate use of common general practice and psychotropic medications, the principles of the main forms of psychotherapy and their appropriateness for different patients with mental illness.
5. Demonstrate an awareness of the impact of mental or primary care illness on the patient, their family and the doctor, the resources available to help those with chronic enduring illnesses, the operation and respective roles of multidisciplinary teams, and indications for referral to specialist services.
6. Apply effectively knowledge of principles of health promotion and disease prevention in mental health and primary care medicine in the Irish context, including maximising the social integration of patients with mental health problems and reducing the negative impact of stigma.
7. Demonstrate awareness of the ethical, regulatory and legal frameworks within which the psychiatrist and general practitioner operate, in relation to such issues in their clinical practice.

MD422 WOMEN'S AND CHILDREN'S HEALTH (20 ECTS)

The purpose of the WCH module is to provide students with a solid theoretical foundation in the health of women and children, in addition to the recognition and management of maternal or paediatric illness. Whilst the module is primarily delivered in an acute care setting, GPs share antenatal care, are increasingly involved in the care of children with chronic illness and are often the initial source of contact for the sick child or mother. A solid foundation in WCH is highly valued.

Learning Outcomes

On successful completion of this module the student should be able to:

1. Describe the clinical presentations, epidemiology, aetiology, differential diagnosis and management of common illness presenting in women and children.
2. Diagnose, create and justify management plans for common health presentations in the infant, paediatric, obstetric and gynaecological context, which are evidence based and would provide high quality holistic care effectively, within available resources.
3. Diagnose and theoretically manage emergency presentations in the infant, paediatric, obstetric and gynaecological context, which is evidence-based and would provide high care effectively.
4. Apply appropriate models of care in the maternal and child health context, in a

theoretically informed way, demonstrating a sound knowledge of social and psychological aspects of health and illness (e.g. antenatal care, management of labour, chronic illness in childhood).

5. Apply effectively knowledge of principles of health promotion and disease prevention to case presentations in maternal and child health context. (e.g. childhood immunisation and cervical screening programmes).
6. Demonstrate knowledge of current methods of epidemiological data collection and use in the maternal and child health context. (e.g. perinatal epidemiological data collection and its application to everyday clinical practice.)
7. Apply knowledge of the ethical, regulatory and legal frameworks within which the paediatrician and obstetrician/gynaecologist operate, in relation to such issues in their clinical practice.
8. Demonstrate attainment of her/his personal learning objectives as outlined in portfolio at commencement of module.

MD 421 ADVANCED CLINICAL SKILLS (15 ECTS)

A Clinical Skills Module that will combine the teaching of communication skills, examination skills and basic point of care investigative testing in the child health, women's health, community and mental health contexts. The student will also learn about differential diagnosis, effective patient-doctor management planning, emergency care and patient safety in these contexts.

Learning Outcomes:

On successful completion of the module the learner will be able to:

- 1 Take a history from people of relevant specialties, across a wide range of different scenarios, showing a patient-centred, sensitive, multicultural, structured and thorough approach with demonstration of principles of good communication.
- 2 Undertake a physical examination/mental state examination that are systems-based; appropriate for patient's age, gender and state of mental and physical health, in a rigorous, sensitive, efficient and systematic manner.
- 3 Demonstrate awareness of accepted professional attitude and behaviour with patients, carers and colleagues.
- 4 Evaluate and analyse common investigative test results, and interpret any positive or negative findings therein, and exhibit a further ability to request further appropriate investigations, in the specialty subjects
- 5 Synthesise competently, in the specialist clinical context, all available information gathered from history, examinations and basic investigate testing and formulate a reasonable working diagnosis and differential diagnosis, whilst recognising life threatening conditions that require immediate treatment.
- 6 Explain effectively the diagnosis/prognosis and agree a management plan with the patient, including reference to appropriate additional sources of expertise and information.

MD409 SPECIAL STUDY MODULE (5 ECTS)

Special study modules are self selected project components of individual and group study of scenes that advance students knowledge and skills in topics and themes that are relevant to their personal and professional development as doctors. Students will be asked to select/propose an area of study accompanied by a detailed learning plan. Following an initial screening students will be assigned dedicated supervisors who will help to develop each proposal into a realistic programme over 2 semesters

Learning Outcomes:

On successful completion of the module the learner will be able to:

- 1 Demonstrates a deep and focused knowledge about a particular topic or subject area that relates to his/her personal and/or professional development
- 2 Synthesizes the knowledge skills and experience gained within the period of the SSM in the form of a written presentation assignment/project
- 3 Demonstrates the ability to manage a distributed workload leading the production of a high quality assignment/project and evidence of deep learning in a particular subject

FIFTH MEDICAL YEAR / FINAL YEAR (5MB3) MODULES

Year 5

Semester 1	Semester 2
MD542 Advanced Clinical Theory (20)	
MD540 Advanced Clinical Diagnosis (20)	
MD541 Advanced Clinical Management (20)	

The final academic year is composed of three year -long modules as listed above. In general terms in the first Semester of the Final Medical Year programme (Semester 5.1) the student will complete a number of strands in core clinical specialties, and in the second semester a number of strands in sub-specialties plus/minus core specialties. Each strand is delivered in a 3 or 4-week rotating blocks over the course of Semester 5.1 and Semester 5.2, at both the Galway University Hospitals and the Affiliated Hospitals. The teaching of Professionalism is incorporated into each strand. Each of the modules is linked to learning objectives, which together reflect and closely follow the outcomes for undergraduate medical training as specified by the Medical Council.

MD542 ADVANCED CLINICAL THEORY (20 ECTS)

This module compliments Advanced Clinical Diagnosis and Advanced Clinical Management in preparing the graduating doctor to acquire the outcomes and competencies of the Undergraduate Medical Programme, with emphasis on the theoretical principles underlying patient care, diagnosis and management. Delivery

is in semester & 2 through clinical placements in core clinical specialties and subspecialties and through structured teaching activities. All learning outcomes need to be attained to the standard of a junior doctor prepared for internship.

Learning outcomes

On successful completion of this module the student should be able to:

1. Apply the principles of basic sciences to the clinical diagnosis and management of diseases.
2. Evaluate patients risks in pre and post operative settings.
3. Apply the principles of therapeutics to effective and safe patient management.
4. Apply the principles of evidence-based medicine to patient care.
5. Formulate a plan for the assessment and management of an acutely unwell patient.
6. Apply the principles of patient assessment and management in acute and chronic illnesses.
7. Apply principles of basic sciences to the prescription of oxygen, fluids and blood products
8. Follow hospital guidelines and protocols.

MD540 ADVANCED CLINICAL DIAGNOSIS (20 ECTS)

This module complements Advanced Clinical Theory and Advanced Clinical Management in preparing the graduating doctor to acquire and demonstrate the outcomes and competencies for the Undergraduate Medical Programme, with emphasis on the principles of patient investigation and diagnosis. The module is delivered in semester 1 & 2 through clinical placements in core clinical specialties and subspecialties and by teaching activities. All learning outcomes need to be attained to the standard of a junior doctor prepared for internship.

Learning Outcomes

On successful completion of this module the student should be able to:

1. Formulate a clinical diagnosis/differential diagnosis, based on clinical skills and judgement to the level of a junior doctor prepared for internship.
2. Select appropriate investigations for clinical diagnosis taking account of the limitations and risks.
3. Evaluate and interpret evidence from laboratory and radiological investigations.
4. Apply the principles of evidence-based medicine to clinical diagnosis.
5. Communicate effectively with patients, families, health care professionals in all media (e.g. in person, writing, electronically, by phone) in the practice of medicine.
6. Work effectively as part of a multi-disciplinary team (e.g. closed loop communication, teamwork, leadership, situation awareness, decision-making) utilising all available resources, getting the job done.
7. Apply the principles of ethical reasoning, compliance with the law, and professional behaviour in patient care.
8. Document medical data in a logical and legible manner, consistent with accurate patient records and legal requirements.
9. Recognise and report potentially life threatening iatrogenic conditions (e.g. adverse drug reactions, transfusion reactions, dosing errors and allergic reactions).

MD541 ADVANCED CLINICAL MANAGEMENT

This module complements Advanced Clinical Theory and Advanced Clinical Diagnosis in preparing the graduating doctor to acquire and demonstrate the outcomes and competencies of the Undergraduate Medical Programme, with an emphasis on the principles of patient management and care. This module is delivered in semester 1 & 2 through clinical placements in core clinical specialities and subspecialities and supported by structured teaching activities. All outcomes need to be attained to the standard of a junior doctor prepared for internship.

Learning Outcomes

On successful completion of this module the student should be able to:

1. Formulate a clinical management plan for acute and non-acute patients based on patient assessment and investigations.
2. Manage pre, peri and post-operative patients including consent, risk assessment and postoperative.
3. Be situation aware and call for senior help in a timely manner
4. Re-assess and re-evaluate patient response to treatment, prescribed medications and management plans in ongoing patient care.
5. Work effectively as part of a multi-disciplinary team (e.g. close-loop communication, teamwork, leadership, situation awareness, decision-making) utilising all available resources.
6. Communicate effectively in all areas i.e. with patients, colleagues, health care professionals, and in all media e.g. writing, electronically, by phone, in person, in the practice of medicine
7. Use clinical judgement and decision-making skills in the ongoing clinical management of patients.
8. Apply principles of ethical reasoning, compliance with the law, and professional behaviour in patient care
9. Perform procedural skills required to manage patients
10. Prescribe accurately and safely in all manner of prescriptions e.g. in-patient charts, discharge prescriptions, out-patient prescriptions.

PHD DEGREE WITHIN THE UNDERGRADUATE MEDICAL PROGRAMME

GY501 Medicine (8 year)

From September 2012 students entering the Medical programme have the opportunity also to engage a PhD degree through a period of dedicated research. This is done on an integrated schedule, so that at the end of a period that is likely to involve eight years successfully completed, both the Medical degree and the PhD are conferred.

Students of the Medical programme who are interested will undergo a selection process at the mid-point of their medical studies, which includes an assessment of their academic performance to date and an interview. Limited financial support is provided for the additional three years. The programme and the research themes are agreed at the commencement of the research.

*' All University Calendars are available online on the NUI Galway website: <http://www.nuigalway.ie/>
The detail herein is correct at the time of printing. Change may be approved from time to time and these are incorporated into the online version of the Calendar which may therefore be treated as the Primary Reference.*

BACHELOR OF SCIENCE IN MEDICAL SUBJECTS

Refer to General regulations for the Degrees of MB BCh BAO (NFQ Level 8

Ref; www.nfq.ie)

Students can, if they wish, undertake a B.Sc. Degree in Anatomy, Physiology, Biochemistry, or Pharmacology.

A period of additional study outside of the Medical Degree is required, in general conformity with the regulations for the award of the B.Sc. Degree, as may be prescribed. Admission to the B.Sc. degree programme is subject to the approval of the relevant head of discipline.

The First Medical Examination of the Degree of MB BCh BAO shall be accepted as equivalent to the First University Examination in Science in the case of medical students who propose to proceed to a B.Sc. Degree. Such students are eligible to take the B.Sc. Honours Degree only in the professional subjects, Anatomy, Physiology, Biochemistry, Pathology, Bacteriology and Pharmacology. The standard of entry to the degree shall be Honours at the First, Second or Third University Medical Examination, as appropriate, in the relevant subject.

In addition to attending the course in the professional subjects in the Second and Third Medical Years (and the Fourth Medical Year in the case of Bacteriology and Pathology), students shall be required to take special courses for one session in the subject of the Honours B.Sc. Degree.

Candidates holding the degrees of MB BCh, who wish to proceed subsequently to the B.Sc. Honours Degree in one of the Medical subjects, must have attained Honours standard in that subject, or a related subject, at the last Medical Examination in which he/she sat that subject, or the related subject, and be recommended by the Professor of the subject.

B.MED.SC.

Refer to General regulations for the Degrees of MB BCh BAO (NFQ Level 8 Ref; www.nfq.ie)

The B.Med.Sc. may be awarded to students who have completed the programmes and examinations in the following subjects: Anatomy, Physiology, Biochemistry, Pathology, Bacteriology, Pharmacology and Medical Informatics & Medical Education.

To be eligible for award of the degree candidates must present a minor thesis of not more than 2,000 words embodying a review of the literature or a research project in one of the above subjects.

Students in the Fourth and subsequent years who do not intend proceeding to the MB, BCh, BAO and who wish to be considered for the B.Med.Sc. may be accepted subject to undertaking a period of three months under the Head of one of the specified subjects and submission of a thesis as described above.

SCHOOL OF NURSING & MIDWIFERY

UNDERGRADUATE PROGRAMMES:

The School of Nursing and Midwifery is situated on-campus in a purpose built building. The philosophy underpinning programme design and delivery is student-focused and aims to inculcate values of caring, dignity and respect. The School has a reputation for being vibrant and dynamic and its purpose is to develop innovative, practice focused programmes and to undertake quality research of local, national and international relevance. There are two broad goals: to prepare graduates who are analytical, knowledgeable, responsive and highly skilled and to undertake quality research that effects change and makes a difference to client care and service delivery.

Undergraduate Programmes (NFQ Level 8 awards; ref. www.nfq.ie) provided include

Bachelor of Nursing Science (General), Bachelor of Nursing Science (Psychiatric), Bachelor of Midwifery Science.

Postgraduate Programmes provided include **Full & Part-Time Options**

Professional Credit Award

Certificate In Nursing (Nurse/Midwife Prescribing)

Postgraduate Certificate in Nursing (Specialist Practice)

Postgraduate Certificate (Nursing)

Postgraduate Certificate (Midwifery)

Postgraduate Diploma (Nursing)

Postgraduate Diploma in Nursing (Emergency Care) *Not running in 2013-2014*

Postgraduate Diploma in Nursing (Advanced Practice with Prescribing)

Postgraduate Diploma in Nursing (Child & Adolescent Mental Health)

Postgraduate Diploma in Nursing (Education)

Postgraduate Diploma in Nursing (Gerontology)

Postgraduate Diploma in Nursing (Mental Health, Community & In-Patient Acute Care) Postgraduate Diploma in Nursing (Palliative Care)

Master of Health Sciences (Nursing)

Master of Health Sciences (Nursing/Midwifery Education)

Master of Health Sciences (Advanced Practice Nursing/Midwifery with Prescribing)

Postgraduate Diploma in Nursing (Orthopaedics) *Not running in 2013-2014*

Full Time Options

Postgraduate Diploma in Nursing (Public Health Nursing)

Higher Diploma in Midwifery

Postgraduate Diploma in Nursing (Acute Medicine)

Postgraduate Diploma in Nursing (Perioperative)

Postgraduate Diploma in Nursing (Intensive Care)

Structured Master of Health Sciences (Specialist Nursing)

General regulations for Undergraduate Degrees in Nursing & Midwifery (NFQ Level 8 Ref; www.nfq.ie)

EXPLANATORY NOTE

The Undergraduate Degree Programmes of the School of Nursing and Midwifery at National University of Ireland, Galway are four-year Honours Degrees, which award the: Bachelor of Nursing Science (General), Bachelor of Nursing Science (Psychiatric) and Bachelor of Midwifery Science.

Regulations may be altered periodically. The regulations applying to students are generally those which applied to their programme at the time in which they commenced their studies, unless otherwise specified in the General Regulations hereunder.

These Regulations form a total, individual clauses may be conditioned or varied by the provision of other clauses and cannot be applied in isolation.

The Regulations may also be supported by, or refer to other publications such as the University Undergraduate Prospectus (available on request or by following on-line links for Future Students from www.nuigalway.ie), and the General Calendar of the University <http://www.nuigalway.ie/calendar/>

- I.** Entry to the Degree is limited and is based competitively on the results of the Irish Leaving Certificate examination or its equivalent. The minimum requirement is matriculation, as set out in the Undergraduate Prospectus. [*refer Matriculation Requirements and Additional Requirements in the University Undergraduate Prospectus*]. Requirements arising where the results being presented are from any examination other than the Irish Leaving Certificate are also set out in the Prospectus.

Note: *The competitive cut-off may be significantly higher than the Matriculation standard.*

All Applications are processed through the Central Applications Office. (www.cao.ie)

- II.** Candidates who do not meet the Ordinary Matriculation Requirements as set out in II above, may matriculate on g rounds of Mature Years [*refer Matriculation on Mature Years in the University Undergraduate Prospectus*].

Note: *All Applications are processed through the Central Applications Office. (refer to www.cao.ie)*

All applications must be successful at the Nursing Careers Centre (NCC) written assessment before being considered for an offer as a mature applicant (refer to www.nursingcareers.ie). However, success at the NCC written assessment does not guarantee an offer of a place.

- III. Every student must satisfy Garda Vetting and Medical Clearance requirements. This is organised through the School of Nursing and Midwifery in conjunction with HSE West. Failure to meet the Garda Vetting requirements results in the student being removed from the Degree programme.
- IV. Registration is carried out by the University. Students must be registered in their Degree programme not later than fifteen days after the commencement of Programmes.
- V. To obtain the degrees of Bachelor of Nursing Science or Bachelor of Midwifery Science as set out in the Explanatory Note (above);
- (a) Students must pursue programmes of Study extending over a period of not less than four Academic Years and must pass the various Examinations prescribed below, meeting the requirements as set out elsewhere in these Regulations, in the Marks and Standards of the School
http://www.nuigalway.ie/academic_records/syllabus/marks_standards.html and in Student Handbooks where necessary.
- (b) The Examinations are as follows:
- (1) The First University Examination in their programme.
 - (2) The Second University Examinations in their programme.
 - (3) The Third University Examination in their programme.
 - (4) The Fourth University Examination, being the Final Examination in their programme.

Note: The duration of the programme cannot be shortened; no part of the Final Examination may be taken before the end of 8 Semesters of professional education

There is a time-limit on the completion of the degree; while a student who fails their yearly examination in a particular year has the right to re-sit that/those examination(s) the following year [refer par. VI to X below], the total time allowed for the successful completion of the four University Examinations is 8 years or 16 semesters in total.

- VI. The First University Examination must be passed completely before a student can proceed to the Second Year.
- (a) To enter this Examination, the student must have satisfied the attendance requirements on the First Year Programme, including completion of all coursework and required clinical placement(s). Exceptions may only be permitted by the Head of School where this is recommended by the programme on professionally verified grounds of student ill-health, close family bereavement or of significant personal difficulties.
- (b) The Examination will comprise examinations on Semester 1 modules in

the Winter Examination Session and examinations on the Semester 2 modules in the Summer Examination Session. Repeat examinations, for both Semester 1 and Semester 2 modules, if necessary will be held, during the Autumn Examination Sessions. (c) Failure of the Examination in full or in part at the repeat examination will require the student to re-sit the Examination in the following year.

- (d) The First Year examination must be completed within two years of entering First Year.

VII. The Second University Examination must be passed completely before a student can proceed to the Third Year.

- (a) To enter this Examination, the student must have satisfied the attendance requirements on the Second Year Programme, including completion of all coursework and required clinical placements(s). Exceptions may only be permitted by the Head of School where this is recommended by the programme on professionally verified grounds of student ill-health, close family bereavement or of significant personal difficulties.
- (b) The Examination will comprise examinations on Semester 1 modules in the Winter Examination Session and examinations on the Semester 2 modules in the Summer Examination Session. Repeat examinations, for both Semester 1 and Semester 2 modules, if necessary will be held, during the Autumn Examination Sessions. (c) Failure of the Examination in full or in part at the repeat examination will require the student to re-sit the Examination in the following year.
- (d) The Second Year examination must be completed within two years of entering Second Year.

VIII. The Third University Examination must be passed completely before a student can proceed to the Fourth Year.

- (a) To enter this Examination, the student must have satisfied the attendance requirements on the Third Year Programme, including completion of all coursework and required clinical placements(s). Exceptions may only be permitted by the Head of School where this is recommended by the programme on professionally verified grounds of student ill-health, close family bereavement or of significant personal difficulties.
- (b) The Examination will comprise examinations on Semester 1 modules in the Winter Examination Session and examinations on the Semester 2 modules in the Summer Examination Session. Repeat examinations, for both Semester 1 and Semester 2 modules, if necessary will be held, during the Autumn Examination Sessions.
- (c) Failure of the Examination in full or in part at the repeat examination will require the student to re-sit the Examination in the following year.
- (d) The Third Year examination must be completed within two years of entering Third Year.

- IX.** The Fourth and Final University Examination must be passed completely before a student can be awarded the Bachelor of Nursing Science or Bachelor of Midwifery Science
- (a) To enter this Examination, the student must have satisfied the attendance requirements on the Final Year Programme, including completion of all coursework, required clinical placement(s) and clinical hours. Exceptions may only be permitted by the Head of School where this is recommended by the programme on professionally verified grounds of student ill-health, close family bereavement or of significant personal difficulties.
 - (b) The Examination will comprise examinations on Semester 1 modules in the Winter Examination Session and examinations on the Semester 2 modules in the Summer Examination Session. Repeat examinations, for both Semester 1 and Semester 2 modules, if necessary will be held, during the Autumn Examination Sessions.
 - (c) Failure of the Examination in full or in part at the repeat examination will require the student to re-sit the Examination in the following year.
 - (d) The Final Year examination must be completed within two years of entering Final Year.
 - (e) To be awarded the Degree students must meet the requirements of An Bord Altranais in full.
- X** (a) The Award of the Bachelor of Nursing Science or Bachelor of Midwifery Science Degree will require successful completion of all years of the Undergraduate Programme as set out in Rules V to IX (inclusive) above.
- (a) The calculation of the overall degree results awarded, including the calculation of Honours (if any), will be based on 30% of the aggregate mark obtained at the 3rd Year examinations, and 70% of the aggregate obtained at the 4th year examinations.
- XI.** Any student failing to pass the Examination indicated in Rules VI, to IX (inclusive) above within the specified intervals will be ineligible to proceed further with his/her nursing / midwifery studies. Exemptions to this rule will be granted by the Academic Council, on the recommendation of the College of Medicine, Nursing and Health Sciences, only for very serious reasons.
- XII.** Re-attendance may be required from any student whose attendance is considered to have been unsatisfactory, or who has not attained a sufficient standard of knowledge as judged by examination, competency or progressive assessment. Satisfactory attendance is generally regarded as attendance and participation in not less than 70% of the taught sessions provided. Students who have not achieved satisfactory attendance may not be admitted to examinations.

BACHELOR OF NURSING SCIENCE (GENERAL)

Refer to General regulations for the Undergraduate Degrees in Nursing & Midwifery (NFQ Level 8 Ref; www.nfq.ie) Paragraphs to I to XII above

This programme leads to the award of Bachelor of Nursing Science (General) and registration in the General division of the Nurse Register maintained by Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland). The programme is offered in partnership with the Health Service Executive, West.

PROGRAMME STRUCTURE

The Bachelor of Nursing Science Programme is a four-year academic programme, which is delivered over two semesters for the first three years. Year four of the programme comprises of clinical/theory instruction in semester one and a clinical internship which occurs in year four, semester two, to run over 36 weeks. The theoretical component comprises of lectures, seminars, workshops, experiential learning, skills' training and reading time. The clinical practice placements are linked to the theoretical input. Clinical practice modules require students to complete clinical placements throughout the Health Service Executive region. While on clinical placements students will be supervised by a named preceptor. In accordance with Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland) the total requirements of the programme are 144 weeks. During clinical internship students will be paid a salary.

PROGRAMME CONTENT

Theoretical content aims to provide students with the knowledge necessary to underpin their professional practice. The following key themes will be addressed: Biological Sciences, providing students with a basis for understanding the structure and function of the human body in health and ill-health.

Social Sciences, introducing students to the disciplines of sociology, psychology, philosophy and law as applied to nursing practice. The overall aim is to provide students with an understanding of what influences behaviour in both personal and professional contexts

Nursing practice, including an exploration of the nature and goals of nursing, the nursing management of the ill adult and specialist client groups and preparation for practice. Later in the programme the focus is on enabling students to make the transition from student nurse to registered practitioner.

Research / Informatics, introducing students to the concepts and principles of research and its use in clinical practice. Students will also have an opportunity to develop competency in basic information technology skills.

Health promotion, introducing students to the principles and skills of promoting health.

Leading & Developing practice – focuses on exploring the transition from student

nurse to that of registered practitioner, further developing students skills in care provision, examining issues around leadership, management and clinical governance in relation to factors that affect the quality of care for clients.

Clinical modules provide students with the opportunity to develop their nursing skills in the reality of practice.

ASSESSMENT AND REGULATIONS

Each year both the theoretical and clinical components of the programme will be assessed. Modules are assessed by means of a combination of written examinations and coursework; this includes both theoretical and clinical modules. Students' clinical performance/progress is assessed on an on-going basis while on placements to determine competency. To be deemed competent students must attain the level specified in the Assessment of Competency Tool, based on the Domains of Competency identified by Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland). Students must pass both theoretical, clinical and competency assessments to be deemed to have passed the year. Students will not be permitted to proceed to the next year of the programme until they have met all the requirements specified in the Marks and Standards. Students who fail to proceed must pass within one further year or they will be required to withdraw from the programme.

To pass the programme overall students must pass the required theoretical, practice and competency assessments. In addition, to be awarded the degree and to register as a general nurse, students must meet the requirements for registration identified by Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland). The calculation of the overall degree results awarded, including the calculation of Honours (if any), will be based on 30% of the aggregate mark obtained at the 3rd Year examinations, and 70% of the aggregate obtained at the 4th year examinations. A full account of programme regulations, compensation and credits is provided in the Marks and Standards.

ENTRY CRITERIA

Applicants must meet the following criteria to be eligible for admission to the Bachelor of Nursing Science (General) programme.

Applicants must be at least 17 years of age on 15 January of the year of entry onto the programme.

The minimum educational requirements for admission to the programme is a pass in the Leaving Certificate examination, having obtained a minimum of grade C3 in higher level papers in any two of the subjects listed below and a minimum of grade D3 in ordinary or higher level papers in the other four subjects.

Irish (not Foundation Level)

English

Mathematics (not Foundation Level)

A laboratory science subject (Chemistry, Physics, Biology, Physics and Chemistry

(joint), Agricultural Science)

Any other two subjects acceptable for matriculation registration purposes.

Or

Have second level education qualifications equivalent to the above

An applicant who does not meet the education requirements and who is 23 years of age or over on 15 January in the year of application may apply as a mature student. A separate pathway is available for mature students.

Successful applicants must be of good mental and physical health and free from any defect or abnormality which would interfere with the efficient performance of their role as nurse. All successful applicants are required to have medical screening and be deemed fit to undertake this role.

SELECTION CRITERIA

Selection of applicants meeting the minimal educational requirements is on the basis of points obtained in the Leaving Certificate (or equivalent). Applicants apply through the CAO. A separate pathway applies to mature applicants, that is, those who are applying on the grounds of mature years only and not on the basis of educational achievement. Further details are available from the Nursing Careers Centre, Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland).

BACHELOR OF NURSING SCIENCE (PSYCHIATRIC)

Refer to General regulations for the Undergraduate Degrees in Nursing & Midwifery(NFQ Level 8 Ref; www.nfq.ie)

This programme leads to the award of Bachelor of Nursing Science (Psychiatric) and registration in the Psychiatric division of the Nurses Register maintained by Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland).

PROGRAMME STRUCTURE

The Bachelor of Nursing Science Programme is a four-year academic programme, which is delivered over two semesters for the first three years. Year four of the programme comprises of clinical/theory instruction in semester one and a clinical internship which occurs in year four, semester two, to run over 36 weeks.

Students are required to be in clinical practice for 39 hours per week over the internship period. Students are paid a salary during their clinical internship. In total, students will complete 24 theoretical modules and 6 clinical modules. Clinical modules will require students to complete clinical placement throughout the Health Service Executive West. While on clinical internship students will be supervised by a named preceptor, who is a Registered Nurse. Clinical modules require students to be in clinical practice for 35 hours per week. Students are supernumerary while on placement, that is, when not on clinical internship.

PROGRAMME CONTENT

Theoretical content aims to provide students with the knowledge necessary to underpin their professional practice. The following key themes will be addressed:

- Biological Sciences, providing students with a basis for understanding the structure and function of the human body in health and ill-health.
- Social Sciences, introducing students to the disciplines of sociology, psychology, philosophy and law as applied to nursing practice. The overall aim is to provide students with an understanding of what influences behavior in both personal and professional contexts
- Nursing practice, including an exploration of the nature and goals of psychiatric nursing, the nursing management of the mentally ill person and preparation for practice. Later in the programme the focus is on enabling students to make the transition from student nurse to registered practitioner.
- Research / Informatics, introducing students to the concepts and principles of research and its use in clinical practice. Students will also have an opportunity to develop competency in basic I.T. skills.
- Mental health promotion, introducing students to the principles and skills of promoting mental health.
- Leadership in psychiatric nursing practice, students will examine factors that affect the management of care and develop an understanding of theories of leadership and management of change.

Clinical modules provide students with the opportunity to develop their nursing skills in the reality of practice.

ASSESSMENT AND REGULATIONS

Each year both the theoretical and clinical components of the programme will be assessed. Modules are assessed through a combination of written examinations and coursework; this includes both theoretical and clinical modules. Students' clinical performance/progress is assessed on an on-going basis while on placements to determine competency. To be deemed competent students must attain the level specified in the Assessment of Competency Tool, based on the Domains of Competency identified by Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland). Students must pass both theoretical, clinical and competency assessments to be deemed to have passed the year. Students will not be permitted to proceed to the next year of the programme until they have met all the requirements specified in the Marks and Standards. Students who fail to proceed must pass within one further year or they will be required to withdraw from the programme.

To pass the programme overall students must pass the required theoretical, practice and competency assessments. In addition, to be awarded the degree and to register as a psychiatric nurse, students must meet the requirements for registration identified by Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland). The calculation of the overall degree results awarded, including the calculation of Honours (if any), will be based on 30% of the aggregate mark obtained at the 3rd Year examinations, and 70% of the aggregate obtained at the 4th year examinations. A full account of programme regulations, compensation and credits is provided in the Marks and Standards.

ENTRY CRITERIA

Applicants must meet the following criteria to be eligible for admission to the Bachelor of Nursing Science (Psychiatric) programme.

- Applicants must be at least 17 years of age on 15 January of the year of entry onto the programme
- The minimum educational requirements for admission to the programme is a pass in the Leaving Certificate examination, having obtained a minimum of grade C3 in higher level papers in any two of the subjects listed below and a minimum of grade D3 in ordinary or higher level papers in the other four subjects.
 - Irish (not Foundation Level)
 - English
 - Mathematics (not Foundation Level)
 - A laboratory science subject (Chemistry, Physics, Biology, Physics and Chemistry (joint), Agricultural Science)
 - Any other two subjects acceptable for matriculation registration purposes **OR**
 - Have second level education qualifications equivalent to the above

An applicant who does not meet the education requirements and who is 23 years of age or over on 15 January in the year of application may apply as a mature student. A separate pathway is available for mature students.

Successful applicants must be of good mental and physical health and free from any defect or abnormality which would interfere with the efficient performance of their role as nurse. All applicants must undertake a medical and be deemed fit to undertake this role.

SELECTION CRITERIA

Selection of applicants meeting the minimal educational requirements is on the basis of points obtained in the Leaving Certificate (or equivalent). Applicants apply through the CAO. A separate pathway applies to mature applicants, that is, those who are applying on the grounds of mature years only and not on the basis of educational achievement. Further details are available from the Nursing Careers Centre, Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland).

BACHELOR OF MIDWIFERY SCIENCE

Refer to General regulations for the Undergraduate Degrees in Nursing & Midwifery (NFQ Level 8 Ref; www.nfq.ie)

On completion of this programme students are awarded the Bachelor of Midwifery Science and are eligible to apply to register as a midwife with Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland). The programme is offered in partnership with the Health Service Executive West.

PROGRAMME CONTENT

Theoretical content aims to provide students with the knowledge necessary to underpin their professional practice. The following key themes are addressed:

Biological Sciences: Provides students with a basis to understand the structure and functioning of the human body, with a specific emphasis on the knowledge necessary to underpin midwifery practice.

Social Sciences: Introduces students to psychology, sociology, and philosophy and its application to midwifery practice. The overall aim is to give students an understanding of what influences behavior in both personal and professional contexts.

Midwifery Skills: Focuses on the different skills required to practice as a midwife.

Midwifery Studies: Provides students with the knowledge of how to care for a woman and her baby experiencing a normal pregnancy, childbirth and puerperium and the woman and her baby experiencing complications during pregnancy, childbirth and the puerperium.

Health Promotion: Introduces students to the principles of health and health promotion in relation to midwifery practice.

Research: Gives students an in-depth understanding of research methods and its application to midwifery practice. Students will also become competent in basic IT skills with an emphasis on electronic information retrieval.

Leading & Developing Practice – focuses on exploring the transition from student midwife to that of registered practitioner, further developing students skills in care provision, examining issues around leadership, management and clinical governance in relation to factors that affect the quality of care for clients.

Clinical modules provide students with the opportunity to develop their midwifery skills in the reality of practice.

ASSESSMENT AND REGULATIONS

Each year both the theoretical and clinical components of the programme are assessed. Modules are assessed by means of a combination of written examinations

and coursework; this includes both theoretical and clinical modules. Students' clinical performance/progress is assessed on an on-going basis while on placements to determine competency. To be deemed competent students must attain the level specified in the Competency Assessment Tool, based on the Domains of Competence identified by Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland). Students must pass both the theoretical, clinical and competency assessments to be deemed to have passed the year. Students will not be permitted to proceed to the next year of the programme until they have met all the requirements specified in the Marks and Standards for the programme. Students who fail to proceed must pass within one further year or they will be required to withdraw from the programme.

To pass the programme overall, students must pass the required theoretical, practice and competency assessments. In addition, to be awarded the degree and to apply to register as a midwife, students must complete the minimum clinical practice experience requirements and minimum number of clinical hours required by Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland). The final calculation of marks is based on 30% of the aggregate mark obtained at the 3rd Year examinations, and 70% of the aggregate obtained at the 4th year examinations. A full account of programme regulations, compensation and credits is provided in the Marks and Standards.

ENTRY CRITERIA

Applicants must meet the following criteria to be eligible for admission to the Bachelor of Midwifery Science programme.

Applicants must be at least 17 years of age on 15 January of the year of entry onto the programme.

The minimum educational requirements for admission to the programme is a pass in the Leaving Certificate examination, having obtained a minimum of grade C3 in higher level papers in any two of the subjects listed below and a minimum of grade D3 in ordinary or higher level papers in the other four subjects.

Irish (not Foundation Level)

English

Mathematics (not Foundation Level)

A laboratory science subject (Chemistry, Physics, Biology, Physics and Chemistry (joint), Agricultural Science)

Any other two subjects acceptable for matriculation registration purposes.

Or

Have second level education qualifications equivalent to the above

An applicant who does not meet the education requirements and who is 23 years of age or over on the 1st January in the year of application may apply as a mature

student. A separate pathway is available for mature students.

Successful applicants must be of good mental and physical health and free from any defect or abnormality which would interfere with the efficient performance of their role as midwife. All applicants must undertake medical screening and be deemed fit to undertake this role. In addition each student must undergo Garda Vetting.

SELECTION CRITERIA

Selection of applicants meeting the minimal educational requirements is on the basis of points obtained in the Leaving Certificate (or equivalent). Applicants apply through the CAO. A separate pathway applies to mature applicants, that is, those who are applying on the grounds of mature years only and not on the basis of educational achievement. Further details are available from the Nursing Careers Centre, Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland).

SECTION B
POSTGRADUATE TAUGHT
PROGRAMMES

COLLEGE OF MEDICINE, NURSING & HEALTH SCIENCES

TAUGHT POSTGRADUATE CERTIFICATE, DIPLOMA AND MASTERS PROGRAMMES

(NFQ level 9 awards; ref. www.nfq.ie)

MASTER OF HEALTH SCIENCES (CHRONIC ILLNESS MANAGEMENT)

OVERVIEW

This Master of Health Sciences programme is aimed at preparing students to engage in chronic illness prevention and management. The programme is multidisciplinary and welcomes applications from healthcare professionals from the wider multidisciplinary team (including medical doctors, nurses, midwives, physiotherapists, occupational therapists, and speech & language therapists). Students may exit after 8 months with a Postgraduate Diploma if they prefer not to complete the full Masters.

The year is divided into two teaching semesters (September to December and January to April). During the summer period (May to August) students focus on completing a minor dissertation based on original research. Students complete four core modules and two option modules during the taught element of the programme. Option modules are selected from a menu of choices. Students must complete the taught element of the programme to **upper** second class honours standard (i.e. 60%) before proceeding to complete the dissertation element. Students who fail to progress to the dissertation element of the programme will exit the programme with a Postgraduate Diploma in Health Sciences (Chronic Illness Management).

The taught component of the programme is offered through blended learning, a combination of online and face-to-face learning and teaching - a flexible approach making it possible to combine working full-time with studying. Students are required to attend face-to-face workshops for the equivalent of 16 days over the programme. In addition to attending workshops, students will continuously engage online.

The course is recognised for external CPD by the Irish College of General Practitioners, and has Category 2 approval from An Bord Altranais.

Entry requirements

This course is open to qualified health professionals (doctor, midwife, nurse, occupational therapist, physiotherapist, podiatrist, speech & language therapist, other) currently registered with their relevant professional body and actively involved in clinical practice. Candidates must have secured a final grade of at least second class honours in their primary degree, or hold a relevant Postgraduate Diploma (NQAI Level 9).

Duration

1 calendar year, full-time; 2 calendar-years, part-time

ECTS weighting: 90

Course outline

Full-time version, one year

Semester 1	Semester 2
Critical Issues in Chronic Illness	Effective Chronic Disease Management Strategies for Healthcare Professionals
Literature Based Research Skills	Health Research Methods
Option module*	Option module*
	Summer Research Dissertation

Part-time version, two years

Year 1/Semester 1	Year 1/Semester 2
Critical Issues in Chronic Illness	Effective Chronic Disease Management Strategies for Healthcare Professionals
Option* (Semester 1 or 2)	Option* (Semester 1 or 2)
Year 2/Semester 1	Year 2/Semester 2
Literature Based Research Skills	Health Research Methods

Option* (Semester 1 or 2)	Option* (Semester 1 or 2)
	Summer (Year 2)
	Research Dissertation

SCHOOL OF MEDICINE

TAUGHT POSTGRADUATE CERTIFICATE, DIPLOMA AND MASTERS PROGRAMMES

(NFQ level 9 awards; *ref. www.nfq.ie*)

POSTGRADUATE DIPLOMA IN MEDICAL SCIENCE

PROGRAMME DESCRIPTION

The Medical Science programmes introduce candidates to techniques and frameworks to enable them to critically appraise scientific evidence to answer researchable clinical questions and conduct dedicated research in their own speciality or field of interest. The postgraduate programmes are designed for health care providers with an interest in evidence-based medicine/practice and health and medical research. Content is delivered via distance learning and face-to-face teaching. Beginners in EBM are brought to an advanced level through enquiry based learning. Through this course professionals become better health care providers.

The Postgraduate Diploma is a one year part time course completed over two semesters (60 ECTS). The programme consists of six online modules with candidates completing three modules each semester. The Postgraduate Diploma is also an exit award for the Masters in Medical Science programme available after successful completion of 60 credits.

MINIMUM ENTRY REQUIREMENTS

Successful applicants will normally hold a primary degree in health care, medicine or equivalent qualification, at second class Honours grade one level or above, in a relevant subject. Competence in English language equivalent to IELTS 6.5.

25 places available

CAREER OPPORTUNITIES

Graduates of our Postgraduate Diploma in Medical Science have gone on to pursue careers in a diverse range of fields including the completion of a masters degree in Medical Science, Medical Research and improved professional attitude in daily practice (Evidence Based Practice/Medicine).

PROGRAMME AIMS

The broad aim of this programme is to strengthen a health care provider's knowledge and skills in subjects particular to medical research and clinical teaching. In particular the programme aims to:

- Using a blend of enquiry based learning and a self-directed interactive approach, by the end of this programme you should be able to:
- To search, retrieve, and store scientific information related to a specific topic of interest.

- Demonstrate critical appraisal skills regarding specified scientific literature.
- Demonstrate an ability to ask researchable questions related to a specified field of interest.
- To detect the validity and reliability of published evidence and measurement devices aimed to be used in a future research project.
- To write a scientific essay in *Word* and referencing according to Vancouver formats (*Word* plus *Endnote*)
- To know how to use advanced descriptive and inferential statistics and critical appraisal of published statistics.
- Demonstrate competence in designing your own research design and to produce an appropriate research proposal.
- To organise a research meeting(s) with fellow researchers/heads of departments aiming the launch of your own research strand.
- To submit an approved research proposal.
- To be enrolled in the second year of the Master of Medical Science (Health Informatics)

DURATION OF THE PROGRAMME

The programme may be taken on a part-time basis over at least 1 year.

Programme Content

All modules are delivered in one week blocks and include distance learning element.

Time table details: modules completed over two semesters

<i>Modules, Year 1, Semester 1</i>	ECTS
Finding the Needle in the I-stack (E-resources)	10
Lies, Damned Lies, and Statistics	10
From Popper to Proposal (research methods)	10
<i>Modules, Year 1, Semester 2</i>	
Choice Module	10
Research Methods (Advanced Level)	10
Advanced Statistics	10
Deadline for Final Research Proposal	Spring

MASTERS IN MEDICAL SCIENCE

PROGRAMME DESCRIPTION

The Masters in Medical Science (Health Informatics) is a one year programme designed for health care providers to conduct and publish dedicated evidence-based research in their own speciality or field.

The Masters in Medical Science (Health Informatics) is completed over a 12-month period (90 ECTS). The programme consists of the modular content of the Postgraduate Diploma plus a dedicated Research Thesis.

MINIMUM ENTRY REQUIREMENTS

Successful applicants will normally hold a primary degree in health care, medicine or equivalent qualification, at second class Honours grade one level or above, in a relevant subject. Competence in English language equivalent to IELTS 6.5. All candidates must have successfully completed the Postgraduate Diploma in (Health Informatics) or a comparable award deemed by the School of Medicine to satisfy these requirements.

25 places available

CAREER OPPORTUNITIES

Graduates of the Masters in Medical Science have gone on to pursue careers in a diverse range of fields including the completion of a MD and PhD degrees in Medical Science and Medical Research. They have brought improved professional skills and attitudes into their daily practice (Evidence Based Practice/Medicine).

PROGRAMME AIMS

The broad aim of this programme is to strengthen a health care provider's knowledge and skills in subjects particular to medical research and clinical teaching. In particular the programme aims to:

- Using a blend of enquiry based learning and a self-directed interactive approach, by the end of this programme you should be able to:
- To search, retrieve, and store scientific information related to a specific topic of interest.
- Demonstrate critical appraisal skills regarding specified scientific literature.
- Demonstrate an ability to ask researchable questions related to a specified field of interest.
- To detect the validity and reliability of published evidence and measurement devices aimed to be used in a future research project.
- To write a scientific essay in *Word* and referencing according to Vancouver formats (*Word* plus *Endnote*)

- To know how to use advanced descriptive and inferential statistics and critical appraisal of published statistics.
- Demonstrate competence in designing your own research design and to produce an appropriate research proposal.
- To organise a research meeting(s) with fellow researchers/heads of departments aiming the launch of your own research strand.
- To submit a research Thesis
- Publish a research paper
- To encourage progression to PhD programmes.

DURATION OF THE PROGRAMME

The programme may be taken on a 1-year full-time, or 2-year part-time basis.

Programme Content

Modules, Year 1, Semester 1

Finding the Needle in the I-Stack (E-Resources)	10 ECTS
Lies, Damned Lies, and Statistics	10 ECTS
From Popper to Proposal (research methods)	10 ECTS

Modules, Year 1, Semester 2

Research Methods (Advanced Level)	10 ECTS
Advanced Statistics	10 ECTS
Research Thesis	30 ECTS

POSTGRADUATE DIPLOMA IN MEDICAL SCIENCE (ENDOVASCULAR SURGERY)

PROGRAMME DESCRIPTION

A new study programme combining practical endovascular surgical training with evidence based medical research skills.

GENERAL

The Endovascular Training content is provided under the guidance of vascular surgeons from the Western Vascular Institute. The curriculum is taught through hands-on, supervised training, and supervised sessions in the Endovascular surgery teaching lab, and weekly scheduled educational meetings.

Candidates will apply knowledge and skills to search for and critically appraise scientific evidence to answer researchable clinical questions, to submit a research proposal and to complete this proposal through a research thesis in endovascular surgery. The Postgraduate Diploma is also an exit award for the Masters in Medical Science programme available after successful completion of 60 credits.

PROGRAMME AIMS AND OBJECTIVES

The aim of the study programme is to combine practical endovascular surgical training with evidence based medical research skills.

By the end of this programme you should be able to:

- To search, retrieve, and store scientific information related to a specific topic of interest within endovascular surgery.
- Demonstrate critical appraisal skills regarding specified scientific literature.
- Demonstrate an ability to ask researchable questions related to endovascular surgery.
- To detect the validity and reliability of published evidence and measurement devices aimed to be used in a future research project.
- To write a scientific essay in Word and referencing according to Vancouver formats (Word plus Endnote).
- To know how to use advanced descriptive and inferential statistics and critical appraisal of published statistics.
- Demonstrate competence in designing your own research design and to produce an appropriate research proposal.
- To organise a research meeting(s) with fellow researchers/heads of departments aiming the launch of your own research strand.
- To submit an approved research proposal.
- Understand the basic concepts of all endovascular surgery procedures, including: Imaging equipment, radiation physics, and safety
Diagnostic arteriography and
venography Guide wire and catheter
skills Percutaneous vascular access
Percutaneous transluminal angioplasty (PTA)

Subintimal Angioplasty

Intravascular stents

Pharmacologic and mechanical thrombolytic therapy

Stent-grafts for endovascular repair of abdominal aortic aneurysms Coil embolization (to facilitate endovascular AAA repair)

Closure of percutaneous access sites

Accepted intra-arterial and intracaval filtering devices

ECTS WEIGHTING

60 ECTS.

MINIMUM ENTRY REQUIREMENTS

Applicants must be a qualified and registered medical physician/surgeon, and enrolled on the Western Vascular Institute's Endovascular Training Programme as well as other suitably qualified medical persons.

Competence in English language equivalent to IELTS 6.5.

EXAMINATION ARRANGEMENTS

Candidates will be required to complete individual assignments and presentations for each module. A detailed research proposal including a scientific review of the literature (introduction section), and a fully-fledged research proposal (method section) together with regular attendance will be part of the final exam.

Candidates must complete a logbook and there will be ongoing evaluation of the knowledge, competency, attitudes, and performance of the Endovascular surgery trainees. The assessment will include cognitive, motor, and interpersonal skills as well as Endovascular surgery judgment, to verify the individual has demonstrated sufficient professional ability to practice Endovascular surgery therapy completely and independently. This evaluation will be performed at three-monthly intervals, as well as upon completion of the training programme.

CAREER OPPORTUNITIES

Graduates of our previous programmes have gone on to pursue careers in a diverse range of fields of health and medical research including MDs and PhDs and improved professional knowledge, skills and attitudes in daily practice (Evidence Based Medicine

– Endovascular Surgery).

PROGRAMME CONTENT (SUBJECT TO CHANGE)

Specialist surgical training combined with six research modules—one year.

<i>Modules, Year 1, Semester 1</i>	ECTS
Finding the Needle in the I-stack (E-resources)	10
Lies, Damned Lies, and Statistics	10
From Popper to Proposal (research methods)	10
<i>Modules, Year 1, Semester 2</i>	
Optional Module	10
Research Methods (Advanced Level)	10
Advanced Statistics	10
Deadline for Final Research Proposal	Spring

MASTERS IN MEDICAL SCIENCE (ENDOASCULAR SURGERY)

PROGRAMME DESCRIPTION

A new study programme combining practical endovascular surgical training with evidence based medical research skills.

The Masters in Medical Science (Endovascular Surgery) is a completed over a 12 month period (**90** ECTS) full-time, or 2 years part-time. The programme consists of specific research modules in addition to dedicated supervised session in Endovascular Surgery delivered by the Western Vascular Institute. The programme consists of the modular content of the Postgraduate Diploma plus a dedicated Research Thesis.

MINIMUM ENTRY REQUIREMENTS

Applicants must be a qualified and registered medical physician/surgeon, and enrolled on the Western Vascular Institute's Endovascular Training Programme as well as other suitably qualified medical persons. Competence in English language equivalent to IELTS 6.5.

25 places available

CAREER OPPORTUNITIES

Graduates of the Masters in Medical Science programmes have gone on to pursue careers in a diverse range of fields including the completion of a MD and PhD degrees in Medical Science and Medical Research. They have brought improved professional skills and attitudes into their daily practice (Evidence Based Practice/Medicine).

PROGRAMME AIMS

The broad aim of this programme is to strengthen a surgeon's knowledge and skills in subjects particular to medical research and clinical teaching. In particular the programme aims to:

- To know how to use advanced descriptive and inferential statistics and critical appraisal of published statistics.
- Demonstrate competence in designing your own research design and to produce an appropriate research proposal.
- To organise a research meeting(s) with fellow researchers/heads of departments aiming the launch of your own research strand.
- To submit a research Thesis
- Publish a research paper
- To encourage progression to PhD programmes.

- Understand the basic concepts of all endovascular surgery procedures, including:
Imaging equipment, radiation physics, and safety
Diagnostic arteriography and venography
Guide wire and catheter skills
Percutaneous vascular access
Percutaneous transluminal angioplasty (PTA)
Subintimal Angioplasty
Intravascular stents
Pharmacologic and mechanical thrombolytic therapy
Stent-grafts for endovascular repair of abdominal aortic aneurysms
Coil embolization (to facilitate endovascular AAA repair)
Closure of percutaneous access sites
Accepted intra-arterial and intracaval filtering devices

DURATION OF THE PROGRAMME

The programme may be taken on a 1-year full-time, or 2-year part-time basis.

MASTERS OF SCIENCE IN SPORTS & EXERCISE PHYSIOTHERAPY

(Programme is currently suspended)

A new revised and updated programme offered in conjunction with the University of Limerick. The MSc in Sports and Exercise Physiotherapy combines practical training with evidence based medical research skills.

Part-time Masters two years - Places limited to 10

PROGRAMME DESCRIPTION

The overall intention of the Masters programme is to produce a successful student with a wide breadth of knowledge across Sports & Exercise Physiotherapy and the necessary skills to put the theory into practice

PROGRAMME AIMS & OBJECTIVES

The programme will provide physiotherapists with:

- The necessary scientific background knowledge to appreciate the issues arising in the field of Sports & Exercise Physiotherapy.
- The necessary skills and knowledge to provide advice on the prevention of sports injuries.
- Up to date training in modern methods of assessing, diagnosing and treating sports injuries including emergency care.
- Opportunities to learn about the theory and application of Sports Psychology, Podiatry, Biomechanics, Sports Nutrition, Sports Pharmacology, Exercise Physiology, Fitness Assessment and ethical issues within sport.
- Opportunity to learn about the medical applications of exercise in maintaining health and in disease
- An introduction to research appropriate to the field of Sports & Exercise Physiotherapy

ECTS WEIGHTING 90 ECTS

MINIMUM ENTRY REQUIREMENTS

Applicants must be chartered physiotherapy graduates (BSc Physiotherapy NUI) of National University of Ireland or another university deemed acceptable, and have a minimum of two year's experience post qualification.

SELECTION CRITERIA

Short listed applicants may be called to interview and the final selection made at that point. Preference will be given to applicants with a strong sporting background, either personal involvement or recognized service provision.

PROGRAMME CONTENT

Sports & Exercise Physiotherapy	ECTS	Year 1
Musculoskeletal Anatomy	5	Semester 1
Sports Injuries 1	5	Semester 1
Biomechanics	5	Semester 1

Sport, Exercise, and Performance	5	Semester 2
Thesis	30	Both Summers

POSTGRADUATE DIPLOMA IN SPORTS & EXERCISE PHYSIOTHERAPY

(Programme is currently suspended)

A new revised and updated programme offered in conjunction with the University of Limerick. The Postgraduate Diploma in Sports and Exercise Physiotherapy combines practical training with evidence based medical research skills.

Part-time Postgraduate Diploma two years - Places limited to 10

PROGRAMME DESCRIPTION

The overall intention of the Post Graduate Diploma programme is to produce a successful student with a wide breadth of knowledge across Sports & Exercise Physiotherapy and the necessary skills to put the theory into practice

PROGRAMME AIMS & OBJECTIVES

The programme will provide physiotherapists with:

- The necessary scientific background knowledge to appreciate the issues arising in the field of Sports & Exercise Physiotherapy.
- The necessary skills and knowledge to provide advice on the prevention of sports injuries.
- Up to date training in modern methods of assessing, diagnosing and treating sports injuries including emergency care.
- Opportunities to learn about the theory and application of Sports Psychology, Podiatry, Biomechanics, Sports Nutrition, Sports Pharmacology, Exercise Physiology, Fitness Assessment and ethical issues within sport.
- Opportunity to learn about the medical applications of exercise in maintaining health and in disease
- An introduction to research appropriate to the field of Sports & Exercise Physiotherapy

ECTS WEIGHTING 60 ECTS

MINIMUM ENTRY REQUIREMENTS

Applicants must be chartered physiotherapy graduates (BSc Physiotherapy NUI) of National University of Ireland or another university deemed acceptable, and have a minimum of two year's experience post qualification.

SELECTION CRITERIA

Short listed applicants may be called to interview and the final selection made at that point. Preference will be given to applicants with a strong sporting background, either personal involvement or recognized service provision.

MASTERS OF SCIENCE IN SPORTS & EXERCISE MEDICINE

(Programme is currently suspended)

A new revised and updated programme offered in conjunction with the University of Limerick. The MSc in Sports and Exercise Medicine combines practical training with evidence based medical research skills.

Part-time Masters two years - Places limited to 10

PROGRAMME DESCRIPTION

The overall intention of the Masters programme is to produce a successful student with a wide breadth of knowledge across Sports & Exercise Medicine and the necessary skills to put the theory into practice

PROGRAMME AIMS AND OBJECTIVES

The programme will provide doctors with:

- The necessary scientific background knowledge to appreciate the issues arising in the field of Sports & Exercise Medicine.
- The necessary skills and knowledge to provide advice on the prevention of sports injuries.
- Up to date training in modern methods of assessing, diagnosing and treating sports injuries including emergency care.
- Opportunities to learn about the theory and application of Sports Psychology, Podiatry, Biomechanics, Sports Nutrition, Sports Pharmacology, Exercise Physiology, Fitness Assessment and ethical issues within sport.
- Opportunity to learn about the medical applications of exercise in maintaining health and in disease
- An introduction to research appropriate to the field of Sports & Exercise Medicine

ECTS WEIGHTING 90 ECTS

MINIMUM ENTRY REQUIREMENTS

Applicants must be medical graduates of National University of Ireland or another university deemed acceptable, and have a minimum of one year's experience after registration with the Irish Medical Council.

SELECTION CRITERIA

Applicants wishing to enter for the Pfizer Bursary must complete a 200 word statement on why they feel they should be accepted into the programme. Short listed applicants may be called to interview and the final selection made at that point. Preference will be given to applicants with a strong sporting background, either personal involvement or recognized service provision.

POSTGRADUATE DIPLOMA IN MEDICAL SCIENCE (MUSCULOSKELETAL MEDICINE)

(Programme is currently suspended)

PROGRAMME DESCRIPTION

An exciting new study programme in integrated musculoskeletal practice aimed at establishing a method of musculoskeletal assessment, clinical reasoning and a choice of appropriate treatment of the spectrum of musculoskeletal conditions presenting at the frontline. The programme incorporates critical evaluation of the existing tenets of musculoskeletal medicine practice, and includes mastery of the skills required to undertake advanced research and develop innovative skills in practice. Content is delivered via face-to-face teaching (block weeks) and distance learning. Beginners in EBM are brought to an advanced level through enquiry based learning.

The Postgraduate Diploma is a one year part time course completed over two semesters (60 ECTS). The programme consists of six modules with candidates completing three modules each semester. Candidates fulfilling the requirements of the Postgraduate Diploma will be eligible for progression onto the Masters in Medical Science (Musculoskeletal Medicine) programmes.

MINIMUM ENTRY REQUIREMENTS

This programme is open to Registered Medical Practitioners, Chartered Physiotherapists, Podiatrists and Advanced Nurse Practitioners or equivalent. Competence in English language equivalent to IELTS 6.5.

25 places available

CAREER OPPORTUNITIES

This programme is designed to enhance the academic and professional development of professional health care practitioners. The future models of care delivery in the field of musculoskeletal medicine will require up-skilling of Doctors and Physiotherapists, Podiatrist and Advanced Nurse practitioners to meet the challenges of their new role. This course will improve professional knowledge, skills, and attitudes in daily practice (Evidence-Based Healthcare).

PROGRAMME AIMS

The musculoskeletal medicine components of the programme include:

- Connective tissue injury and repair
- Pain theory
- Fundamentals of examination and treatment
- Choice of appropriate imaging
- Introduction to injection treatment

In the informatics and biostatistics modules candidates will learn how:

- To search, retrieve, and critically appraise scientific information
- Formulate research questions

- Interpret evidence based guidelines & protocols related to patient information

DURATION OF THE PROGRAMME

The programme may be taken on a part-time basis over at least 1 year.

Programme Content

All modules are delivered in one week blocks and include distance learning elements.

<i>Time table details: modules completed over two semesters</i>	
Modules, Year 1, Semester 1	ECTS
Musculoskeletal Medicine I	10
Informatics I	10
Biostatistics I	10
Modules, Year 1, Semester 2	
Musculoskeletal Medicine II	10
Informatics II	10
Biostatistics II	10
Deadline for Final Research Proposal	Spring

MASTERS IN MEDICAL SCIENCE (MUSCULOSKELETAL MEDICINE) (Programme is currently suspended)

PROGRAMME DESCRIPTION

The Masters in Medical Science (Musculoskeletal Medicine) is a one year programme designed for health care providers to conduct and publish dedicated evidence-based research in musculoskeletal medicine.

The Masters in Medical Science (Musculoskeletal Medicine) is completed over a 12 month period (60 ECTS). The programme consists of specific modules in scientific writing and publication. In addition all candidates will complete a research Thesis and submit a publishable paper according to journal publication guidelines.

MINIMUM ENTRY REQUIREMENTS

This programme is open to Registered Medical Practitioners, Chartered Physiotherapists, Podiatrists and Advanced Nurse Practitioners or equivalent. Competence in English language equivalent to IELTS 6.5. All candidates must have successfully completed the Postgraduate Diploma in (Health Informatics) or a comparable award deemed by the School of Medicine to satisfy these requirements. 25 places available.

CAREER OPPORTUNITIES

Graduates of the Masters in Medical Science programmes have gone on to pursue careers in a diverse range of fields including the completion of a MD and PhD degrees in Medical Science and Medical Research. They have brought improved professional skills and attitudes into their daily practice (Evidence Based Practice/Medicine).

PROGRAMME AIMS

The broad aim of this programme is to strengthen a health care provider's knowledge and skills in subjects particular to medical research and clinical teaching. In particular the programme aims to:

- To know how to use advanced descriptive and inferential statistics and critical appraisal of published statistics.
- Demonstrate competence in designing your own research design and to produce an appropriate research proposal.
- To organise a research meeting(s) with fellow researchers/heads of departments aiming the launch of your own research strand.
- To submit a research Thesis
- Publish a research paper
- To encourage progression to PhD programmes.

DURATION OF THE PROGRAMME

The programme may be taken on a part-time basis over at least 1 year.

Programme Content

Modules completed over two semesters

Scientific Writing and Publication	10
Research Thesis	50

POSTGRADUATE DIPLOMA AND MASTERS IN SURGERY (MCh)

PROGRAMME DESCRIPTION

An exciting new study programme the Masters Degree in Surgery (MCh) is designed to enhance the academic and professional development of surgical trainees by improving the level of scientific appreciation for evidence-based clinical practice. Running parallel to the basic surgical training scheme (BST) this programme will provide surgical trainees with the academic and scientific research skills needed for progression to higher surgical training schemes and academic surgery.

MINIMUM ENTRY REQUIREMENTS

Successful candidates will hold a primary degree in Medicine and are conferred with the degrees of Bachelor of Medicine, Bachelor of Surgery and Bachelor of Obstetrics (MB BCh BAO). The applicants should be selected for the BST national programme but will be required to demonstrate an equivalent clinical and academic competence and have appropriate interview and clinical skills. Candidates not on the BST programme may be eligible and interviews will apply. Competence in English language equivalent to IELTS 6.5.

25 places available

CAREER OPPORTUNITIES

This programme is designed to enhance the academic and professional development of surgeons. The combination of professional surgical training and research output will appeal to graduates intending to apply for higher surgical training (HST) schemes in Surgery or similar medical specialities. Surgeons require recognised postgraduate research and academic qualifications for progression to higher surgical training schemes. This programme will serve as a stepping stone to an MD or PhD.

PROGRAMME AIMS

The aims of this programme include:

- To enhance the academic and professional development of surgeons
- Up-skilling of surgeons to meet the challenges of their new role
- Improve professional knowledge and attitudes in daily practice
- To search, retrieve, and critically appraise scientific information
- Formulate research questions
- Interpret evidence based guidelines & protocols related to patient information

DURATION OF THE PROGRAMME

The programme may be taken on a part-time basis over a 2 year period. An exit award, The Postgraduate Diploma in Surgery is available after year 2.

Programme Content

Surgical Lab Skills
Surgical Education
Patient Safety in the Surgical Environment
Research Thesis

POSTGRADUATE CERTIFICATE & POSTGRADUATE DIPLOMA IN HEALTH SCIENCES (CLINICAL PRIMARY CARE)

OVERVIEW

There is an increasing expectation for community-based health professionals to demonstrate their continuing competence in primary care. Inter-disciplinary learning provides new and interesting challenges for primary care professionals that reflect many of the issues that occur in the context of primary care teams.

This course aims to meet the learning needs of general practitioners and community-based nurses in the management of disease in the community. It aims to give practitioners up-to-date, relevant, in-depth understanding and knowledge of common conditions to assist in the management of disease in practice.

ENTRY

Applicants must be clinically qualified healthcare professionals registered with their relevant professional body and working in a primary care setting. Applicants from secondary care may also be considered. Parts of the programme are delivered in distance learning format and general computer literacy is essential for this.

COURSE STRUCTURE

The Clinical Primary Care collection is a suite of modules on clinical and related non-clinical topics. It has been designed with maximum flexibility in mind to meet the needs of busy health professionals. You can take a single module in a subject of your choice or you can construct your own course at Postgraduate Certificate or Postgraduate Diploma levels by choosing a selection of modules that suit your needs. Modules can be accumulated over up to five years (or one year) as you wish.

The modules are delivered using an e-learning platform supported by dedicated skills training sessions at NUI Galway (usually two non-consecutive days per module). The distance education format allows you to engage in learning at a time and place that suit your lifestyle.

Postgraduate Certificate (30 ECTS) = any 3 modules - at least 2 clinical.
Postgraduate Diploma (60 ECTS) = any 6 modules - at least 3 clinical.

COURSE CONTENT

The modules are listed below. In all modules there is an emphasis on practical application of the learning to the practice setting.

<i>Clinical Modules</i>	<i>ECTS</i>
Diabetes in Primary care	10
Cardiovascular Disease in Primary care	10
Infectious Disease in Primary Care	10
Women's Health in Primary Care	10

Respiratory Disease in Primary Care	10
Minor Surgery and Related Dermatology in General Practice	10
Mental Health in Primary Care	10
Advanced Wound Care Management	10

<i>Non-Clinical Modules</i>	<i>ECTS</i>
Concepts and Principles of Primary Care	10
Health Research Methods	10
Literature-based Research Skills	10
Clinical Teaching Methodologies	10
Collaboration and Interagency Working	10

ASSESSMENT

Each module is assessed via a combination of submitting practice-based assignments and participating in online activities

MASTERS IN HEALTH SCIENCES (PRIMARY CARE)

OVERVIEW

This programme is designed for multidisciplinary professionals working in Irish primary health care. Against a background of ongoing changes in primary care policy as well as advances in approaches to disease management, it is crucial for practitioners to keep up to date with rapid developments in this sector.

Our flexible approach to learning makes it possible for you to pursue your studies while working full time. The taught component of the course is delivered via blended learning, an innovative educational strategy combining online and face-to-face learning and teaching. A menu of optional modules allows you to tailor the course to your individual learning needs.

ENTRY

This course is open to qualified health professionals (doctor, midwife, nurse, occupational therapist, pharmacist, physiotherapist, podiatrist, speech & language therapist, other) currently registered with their relevant professional body and actively involved in community-based clinical practice in Ireland. Applicants with other primary care backgrounds/experience may also be considered (e.g. administrators, policy makers, psychologists, social workers). Candidates must have secured a final grade of at least second class honours in their primary degree, or hold a relevant Postgraduate Diploma (Level 9).

Students must complete the taught element of the programme to second class honours standard (i.e. 60%) before proceeding to complete the dissertation element.

Parts of the programme are delivered in distance learning format and general computer literacy is essential for this.

COURSE STRUCTURE

The Masters may be completed over one year or over two years, according to preference. The programme is delivered mostly by distance learning, with an average of two non-consecutive days of skills workshops in Galway per module. Students complete six modules in total (three core and three optional) as well as a research dissertation. (Credit may be awarded for modules previously completed as part of the [Postgraduate Diploma in Clinical Primary Care](#)).

COURSE CONTENT

Core Modules

- Concepts and Principles of Primary Care
- Literature Based Research Skills
- Health Research Methods

Optional Modules

Students choose three optional modules from a menu that will include most or all of the following:

- Advanced Wound Care Management
- Cardiovascular Disease in Primary Care
- Collaboration and Interagency Working
- Critical Issues in Chronic Disease Management
- Diabetes in Primary Care
- Effective Chronic Disease Management Strategies for Healthcare Professionals
- Ethics of Health Research
- Infectious Disease in Primary Care
- Mental Health in Primary Care
- Minor Surgery and Related Dermatology in General Practice
- Respiratory Disease in Primary Care
- Women's Health in Primary Care

Dissertation

Students complete a minor research dissertation in the form of a 4,000/5,000-word ready-for-publication research paper.

POSTGRADUATE CERTIFICATE & POSTGRADUATE DIPLOMA IN HEALTH SCIENCES (CLINICAL EDUCATION)

RATIONALE

In the health professions, much of the undergraduate teaching and most postgraduate education takes place in clinical settings. Most clinical teachers have little background knowledge of adult learning and have received no formal training in clinical teaching techniques. The purpose of this programme is to provide health professionals with the knowledge and skills required for effective clinical teaching and to become successful clinical supervisors and motivators of student learning.

PROGRAMME OBJECTIVES

The Postgraduate Certificate and Postgraduate Diploma in Clinical Education are aimed at qualified health professionals for whom clinical teaching forms part of their role or work plan. The aims of the programmes are to provide a theoretical and experiential platform for the participants to develop expertise in all of the key components of clinical teaching.

By the end of the Postgraduate Certificate Programme the learners will be able to:

1. Demonstrate an awareness of the key relevant theories of learning and how they relate to clinical teaching
2. Construct learning events or programmes based on an understanding of the principles of adult learning and programme design
3. Implement and evaluate effective clinical teaching using appropriate theory based techniques
4. Demonstrate an understanding of the purposes and effects of assessment
5. Participate in the design and implementation of objective and reflective methods of assessment
6. Demonstrate proficiency in key teaching skills such as small, large group teaching, giving feedback, using questions appropriately and learner appraisal.

In addition to the aims of the Postgraduate Certificate above, the aim of the Postgraduate Diploma is to bring learners to a level where they can take on a leadership role within their clinical teaching contexts.

ELIGIBILITY AND SELECTION:

The programme will be offered to health professionals who have completed their undergraduate degrees and have achieved full registration status, or equivalent. Applicants must be currently registered with their relevant professional body and actively involved in clinical practice. The programme will also be open to registered

health professionals (who qualified prior to the modern degree route) and who have a minimum of 2 years post registration experience in their clinical profession. Applicants will be selected on the basis of the quality of their application measured against established criteria.

PROGRAMME CAPACITY

Applicants can register for the Postgraduate Certificate or the Postgraduate Diploma. Progression to the Postgraduate Diploma requires successful completion of the Postgraduate Certificate programme. The capacity for the combined programmes is 30 students.

PROGRAMME STRUCTURE

The Postgraduate Certificate programme is delivered over 2 semesters and comprises 4 modules. The Postgraduate Diploma comprises 6 modules which can be completed over 1 year (2 modules per semester for 3 semesters), or over 2 years (3 modules per year).

Most programme material will be delivered using distance learning techniques. Programme materials will be made available sequentially on the Blackboard virtual learning environment. Communication and discussion will be electronic and assessments will be submitted online. The distance learning components will be supported by face-to-face teaching skills workshops and online webinars.

Each module will require approximately 50 hours of effort of which 25 hours will be contact time. The contact hours include reading formal programme materials, participation in practical workshops, participation in discussion board activities, carrying out assignments and mini projects (e-tivities), and the practical application of new knowledge in the workplace.

PROGRAMME OUTLINE

The majority of teaching is by distance learning. The skills of clinical teaching are taught in face-to-face workshops, one day per module. In addition, there is a two-day face-to-face introductory workshop in September.

Modules 1-4 below are mandatory for all students. Postgraduate Diploma students must then choose 2 of the 5 optional modules 5-9 listed below.

Module		Trimester	
1	Learning Theory in Clinical Settings	1	Sep-Dec
2	Clinical Teaching Course Design & Evaluation	1	Sep-Dec
3	Clinical Teaching Methodologies	2	Jan-Mar
4	Foundations of Assessment in Clinical Education	2	Jan-Mar

5	Advanced Assessment in Clinical Education	3	Apr-Jul
6	Professional Development	3	Apr-Jul
7.	Creativity & Innovation	3	Apr-Jul
8.	Simulation in Clinical Education	3	Apr-Jul
9.	Leadership & Management in Healthcare Education	3	Apr-Jul

ASSESSMENT

Modules are assessed by problem based assignment and reflective portfolio. The assignment should be not less than 1,000 words and not more than 1,500 words long. Students will be asked to solve a generic clinical teaching problem using knowledge and skills gained during the module in question. They will also have to justify their choice of solution using evidence from the programme and other resources. The assignment is assessed according to criteria which are published in the programme handbook. Each problem based assignment is worth 55% of the marks for the module in question, while portfolios are worth 45%.

MASTERS IN HEALTH SCIENCES (CLINICAL EDUCATION)

The Master of Health Sciences (Clinical Education) has been designed to address the higher educational needs of health care professionals involved in the delivery of teaching and training in the health care environment. It builds on the Postgraduate Diploma in Health Sciences (Clinical Education), successful completion of which is a requirement for entry into the Masters programme.

AIMS

The programme aims to:

1. Develop the teaching and educational planning skills of experienced clinical professionals who have significant educational responsibilities.
2. Provide students with relevant knowledge to both manage and lead effective educational innovations within their profession.
3. Provide students with the relevant knowledge and skills to plan and teach clinical and communication skills at an advanced level.
4. Enable students to develop the knowledge and skills required to practice evidence based education.
5. Enable students to develop and implement a sound educational research protocol.
6. Enable students to complete an educational research project and to submit in the form of a research paper.

ENTRY

The programme will be offered to health professionals who have completed the Postgraduate Diploma in Clinical Education (or equivalent) and who have achieved at least 60% in their final mark. Applicants must be currently registered with their relevant professional body and actively involved in clinical teaching. Applicants will be selected on the basis of the quality of their C.V., and an application essay (personal statement) in which each candidate must outline their rationale for doing the programme.

STRUCTURE

The programme will be delivered using online distance learning techniques, supported by face to face teaching skills workshops. Students will each have an academic mentor/supervisor for the duration of the Masters. The content of the course is as follows:

MODULES

Evidence Based Education	5
Educational Research Design	15
Clinical Teaching Research Dissertation	40

ASSESSMENT

The taught modules will be assessed using:

- A literature review for the evidence based education module.
- A methodology paper for the educational research module.
- Students are also required to submit a clinical teaching research dissertation at the end of the academic year, in the form of a 4,000 word ready for publication research paper.

M.SC. (MEDICAL PHYSICS)

Medical Physics involves the application of physics and physical methods to problems in medicine. Although often associated with the use of ionizing radiation (X-Rays and Nuclear medicine) it finds application in almost every clinical discipline present in modern hospitals. There is considerable demand for qualified Medical Physicists in Ireland and this demand is expected to grow in the future.

It is a one year full-time programme for which a minimum of five and a maximum of ten students will be accepted.

PROGRAMME CONTENT

The programme consists of an intensive programme of lectures, workshops, laboratory sessions, tutorials, and self-directed learning, followed by a short (three-month) project and dissertation. The syllabus contains modules covering the traditional topics associated with medical physics (Radiation Fundamentals, Hospital & Radiation Safety) and those more associated with clinical engineering (Clinical Instrumentation). The emphasis is on radio-therapy, radiation protection and diagnostic imaging. Programmes in anatomy, physiology, hospital safety and risk management are also provided. The course is accredited by the Institute of Physics and Engineering in Medicine (IPEM) and is therefore recognised as a component of IPEM professional training.

PROGRAMME AIMS AND OBJECTIVES

The programme is designed to meet the demand for qualified medical physicists in Ireland. It is primarily geared towards training for physicists in the application of radiation physics in medicine but maintains a reasonable exposure to key aspects of clinical engineering so that students receive a comprehensive knowledge of the application of physical sciences and engineering to medicine.

ECTS 90 ECTS

ASSESSMENT

Assessment will be through a combination of written and oral examinations, continuous assessments, project work, and the writing of a small dissertation.

Graduates must hold at least a second class Honours degree in Physics or Experimental Physics, Electronic Engineering, or another relevant discipline as determined by the College of Medicine, Nursing and Health Sciences. A candidate with a primary degree without Honours, and having practical experience in a relevant subject area over a number of years at a level deemed to be appropriate by the College of Medicine, Nursing and Health Sciences, may be registered for the M.Sc.Degree. Candidates may be interviewed to determine suitability.

CAREER OPPORTUNITIES

The healthcare industry is one of the largest commercial sectors both nationally and internationally. There will be a considerable demand for qualified medical physicists in Ireland in the future. There will be a significant increase in the number of radiotherapy facilities in the country, both public and private. New regulations regarding protection against the hazards of radiation will also require additional medical physicists. In the past, vacancies have often been filled from abroad. However, the shortage of medical physicists in the U.S. and U.K. will mean that this supply can no longer be relied upon. Opportunities also exist in specialist medical device industries and in academic research.

M.SC. (REGENERATIVE MEDICINE)

Regenerative Medicine is a discipline which generates novel therapeutics to mediate repair and generation of damaged and diseased organs. These therapeutics are based on stem cells, gene therapy, biomaterials, engineering tissue and other biologically active compounds. This 12 month taught programme aims to provide graduates in life sciences, biomedical engineering, nursing or medicine with an understanding of Regenerative Medicine and to equip them with the skills necessary for a career in this emerging discipline.

PROGRAMME AIMS AND OBJECTIVES

This programme aims to provide graduates with an understanding of Regenerative Medicine integrating information, technologies and skills from biological sciences, engineering, legal and ethical disciplines. These modules will address the science behind Regenerative medicine, its application to human disease and its importance to modern society.

ECTS

90 ECTS

COURSE MODULES

Compulsory modules

Fundamental Concepts in Pharmacology	PM208	5 ECTS
Translational Medicine	REM502	5 ECTS
Scientific Writing	BES519	5 ECTS
Immunology	REM508	5 ECTS
Tissue Engineering	BME405	5 ECTS
Advanced Tissue Engineering	BME502	5 ECTS
Advanced Research Techniques	REM503	10 ECTS
Regenerative Medicine	REM504	10 ECTS
Research Project	REM505	30 ECTS
Total		80 ECTS

Optional modules

Students will select options worth 10 ECTS

Anatomy	AN230	5 ECTS
Applied Concepts in Pharmacology	PM209	5 ECTS
Data Analysis for Genomics Technologies	MA570	5 ECTS
Physiology Human Body Function Module	SI3 17	10 ECTS
Introduction to Business	MG529	10 ECTS
Introduction to Biostatistics	MD511	10 ECTS
Introduction to Bio-informatics	MA324	5 ECTS
Economic Evaluation in Healthcare	EC584	5 ECTS

This programme is open to students who have obtained at least a Second Class Honours degree in an appropriate biological science, biomedical engineering, medicine or nursing. Students who have a degree without Honours in a related area and have 3 or more years of practical experience in the subject area will also be eligible to apply for this programme.

CAREER OPPORTUNITIES

This programme will equip students for careers in biomedical research and development in an academic or industrial setting. Graduates will also receive training relevant to clinical research, translational research and clinical trial management. Over 60% of the graduates from this course go on to Ph.D. studentship based throughout Ireland, the UK, France, The Netherlands, Spain, Austria, America, and Canada.

M.S.C. (CLINICAL RESEARCH)

PROGRAMME DESCRIPTION

The objective of this course is to provide training for the next generation of healthcare workers in the clinical research arena, providing a platform for more enhanced efficiencies in the translation of medical discoveries into clinical practice. Course contributors include senior academics and medical professionals from NUI Galway, Galway University Hospitals and McMaster University, Canada, who are actively engaged in clinical research. This programme is closely linked with the HRB Clinical Research Facility, Galway. Aimed at individuals employed in the healthcare sector, this course has been developed to meet the needs of working graduates who wish to up-skill, specialise or change career direction. For further details of the course, see www.crfg.ie

The MSc in Clinical Research is intended to be a part-time two-year programme of academic study in Clinical Research Methodology. Year 1 will be spent at NUI Galway and Year 2 is completed by a combination of distance learning through modules delivered by McMaster University and NUI Galway, and on-site modules delivered by NUI Galway. A full-time 1-year option is available to students who wish to complete the MSc in a full-time capacity

This course is delivered through blended learning, to include lectures, tutorials, problem based learning (PBL) and distance learning.

NUI GALWAY CODE:

GYM56 (Full Time); GYM57 (Part-Time)

PROGRAMME AIMS AND OBJECTIVES

- To understand quantitative and qualitative research approaches, understand their strengths and limitations and to learn how to apply research approaches and methods by completing weekly assignments and preparing a research protocol in own area of interest
- To examine data analysis, statistical concepts and thinking on a practical level, to apply simple statistical techniques to design, analyse and interpret studies in a wide range of disciplines and to utilise a computer statistical package to illustrate the power of statistical techniques.
- To provide an in-depth understanding of sampling, causation, survey research, cohort study (retrospective and prospective), case-control, bias in observational research, multivariable analysis and propensity analysis
- To provide an appreciation and understanding of the main elements of clinical trial design, execution, and analysis. At the end of the course, students should

have a firm grasp of clinical trial methodology at a level that would allow them to prepare successful grant applications.

- To provide an understanding of systematic review methods and the execution of a rigorous systematic review. Students will be introduced to the review methodology outlined in the Cochrane Handbook for Systematic Reviews and will explore concepts and controversies in review methods.
- To provide an in-depth understanding of the translational process to enable development of therapeutic strategies, GLP, the clinical trial process and GMP manufacturing and validation, regulatory and legislation requirements for the design and translation of medical therapies and ethical issues underpinning the practice of translational medicine.
- To examine the various elements involved in the establishment and operation of clinical research facilities and clinical trials, procedures for successful completion and reporting of clinical trials and financial management issues.

ECTS WEIGHTING 90 ECTS.

MINIMUM ENTRY REQUIREMENTS

Students must have completed either; 1) Undergraduate degree in medicine or; 2) Other healthcare-related undergraduate degree with a minimum of 2nd Class Honours degree, Grade 1 (including Nursing, Occupational therapy, Physiotherapy, Speech and Language Therapy and Pharmacy) or; 3) Biomedical sciences with a minimum of 2nd Class Honours degree, Grade 1. Application from graduates of non-healthcare related degrees are also considered (minimum requirement of 2nd Class Honours, Grade 1) on a case-by-case basis, at the discretion of the admissions committee. Students who have a degree without Honours in a related area and have 3 or more years of practical experience in the subject area will also be considered for this programme. Potential students should be seeking a career in clinical research as a principal investigator, research coordinator or research administration.

COURSE OUTLINE:

FULL TIME M.SC. (CLINICAL RESEARCH): Students are required to complete three compulsory modules at NUI Galway. A further 3 modules are selected from additional courses available at NUI Galway and/or by distance learning with McMaster University.

PART TIME MSC. (CLINICAL RESEARCH): Students are required to complete three compulsory modules at NUI Galway. A further 3* or 5** modules are selected from additional courses available at NUI Galway and/or by distance learning with McMaster University.

Compulsory Modules (Core):

1. Fundamentals of Health Research and Evaluation Methods; 10ECTS
2. Introduction to Biostatistics I; 10ECTS
3. Ethics of Health Research; 10ECTS

Additional Modules (Optional):

SELECT 3 FROM THE FOLLOWING:

4. Introduction to Biostatistics II; 10 ECTS
5. Introduction to Research Methods for Randomized Controlled Trials; 5-10ECTS
6. Systematic Review Methods; 5 - 10ECTS
7. Translational Medicine; 5 - 10ECTS
8. Clinical Research Administration; 10ECTS
9. Health Systems and Policy Analysis; 10ECTS
10. Economic Evaluation in Healthcare; 10ECTS
11. Observational and Analytical Research Methods; 10ECTS
12. Project Management; 5 ECTS
13. Database Development; 5 ECTS

PLUS

Full Time: Thesis (30 ECTS), completed over the 1 year period. Thesis defence will be completed at NUI Galway.

Part Time: *Thesis (30 ECTS), completed over the 2 year period. Thesis defence will be completed at NUI Galway **OR **Independent Study Module** (10 ECTS), completed and assessed by NUI Galway.

TOTAL: 90 ECTS over 1 year (FT) or 2 years (PT).

Module assessment: Departmental assessment, end of module exam, interim assignments or as directed by module leader.

Minimum threshold of students per module will apply

CAREER OPPORTUNITIES

The MSc program provides training for qualified individuals (see entry requirements below) who wish to become independent clinical investigators **or** those who wish to seek employment in leadership positions in clinical research teams. The conduct and oversight of clinical research has become a prominent source of jobs in a variety of settings, including university and colleges, pharmaceutical industry, non-academic clinical research organizations, independent funding agencies and government agencies. Additional opportunities include employment in teaching and consultation.

POSTGRADUATE DIPLOMA IN PREVENTIVE CARDIOLOGY

Introduction

The scientific evidence for cardiovascular disease prevention is compelling but translating this evidence into effective patient care is a challenge. This innovative programme in Preventive Cardiology, delivered in the Croí Heart and Stroke Centre, provides students with the knowledge and practical skills required to bridge this implementation gap and achieve the recommended lifestyle and therapeutic targets. This programme is associated with the founding programme at Imperial College London (UK) and they are the only courses of their kind available worldwide.

Course Facts

Course Level: Level 9

Duration: 1 year full-time in service (MSc); 9 months full-time in service (PG Diploma), using blended learning

Entry Requirements: Successful applicants will possess at least a Second Class Honours, Grade 1 degree in an appropriate life science, biological science, medicine or nursing. For those who do not hold a primary degree at the required level, a special case will be made if they have demonstrated aptitude for the course material through at least 3 years of high quality work experience in a relevant field of cardiovascular health. Entry to the Masters programme is conditional upon achieving at least 60% in the core compulsory modules of the Postgraduate Diploma. Candidates coming to Ireland from abroad or who do not have a degree from Ireland or the UK will be asked to provide evidence of an acceptable result in one of the recognised English language proficiency tests, e.g. IELTS total score of 6.5.

Applying: www.pac.ie/nuigalway

PAC Code: 1MPY1 (MSc); 1MPY3 (PG Dip)

Closing Date: Open call

Why study this programme?

This course equips students with the knowledge and skills required to make meaningful contributions to the discipline of preventive cardiology. The taught modules address the development and practical use of cardiovascular disease risk estimation tools, implementation of healthcare policy, behavioural change strategies, lifestyle approaches to risk factor modification and medical management of risk factors including hypertension, dyslipidaemia, diabetes mellitus, obesity and smoking. Students have the opportunity to actively engage with patients participating in a preventive cardiology programme at the Croí Heart and Stroke Centre in Galway. Small group case-based discussions and clinical activities supplement the didactic lecture programme. The course has online learning and guided self-directed learning dimensions as well as residential elements, enabling students to adapt their learning to their professional lives. Contributors are drawn from clinical departments at Galway University Hospitals, scientific and healthcare disciplines at NUI Galway, the Croí clinical team, and the International Centre for Circulatory Health at Imperial College London.

Programme outline

The core compulsory modules cover all relevant topics to ensure a comprehensive student learning experience. The elective advanced module includes a specialist area aligned with the student's own professional interests to be studied in greater depth at a higher level.

Core Compulsory Modules:	ECTS	Semester
Fundamentals of Preventive Cardiology	10	1
Research Methods	10	1
Reflective Clinical Practice	10	1
Research Project and Dissertation*	30	2
Elective Advanced Modules**:		
Cardiovascular Risk, Guidelines and Policy	30	2

Medical Risk Factor Management	30	2
Lifestyle Risk Factor Modification	30	2

*Only MSc candidates complete an original research project and dissertation

**Students select one elective advanced module from the 3 options available

Employment and career opportunities

The course is undergoing formal accreditation for CME/CPD purposes. Graduates of the course will be positioned as leaders in cardiovascular disease prevention and will find ample opportunities to apply their learning in primary care centres, hospital wards and outpatient clinics. There will also be employment opportunities in the pharmaceutical industry and in public health, healthcare management, academic and research settings. Clinician graduates will benefit from career advancement within their chosen disciplines. Masters students completing the 5,000-word 'ready-for-publication' dissertation will be supported in preparing their work for submission to a peer-reviewed journal which will further augment their career prospects.

Unique and Dedicated Learning Environment

Both didactic and clinical teaching on this course will be delivered at the Croí Heart and Stroke Centre in Galway. This facility is adjacent to NUI Galway and University Hospital Galway. It is the first purpose-built centre of its kind in Europe dedicated to cardiovascular disease prevention and rehabilitation. The project is a flagship initiative for the promotion of cardiovascular wellbeing, with a strong focus on prevention, rehabilitation, education, and patient and family support. It operates as an institute for teaching and training, education and research; a centre for healthy living; and a centre for patient and family support.

MASTER/ PG DIPLOMA IN (MULTI-DISCIPLINARY RADIOLOGY)

Commencing:	September 2014
Duration:	2 years.
Mode:	Part-time.
Credits:	90 ECTS (master), 60 ECT (PG Dip.) or 30 (PG Cert.).
Level:	9

Rationale

Diagnostic imaging had witnessed major technological advances over the last few decades, particularly in its cross-sectional and interventional aspects. Medical practice had also witnessed a parallel major transition in decision-making, from individual expert consultant decisions to multi-disciplinary team care provision. Radiology plays a major role in multi-disciplinary care, and many specialists depend on imaging for clinical decision beyond the traditional dependence on reading the text of a radiologist report to better ability to analyse diagnostic images in an era of broadly available digital images accessible through workstations in clinics, operating theatres and wards.

Demand

In the absence of formal rotation in Radiology in internship or basic training for medical or surgical, there is a growing need to introduce doctors to the expanding field of diagnostic imaging. This course will give many doctors the opportunity to taste Radiology as a future career, and would equip those who chose Radiology as a career with clinical research and other optional generic skills, like teaching and relevant medical informatics. With the limitation of access to Radiology training infrastructures worldwide, such course will be designed in a flexible format using blended learning to avail opportunities for overseas doctors to come over to Ireland and interact with their peers in Ireland, and experience a simulation of multi-disciplinary decision-making through the mandatory face-to-face component of all modules. The modular format can be considered as study support standalone courses towards covering major core topics in postgraduate Radiology training programmes and exams.

Learning Outcomes

By the end of the course the learners will be able to:

1. Demonstrate understanding of broad basic science concepts that have direct contribution to the production and interpretation of imaging modalities as physics, radiologic anatomy, embryology, pathological process and treatment pathways.

2. Demonstrate understanding of the role of different imaging modalities in diagnosis and treatment of commonly encountered clinical problems. This should include understanding of indications, contraindications, sensitivity, specificity, advantages and disadvantages of different modalities.
3. Identify a commonly encountered radiological investigation and audit the local adoption of local, national or international guidelines relevant to at least one common problem.
4. Demonstrate understanding of common interventional procedures indications, theoretical steps and provide proof of observing few procedures relevant to their day to day practice in their workplace or other accessible institution elsewhere.
5. Demonstrate understanding of commonly encountered paediatric radiology problems.
6. Present, discuss and document multi-disciplinary recommendations about common and some uncommon cases.
7. Coordinate, research, present and discuss a selected imaging topic in a group presentation.

Target group:

Health professionals who have direct relation to multidisciplinary meeting involving imaging in decision making or who have clearly defined future role (contract, training scheme) including:

1. Practicing Radiologists who would like to obtain a postgraduate degree, and improve their research or other imaging related generic skills.
2. Current or future trainees who would like to explore basic and clinical Radiology sciences at an introductory and foundation levels, and prepare for qualifying exams.
3. Optional stand-alone modules can be selected by other clinical staff working with heavy dependence on imaging in their clinical decision or procedures, (*e.g.*) breast triple assessment clinics, breast screening, vascular and non-vascular interventions.

Programme Entry Criteria

Minimum qualification & experience: MBBS or equivalent degree, or a relevant biomedical science BSc 2.1 with relevant experience requiring multi-disciplinary care, with routine dependence on imaging in routine decision-making and care provision process.

Selection Criteria

1. A personal statement is essential to explain the candidate need and suitability for such a course describing their basic qualification, previous experience, current and future roles requiring multi-disciplinary imaging interpretation skills.
2. Two reference letters from current or previous supervisors or teachers with contact details, including e-mail, postal address, fax and phone number.
3. Competence in English: minimum of IELTS overall score of 6.5, at least 6 in each component/or equivalent for those who did not complete at least one year full-time study or employment in English speaking country.

Programme Structure and Delivery Approach

The course will build on a mandatory core introductory module held in the second half of October of the first year. Candidates would need to accumulate further 50 credits from the available clinical and generic options, with at least two clinical modules relevant to their research area with the research module if they are proceeding to master level. 10-credit modules would normally have class-based component of 5-6 days conducted in one week to allow overseas participants to travel for short period every second or third month, and go back to their workplace in their home countries. Class-based activities include lectures, PBL, workshops, case presentations and simulated multi-disciplinary meetings. Each day will be designed independently, and can be attended in a stand-alone format with accredited CPD hours. While some modules will be available every year, some modules will be held every 2-3 years depending on the presence of satisfactory number (8-24) of participants.

As illustrated in **Figure-1**, participants who could not complete 60 credits towards PG / Diploma award can exit the course with a PG Cert, with 30 Credits or certificate of attendance of the introductory module or any stand-alone optional module or single day CPD equivalent.

Figure-1: illustrates exit points of the Master/PG Dip/cert. programme

Programme Content

In addition to the core introductory module, other modules options lie in two domains: 5 clinical (body system-based) and 3 generic modules as shown in **Figure 2**.

Introductory Basic Core module : (introduction to basic sciences for imaging: Physics Radiographic Anatomy modalities techniques)	5 optional Clinical modules	Genitourinary
		GIT
		CNS ,H&N
		Chest & CVS
		MSK
	3 Optional Generic modules	Clinical teaching
		Research methods
		Medical informatics & PACS

Figure-2: Generic, clinical and technical modules options:

Assessment Strategy

Assessment: Total Marks 100: 50 Marks for written (1200 words) Assignment or (1 x 1.5hr written Test (paper/ computer based, MCQ best of five format). Assignment submission dates would regularly be within 6-8 weeks of the end of the module taught course. There are 40 marks for group presentation and 10 marks for attendance & class-based participation. (5% attendance, 3% case submissions for MDT, 2% for educational coordinator and organisational activities). Presentation topics will be e-mailed to participants 4-6 weeks before the start of each module. Written tests would be conducted in a weekend preceding a following module till secure online computer-based exam can be adopted to avail flexible exam timing and location.

Marks and Standards

Pass Standard and any Special Requirements for Passing Module: 40%.

MSc Degree requires minimum score for overall 60%, 40% in all individual modules.

Penalties (for late submission of Course/Project Work etc.): 15% of the marks will be deducted in submission delay in the first week and 10% per week thereafter.

Appendix

Append appropriate Syllabus Forms (including new module forms if appropriate)

Modules details: *Attached document*

SCHOOL OF NURSING & MIDWIFERY

TAUGHT POSTGRADUATE CERTIFICATE, DIPLOMA AND MASTERS PROGRAMMES

(NFQ level 9 awards; *ref. www.nfq.ie*)

PLEASE NOTE THIS INFORMATION IS SUBJECT TO CHANGE AND CANDIDATES ARE ADVISED TO VISIT THE POST GRADUATE APPLICATION WEBSITE AT THE TIME OF APPLICATION

CERTIFICATE IN NURSING (NURSE/MIDWIFE PRESCRIBING)

This programme's development is in response to a need for nurses and midwives to prescribe, in order to support high quality person-centered care. Nurses and midwives prescribe within the confines of robust legislation and professional regulation and their scope of practice. Improving client care is core to this extended role.

PROGRAMME DURATION AND STRUCTURE

The programme is delivered over a six-month period. The modules are delivered in a blended learning format using a combination of Blackboard and workshops in college. In addition, students will be mentored in their practice setting for the duration of the programme which will include 12 days of direct supervision of the prescriptive process by a designated medical practitioner.

PROGRAMME CONTENT

The programme is comprised of three theory/practice modules and a clinical competency assessment in prescribing:

- Physical assessment skills
- Professional, Ethical & Legal Issues of Nurse and Midwife Prescribing
- Drugs, Patients and illness.
- Clinical competency –Prescribing

ENTRY CRITERIA

- Registered as a nurse or midwife on the live register of An Bord Altranais.
- Currently employed as a nurse or midwife.
- Minimum of three years recent post registration clinical experience in nursing or midwifery (within the last five years) with the equivalent of one-year full-time experience in the specific area of practice in which prescribing is proposed.
- Possession of the competencies recognised at level 8 of the National Framework of

Qualifications.

- Evidence of undertaking continuing professional education.
- Support from employer to undertake the programme as evidenced by a completed *Site Declaration Form*.
- Confirmation of a designated nurse/midwife/medical mentor as evidenced by a completed *Site Declaration Form*.

POSTGRADUATE CERTIFICATE (NURSING)

POSTGRADUATE DIPLOMA (NURSING)

The Postgraduate Certificate/Diploma (Nursing) allows the student to custom build a programme that meets continuing professional development requirements and further develop knowledge and skills or meet a specific service need. These programmes are designed to allow some choice in relation to modules in addition to the core modules. All modules are grounded in practice. These programmes have been specifically designed to meet the needs of busy practitioners, offering a truly flexible approach to learning. These programmes can be used as part of the evidence of prior learning as a stepping stone to “build” to other programmes.

PROGRAMME STRUCTURE/CONTENT AND DURATION

The *Postgraduate Certificate (Nursing) (30 credits)* is comprised of the following modules: "Using Research in Practice" or "Clinical Governance: Supporting Safe Practice" and any **two** modules of your choice from the list of modules. A completed Professional Credit Award (PCA) or stand-alone module using “Recognition of Prior Learning” can gain exemption/credit from corresponding programme module.

The *Postgraduate Diploma (Nursing) (60 credits)* is comprised of the following modules: "Using Research in Practice" and "Clinical Governance: Supporting Safe Practice" and any **four** modules of your choice from the list of modules on offer. A completed professional Credit Award (PCA) or stand-alone module or a Postgraduate Certificate (Nursing) or equivalent using “Recognition of Prior Learning” can gain exemption/credit from a corresponding programme module.

Modules 2013/2014 (10 ECTS)

Semester 1

- Care of the Child and Family with Life-limiting Illness
- Clinical Skills Development in Emergency Nursing
- Critical Issues in Chronic Disease Management
- High Dependency Maternity Care
- Intensive Care Nursing 1
- Intensive Care Nursing 2
- Perioperative Nursing 1: Physiological Effects of Surgery

- [Perioperative Nursing 2: Prevention of Injury](#)
- [Psychosocial Interventions: Evidence Based Recovery Practice](#) (New)
- [Recognising and Responding to Client Deterioration](#) (New)
- [Recovery for Mental Health Practice](#) (New)
- [Teaching Effectively](#)
- [Using Research in Practice](#) (Core)

Semester 2

- [Advanced Wound Care Management](#)
- [Best Practice in Cervical Smear Taking](#)
- [Cardiovascular Disease in Primary Care](#)
- [Clinical Governance: Supporting Safe Practice](#) (Core)
- [Collaboration and Interagency Working](#)
- [Dementia Care: Transforming Practice](#)
- [Diabetes in Primary Care](#)
- [Effective Chronic Disease Management Strategies for Health Care Professionals](#)
- [End of Life Care: Psychological and Social Perspectives](#)
- [Emergency Nursing 3 Specialist Patient Populations](#)
- [Engaging Students in their Learning](#)
- [Examination of the Healthy, Term Newborn Infant](#)
- [Intensive Care Nursing 3](#)
- [Introduction to Clinical Supervision: Supporting Continuing Professional Development](#)
- [Managing the Physical Health Needs of People with a Serious Mental Illness](#)
- [Perioperative Nursing 3: Prevention of Anaesthetic Complications](#)
- [Perioperative Nursing 4: Prevention of Surgical Complications](#)
- [Principles and Practice of Acute Medical Nursing](#) (New)
- [Respiratory Disease in Primary Care](#)
- [Transforming Nurses/Midwives' Research into Publication](#)
- [Women's Health in Primary Care](#)

ASSESSMENT

- Modules will be assessed using a combination of coursework, examination and OSCE. Each module is worth 100 marks with their relative weighting being determined by the allocation of credits. All modules have an equal weighting and students must pass all modules with a minimum of 50%.
- Compensation is not permitted between modules.
- A maximum of 50% only can be obtained in a module on repeat.

- The student must pass the competency element of the programme to successfully complete the programme.

These programmes are taken at the student's own pace. The duration of the Postgraduate Certificate ranges from one to three academic years while the Postgraduate Diploma ranges from one to five academic years.

ENTRY CRITERIA

Programme Entry Criteria

- Be a registered nurse or midwife on the Register maintained by An Bord Altranais agus Cnáimhseachais na hÉireann.
- Hold an active nursing or midwifery registration.
- Work in a clinical area where he/she is able to develop the clinical skills required to meet the learning outcomes of his/her chosen modules.
- Meet any other specified module entry requirements.
- Written evidence of support for the applicant from the Director of Nursing

SELECTION CRITERIA

All students that meet the entry criteria stipulated above will be eligible for acceptance on the programme.

POSTGRADUATE CERTIFICATE (MIDWIFERY)

The Postgraduate Certificate in Midwifery allows the student to develop knowledge and skills or to meet a specific service need. All modules are grounded in practice. The programme has been specifically designed to meet the needs of busy practitioners, offering a truly flexible approach to learning. The programme can be used as part of the evidence of prior learning as a stepping stone to “build” to other programmes.

PROGRAMME STRUCTURE/CONTENT AND DURATION

The *Postgraduate Certificate in Midwifery (30 credits)* is comprised of the following modules: "Using Research in Practice" or "Clinical Governance: Supporting Safe Practice" and two other modules. A completed Professional Credit Award (PCA) or stand-alone module using “Recognition of Prior Learning” can gain exemption/credit from corresponding programme module.

Modules: 2013/2014 (10 ECTS)

Semester 1

- High Dependency Maternity Care
- Using Research in Practice (Core)

Semester 2

- Clinical Governance: Supporting Safe Practice (Core)
- Examination of the Healthy, Term Newborn Infant

ASSESSMENT

- Modules will be assessed using a combination of coursework, examination and OSCE. Each module is worth 100 marks with their relative weighting being determined by the allocation of credits. All modules have an equal weighting and students must pass all modules with a minimum of 50%.
- Compensation is not permitted between modules.
- A maximum of 50% only can be obtained in a module on repeat.
- The student must pass the competency element of the programme to successfully complete the programme.
-

The programme is taken at the student's own pace. The duration of the Postgraduate Certificate in Midwifery ranges from one to three academic years

ENTRY CRITERIA

Programme Entry Criteria

- Be a registered nurse or midwife on the Register maintained by An Bord Altranais agus Cnáimhseachais na hÉireann.
- Hold an active nursing or midwifery registration.
- Work in a clinical area where he/she is able to develop the clinical skills required to meet the learning outcomes of his/her chosen modules.
- Meet any other specified module entry requirements.
- Written evidence of support for the applicant from the Director of Nursing

SELECTION CRITERIA

All students that meet the entry criteria stipulated above will be eligible for acceptance on the programme.

POSTGRADUATE CERTIFICATE IN NURSING (SPECIALIST PRACTICE)

The Postgraduate Certificate in Nursing (Specialist Practice) has been designed for newly graduated nurses. The broad aim of the programme is to build graduates confidence, knowledge and skills and to provide a foundation for further study. It is anticipated that students who complete the programme will progress to complete a Postgraduate Diploma in Nursing (Level 9) in a nursing specialism. The programme is delivered in partnership with the Galway Clinic.

PROGRAMME DURATION AND STRUCTURE

This programme aims to prepare new graduates to effectively manage (within their scope of practice) challenging acute care episodes. Its goal is to provide students with opportunities to broaden and deepen their theoretical knowledge and skills in caring for

acutely ill clients.

This programme is delivered over an academic year. This is a blended learning programme and is delivered using a combination of on-line learning and face-to-face skills teaching. Each module runs over a minimum of 12 weeks. Modules are developed into guided learning packs comprising of four to five units. Each pack provides a study guide for the student and includes, directed learning activities (both on-line and practice based), key reading, reflective points and e-tivities. Students will be supported on-line as they work through each unit, using the virtual learning environment BlackBoard. Students are expected to attend face to face workshops for a total of 9 days across the programme. The face-to-face teaching component (workshops) will take place at intervals throughout the semester. Workshops will focus on key skills and application.

Each module will run over twelve weeks.

ENTRY CRITERIA

In order to be considered for entry to the programme applicants must meet the following entry requirements:

- Hold an Honours Bachelor Degree at NFQ Level 8 in Nursing or a comparable qualification.
- Registration as a General nurse on the live register of An Bord Altranais agus Cnáimhseachais na hÉireann.
- Currently employed as a nurse.
- Provide a letter of support from his/her employer confirming that he/she will have the opportunity to work in the required range of specialist practice settings to meet the programme learning outcomes, or where necessary, agreement that the applicant will be freed to undertake additional practice in a suitable placement setting.

SELECTION CRITERIA

To be considered for admission to the programme applicants must meet the entry criteria as outlined above. Applications will be evaluated on the following :

- Applicant's academic record.
- Applicant's level of motivation and suitability based on his/her Personal Statement (submitted as part of the application)

PROGRAMME CONTENT

The programme comprises of three modules.

- Recognising and responding to client deterioration (Semester 1)
- Essential Physical Assessment Skills (Semester2)
- Clinical Governance: Supporting Safe Practice (Semester 2)

Students will complete two placements in specialist settings each of three months duration. On placement the student will be required to develop and implement a learning contract agreed with the programme director/clinical facilitator at the beginning of each placement. Students' skills competency will be assessed at two points in the programme (Semester 1 + Semester 2).

ASSESSMENT

Modules will be assessed using a combination of coursework, examination and OSCE. Each module is worth 100 marks with their relative weighting being determined by the allocation of credits. All modules have an equal weighting and students must pass all modules with a minimum of 50%.

Compensation is not permitted between modules.

A maximum of 50% only can be obtained in a module on repeat.

The student must pass the competency element of the programme to successfully complete the programme.

CLINICAL COMPETENCE

Clinical performance/progress of the student is assessed on an on-going basis throughout the practice placement and formally on two separate occasions (at the end of Semester 1 and Semester 2)

On successful completion of the programme students will be awarded the Postgraduate Certificate in Nursing (Specialist Practice). In order to be eligible for this award student must pass each module at 50%.

Students are required to complete a minimum of 500 hours clinical practice. The student must pass the competency element of the programme to successfully complete the programme.

POSTGRADUATE DIPLOMA IN NURSING (EMERGENCY CARE)

The Postgraduate Diploma in Nursing (Emergency) has been designed for registered nurses, who wish to pursue a specialist course in emergency care nursing. The Postgraduate Diploma is offered in partnership with the Health Service Executive.

PROGRAMME DURATION AND STRUCTURE

The aim of the programme is to develop knowledgeable sensitive practitioners who have a high level of specialist skills.

The programme is offered full-time over one calendar year and part-time over two calendar years. Taught components of the programme are delivered in a blended learning format and classroom teaching. Blended learning is an innovative teaching strategy which involves a combination of face-to-face and on-line learning. This means that learning/teaching will be delivered on-line through Blackboard, an interactive learning system which connects directly to the University from your own home computer. Students are required to attend face to face workshops for a total of 12 days across the programme (in blocks of 2 days at a time). The programme is comprised of seven theory/practice modules. In all modules there is an emphasis on exploring the relevance of module content to practice, similarly, practice placements allow students to explore "new" knowledge in practice, enabling them an opportunity to integrate theory and practice. Students are required to undertake their clinical practice in an approved clinical practice setting within Ireland normally within the students' own work setting. Students are required to complete a minimum of 1,000 clinical hours within the specialist area before completing this programme.

ENTRY CRITERIA

All applicants must meet the following entry requirements:

1. Be a registered nurse on the General Nurse division of the Register maintained by an Bord Altranais agus Cnáimhseachais na hÉireann.
2. Hold an active nursing registration.
3. Have a minimum of two years post-registration experience (exclusive of post-registration courses).
4. Be currently working in the required specialist area, i.e., emergency department, and have as a minimum six months clinical experience in this specialist area.
5. Hold a Bachelor Degree at NFQ Level 8 in Nursing or a comparable qualification.

Determining Equivalence: This is a level 9 programme. Applicants who do not hold an Honours degree or higher diploma (Level 8) may apply but must clearly demonstrate their capacity to complete a programme at this level. In addition to the other requirements outlined above, these applicants are required to submit a 1000-word literature-based essay. To be considered for admission, this essay must be at the level expected of an Honours degree candidate (Level 8).

Click [here](#) for more information on this essay.

SELECTION CRITERIA

To be considered an applicant must:

- Meet the entry criteria
- Obtain a letter from the candidate's Director of Nursing guaranteeing practice placements within Ireland, in the appropriate specialism for the duration of the programme, within the candidate's current place of work. Or, where necessary, additional appropriate clinical placements in order to meet clinical learning requirements.

PROGRAMME CONTENT

The programme comprises of seven modules of which two are generic/core and four are specialist exclusive to Emergency Nursing. Core modules and some aspects of specialist modules are taken in conjunction with students undertaking other Postgraduate Diplomas. Students will also undertake three practice assessments and a service improvement project.

The seven programme modules are listed below:

Core Modules:

- Clinical Governance: Supporting Safe Practice(core)
- Using Research in Practice(core)

Specialist Modules:

- Specialist Nursing Module 1 (Medical Emergencies)
- Specialist Nursing Module 2 (Major Trauma and Medical Emergencies)
- Specialist Nursing Module 3 (Specialist Patient Groups)
- Clinical Skills development in Emergency Nursing

Service Improvement Project

ASSESSMENT

The modules are assessed by means of continuous assessment and examinations. In order to be eligible for the award of the Post Graduate Diploma in Nursing Studies students must pass each of the modules of the programme with a minimum of 50%. Compensation is not permitted between modules. A Maximum of 50% can only be obtained in a module on repeat

Clinical competence must be demonstrated by:

- Students passing all performance criteria within each of the five domain of the clinical assessment and
- Students reaching the specified level of competence in the assessment overall.
- Three clinical assessments must be completed and passed to successfully complete the course

Students must have completed a minimum of 1000 clinical practice hours over the duration of the course.

Additional Issues:

Students must complete the programme within two years of commencement for the full time option, and within four years of commencement for the part time programme. Students who achieve an aggregate mark of 65% will be awarded the Post Graduate Diploma with distinction.

POSTGRADUATE DIPLOMA IN NURSING (ADVANCED PRACTICE)

This is a full-time programme running over one calendar year. Taught programme content is delivered over two trimesters and is offered in blended mode, workshops and on-line.

PROGRAMME CONTENT

Specialist practice modules address the context of advanced practice, physical assessment skills, pathophysiology, pharmacology and clinical decision making. Submission of a portfolio demonstrating competencies pertaining to advanced practice is required. Substantive hours of clinical practice at an advanced practice level and supervised by appropriate healthcare professionals is also integral to the programme.

ASSESSMENT

Each module is assessed independently. Strategies for assessment include essays, reflective practice assignments, presentations, clinical competency assessments and dissertation.

MINIMUM ENTRY CRITERIA:

- Master of Health Sciences (Nursing/Midwifery) or equivalent
- Be on the active Register as a nurse/midwife
- Have practiced as a nurse/midwife for a minimum of five (5) years post registration three (3) of which are in the specialist area
- Letters from the Director of Nursing and the appropriate health care professional Clinical Supervisor in support of the application.

POSTGRADUATE DIPLOMA IN NURSING (EDUCATION)

This programme is aimed at masters prepared graduates who wish to gain a teaching qualification. Broadly the programme aims to develop nurses/midwives expertise and understanding of teaching in higher education and clinical settings.

PROGRAMME DURATION AND STRUCTURE

This programme is aimed at Masters prepared graduates who wish to gain a teaching qualification. It aims to develop nurses'/midwives' expertise and understanding of teaching in higher education and clinical settings. The programme is facilitated on-line and learners attend for three-day workshops in semester 1 and two half days and one full day workshops in 2nd semester. A one-day introduction to the programme is offered the week prior to the programme commencing.

The programme is comprised of three taught modules and three competency assessments. To support learners' skill development, they are expected to complete 100 hours of teaching/facilitation during the programme. Learners are also expected to gain expertise in a wide range of teaching methods including lecturing, clinical teaching in both laboratory and clinical settings, and working with small groups using experimental approaches. Students are required to provide evidence of having completed:

- 30 hours experience of formal classroom based lecturing;
- 25 hours of clinical focused teaching which should comprise of both classroom based skills teaching and teaching in the clinical setting;
- 25 hours of small group work with a focus on experiential approaches, for example, seminars, workshops;
- 10 hours at the discretion of the student;
- 10 hour that demonstrates engagement and adoption of an innovative teaching methodology or technology.

PROGRAMME CONTENT

The programme is comprised of three taught modules, and three teaching assessments and the completion of an E-Portfolio. The modules are as follows:

Engaging Students in Their Learning
Designing for Learning
Teaching Effectively
Teaching Competency Assessment 1, 2, and 3
Electronic Teaching Portfolio (E-Portfolio)

ASSESSMENT

The programme is assessed by means of continuous assessment. In order to be eligible for the award of the Postgraduate Diploma in Nursing (Education) students must pass each module at 50% to be deemed to have passed the theoretical component and three teaching assessments to be deemed to have passed the practice component. Students must complete the required 100 hours of teaching practice in the areas specified. Compensation is not permitted. The standard for the award of a distinction is the attainment of 65% on the aggregate. Normally, a Distinction may be awarded only when the assessment is passed at the first attempt.

MINIMUM ENTRY CRITERIA:

Candidates must have successfully completed a Master in Nursing/Midwifery or its equivalent; be a registered nurse/midwife on the Register maintained by the Nursing and Midwifery Board of Ireland (NMBI); have practiced as a nurse/midwife for a minimum of three years post registration (exclusive of post-registration/educational programmes); have negotiated a placement in a Centre of Nurse/Midwifery Education which will provide them with the opportunity to meet the practice requirements of this programme.

SELECTION CRITERIA

Selection is based on applicant's academic and professional qualifications (as above). In order to register as a nurse tutor students must meet any requirements for registration identified by the NMBI.

POSTGRADUATE DIPLOMA IN NURSING (GERONTOLOGY)

The Postgraduate Diploma in Nursing (Gerontology) offered in partnership with the Health Service Executive West, has been designed for registered nurses who wish to pursue a specialist programme in caring for older people and their families. The overall goal of the programme is to further enhance nurses' ability to provide effective, appropriate, high quality nursing care for older people.

PROGRAMME DURATION AND STRUCTURE

The programme is offered full time over one calendar year and part time over two calendar years. It is comprised of theoretical and clinical components, commencing in September of each year. Taught programme content is delivered over two trimesters. Students also undertake practice placements in their own clinical setting.

PROGRAMME CONTENT

The programme is comprised of seven theory modules (three specialists, two core, one option, and a Service Improvement module) and three practice assessments. In all modules there is an emphasis on exploring the relevance of module content to practice. A blended learning approach is adopted in the delivery of this programme. Students continue to work in their own practice setting while undertaking the programme.

Modules:

Core Modules:

- Clinical Governance: Supporting Safe Practice (core)
- Using Research in Practice (core)

Specialist Modules:

- The Nature and Experience of Ageing
- The Nursing Care of Older People
- Promoting Health and Well-being
- Service Improvement

Clinical Competencies:

- Clinical Competence 1
- Clinical Competence 2
- Clinical Competence 3

One Option Module:

- Empowering Clients to Self Manage Chronic Disease or
- End of Life Care: Psychological and Social Perspectives or
- Advanced Wound Care Management or
- Continence Care or
- Introduction to Clinical Supervision or
- Living with Cancer of the Lower Urinary Tract
- Dementia Care: Transforming Practice

ENTRY CRITERIA

All applicants must meet the following entry criteria:

- A. Be a registered nurse on the General, Mental Health, or Learning Disability Nurse divisions of the Register maintained by An Bord Altranais agus Cnáimhseachais na hÉireann;
- B. be currently working in a setting in Ireland which requires him/her to care for older people and have as a minimum six months clinical experience in caring for older people within the previous two years
- C. Hold an Honours degree or a Bachelor Degree at NFQ Level 8 in Nursing or a comparable qualification. Applicants who do not hold an Honours degree are required to submit a literature based essay (1000 words) on a chosen topic with their application. It is important that the topic chosen is relevant to the programme being applied for. This will be judged to determine its equivalence to an Honours degree (or Level 8) programme
- D. Satisfy the selection panel that they have the ability to complete the programme

SELECTION CRITERIA

To be considered an applicant must:

- A. Meet the entry criteria
- B. Demonstrate an understanding of the demands of the programme and the motivation to complete the programme
- C. Demonstrate in his/her essay the potential to cope with the academic standards required
- D. Obtain a letter from the candidate's Director of Nursing guaranteeing practice placements in the appropriate specialism, for the duration of the programme, within the candidate's current place of work

ASSESSMENT

Modules are assessed by means of continuous assessment only.

Clinical competence must be demonstrated by:

Students passing all the competencies at the specified level of competence for each clinical assessment

Three clinical assessments must be completed and passed to successfully complete the programme.

In order to be eligible for the award of the Post Graduate Diploma in Nursing (Gerontology) students must

- pass each theoretical component at 50%

- pass three clinical assessments

Students must have completed a minimum of 1000 clinical practice hours over the duration of the programme.

Compensation is not permitted. A maximum of 50% can only be obtained in a module on repeat. The standard for the award of a distinction is the attainment of 65% on the aggregate.

POSTGRADUATE DIPLOMA IN NURSING (INTENSIVE CARE)

The Postgraduate Diploma in Nursing (Intensive Care) has been designed for registered nurses, who wish to pursue a specialist course in Intensive Care. The Postgraduate Diploma is offered in partnership with the Health Service Executive.

PROGRAMME DURATION AND STRUCTURE

The aim of the programme is to develop knowledgeable sensitive practitioners who have a high level of specialist skills.

The programme is offered full-time over one calendar year and part-time over two calendar years. Taught components of the programme are delivered in a blended learning format and classroom teaching. Blended learning is an innovative teaching strategy which involves a combination of face-to-face and on-line learning. This means that learning/teaching will be delivered on-line through Blackboard, an interactive learning system which connects directly to the University from your own home computer. Students are required to attend face to face workshops for a total of 12 days across the programme (in blocks of 2 days at a time). The programme is comprised of seven theory/practice modules. In all modules there is an emphasis on exploring the relevance of module content to practice, similarly, practice placements allow students to explore "new" knowledge in practice, enabling them an opportunity to integrate theory and practice. Students are required to undertake their clinical practice in an approved clinical practice setting within Ireland normally within the students' own work setting. Students are required to complete a minimum of 1,000 clinical hours within the specialist area before completing this programme.

ENTRY CRITERIA

All applicants must meet the following entry requirements:

- Be a registered nurse on the General Nurse division of the Register maintained by an Bord Altranais.
- Hold an active nursing registration.
- Have a minimum of two years post-registration experience (exclusive of post-registration courses).
- Be currently working in the required specialist area, i.e., Intensive Care, and have as a minimum six months clinical experience in this specialist area.
- Hold an Honours degree or hold a Bachelor Degree at NFQ Level 8 in Nursing or a comparable qualification.
- Determining Equivalence: This is a level 9 programme. Applicants who do not hold an Honours degree or higher diploma (Level 8) may apply but must clearly demonstrate their capacity to complete a programme at this level. In addition to the other requirements outlined above, these applicants are required to submit a 1000-word literature-based essay. To be considered for admission, this essay must be at the level expected of an Honours degree candidate (Level 8). Click [here](#) for more information on this essay.

SELECTION CRITERIA

To be considered an applicant must:

- Meet the entry criteria
- Obtain a letter from the candidate's Director of Nursing guaranteeing practice placements within Ireland, in the appropriate specialism for the duration of the programme, within the candidate's current place of work. Where the environment does not provide sufficient opportunities to meet the learning outcomes of the programme additional placements will be required by the student in sites which will provide the experience needed.

PROGRAMME CONTENT

The programme comprises of seven modules of which two are generic/core and four are specialist exclusive to Intensive Care Nursing. Core modules and some aspects of specialist modules are taken in conjunction with students undertaking other Postgraduate Diplomas. Students will also undertake three practice assessments and a service improvement project.

The seven programme modules are listed below:

Core Modules:

- Clinical Governance: Supporting Safe Practice (core)
- Using Research in Practice (core)

Specialist Modules:

- Specialist Nursing Module 1
- Specialist Nursing Module 2
- Specialist Nursing Module 3
- Specialist Nursing Module 4

Service Improvement Project

ASSESSMENT

The modules are assessed by means of continuous assessment and examinations. In order to be eligible for the award of the Post Graduate Diploma in Nursing Studies students must pass each of the modules of the programme with a minimum of 50%.

Compensation is not permitted between modules.

A Maximum of 50% can only be obtained in a module on repeat

Clinical competence must be demonstrated by:

- Students passing all performance criteria within each of the five domain of the clinical assessment and
- Students reaching the specified level of competence in the assessment overall.

- Three clinical assessments must be completed and passed to successfully complete the course

Students must have completed a minimum of 1000 clinical practice hours over the duration of the course.

Additional Issues:

Students must complete the programme within two years of commencement for the full time option, and within four years of commencement for the part time programme.

Students who achieve an aggregate mark of 65% will be awarded the Post Graduate Diploma with distinction.

POSTGRADUATE DIPLOMA IN NURSING (MENTAL HEALTH, COMMUNITY AND INPATIENT ACUTE CARE)

The Postgraduate Diploma in Nursing (Mental Health, Community & Inpatient Acute Care) is designed for registered nurses who wish to pursue a specialist in Mental Health,

Community and Inpatient Acute Care. It will prepare students to be flexible, competent and who can practice with confidence, and collaboratively within a variety of multidisciplinary care contexts. The aim of the programme is to develop knowledgeable, caring practitioners who have a high level of specialist skills in mental health nursing. This programme is offered in partnership with the Health Service Executive, West and Experts with Experience.

PROGRAMME DURATION AND STRUCTURE

The programme is offered full-time over one calendar year and part-time over two calendar years. It consists of both theoretical and clinical components. A blended learning approach is adopted in the delivery of this programme.

Students are required to attend face to face workshops for a total of 12 days across the programme (usually in blocks of 2 days at a time). The programme is comprised of seven theory/practice modules. In all modules there is an emphasis on exploring the relevance of module content to practice, similarly, practice placements allow students to explore "new" knowledge in practice, enabling them an opportunity to integrate theory and practice. Students are required to undertake their clinical practice in an approved clinical practice setting within Ireland normally within the students' own work setting. Students will need to demonstrate hours in both 'community' and 'in-patient acute' settings. This will be supported by a review of their current role to meet the requirements to work across the 'community' and 'in-patient acute' interface. Students are required to complete a minimum of 1,000 clinical hours before completing this programme.

ENTRY CRITERIA

All applicants must meet the following entry criteria

- A. be a registered nurse on the Psychiatric Nurse division of the Register maintained by an Bord Altranais
- B. hold an active nursing registration
- C. have a minimum of one year's post-registration experience (exclusive of post-registration courses)
- D. be currently working in a setting which requires him/her to care for the mentally ill clients and have as a minimum six months clinical experience in this specialist area.
- E. Satisfy the selection panel that they have the ability to complete the programme

Meet the following educational requirements:

- Hold an Honours degree or hold a Bachelor Degree at NFQ Level 8 in Nursing or a comparable qualification. Applicants who do not hold an Honours degree or equivalent will need to demonstrate the capacity to perform at this level. This requires writing a 1000 word literature based essay which will be judged to determine its equivalence to an Honours degree (or Level 8) programme.

SELECTION CRITERIA

To be considered an applicant must:

- Meet the entry criteria
- Demonstrate an understanding of the demands of the programme and the motivation to complete the programme
- Demonstrate in the potential to cope with the academic standards required
- Obtain a letter from the candidate's Director of Nursing guaranteeing practice placements within Ireland, in the appropriate specialism for the duration of the programme, within the candidate's current place of work. Or, where necessary, additional appropriate clinical placements in order to meet clinical learning requirements.

PROGRAMME CONTENT

The programme comprises of seven modules of which three are generic/core and three are specialist exclusive to Mental Health Nursing. Core modules and some aspects of specialist modules are taken in conjunction with students undertaking other Postgraduate Diplomas. Students will also undertake practice competencies and assignments.

The programme's theory/practice modules are listed below:

Collaboration and Interagency working (Specialist)

Professional Issues in Clinical Governance (Core)

Using Evidence Based Using research in practice (Core)

Partnerships in Mental Health Care (Service User/Carer/Service Provider) (Specialist)

Psychosocial interventions in Health Care (Specialist)

Service Improvement (Shared)

*Optional Module

Clinical Competency Competency 1, 2, and 3

*Students may select one (1) of the following optional modules:

- Managing the Physical Health Needs of People with a Severe Mental Illness
- Empowering Clients to Self-Manage Chronic Diseases
- Introduction to Clinical Supervision

ASSESSMENT

The modules are assessed by means of continuous assessment. In order to be eligible for the award of the Post Graduate Diploma in Nursing, students must pass all the above modules of the programme with a minimum of 50%.

Compensation is not permitted between modules.

A Maximum of 50% can only be obtained in a module on repeat

Clinical competence must be demonstrated by:

- Students passing all performance criteria within each of the five domains of the clinical competency assessment and
- Students reaching the specified level of competence in the assessment overall. Three clinical competencies must be completed and passed to successfully complete the programme.
- Students must have completed a minimum of 1000 clinical practice hours over the duration of the programme.

Additional Issues:

Compensation is not permitted. The standard for the award of a distinction is the attainment of 65% on the aggregate. Normally a distinction may be awarded only when the examination is passed at the first attempt and when all subjects are presented together.

POSTGRADUATE DIPLOMA IN NURSING (ACUTE MEDICINE)

The Postgraduate Diploma in Nursing (Acute Medicine) aspires to provide registered nurses with evidence based knowledge and training to expertly recognise, intervene, and manage acute changes in the complex presenting conditions of the patients in their care. The focus will be on consolidating and expanding their knowledge and skills in response to the need for early detailed assessment and development of initial treatment plans. The Postgraduate Diploma is offered in partnership with the Health Service Executive.

PROGRAMME DURATION AND STRUCTURE

The Programme is offered full-time over one calendar year. The programme is comprised of seven theory/practice modules and is delivered using a blended learning format, combining on-line learning and face-to-face workshops. This means that teaching/learning will be delivered on-line through Blackboard, an interactive learning system which connects directly to the University from any home computer. Students are required to attend face to face workshops for a total of 10 days across the programme. Workshops will employ a variety of teaching strategies including, problem focused lectures, skills teaching, simulated patient scenario based exercises, student-led seminars, small group learning and experiential learning. Case studies will be used to help students 'test' out what they would do in different situations. Students will simultaneously work in the clinical setting (usually their own work place) for the duration of the programme and will have to pass three clinical competencies and complete a minimum of 1000 hours in an acute medical unit or equivalent setting. Student learning in the clinical setting will be supported by their unit manager and named preceptor.

ENTRY CRITERIA

Programme Entry Criteria

- An Honours Bachelor Degree at NFQ Level 8 in nursing or a comparable qualification. Determining Equivalence: This is a level 9 programme. Applicants who do not hold an Honours degree or higher diploma (Level 8) may apply but must clearly demonstrate their capacity to complete a programme at this level. In addition to the other requirements outlined above, these applicants are required to submit a 1000-word literature-based essay. To be considered for admission, this essay must be at the level expected of an Honours degree candidate (Level 8).

Click [here](#) for more information on this essay.

- Registration as a General nurse on the live register of An Bord Altranais agus Cnáimhseachais na hÉireann
- Currently employed as a nurse in an acute medical unit (AMUs), acute medical assessment unit (AMAs) or medical assessment unit (MAUs) or an equivalent clinical setting that has a remit for caring for patients in the acute

stage of their medical illness. The applicants must have a minimum of 6 months experience in this setting over the past two years.

- Written evidence of support for the applicant from their Director of Nursing and clinical unit manager.
- Minimum academic and/or professional qualifications and standards required, together with any equivalence that may apply.

Selection Criteria

All students that meet the entry criteria stipulated above will be eligible for acceptance on the programme. Students will spend the majority of the placement in their own work setting. Its suitability in terms of equivalence i.e. a recognised acute medical unit (AMU, AMAU, MAU) for the programme will be assessed by the programme director in consultation with the unit manager from the acute medical unit of UCHG before the student starts the programme. Any deficits in learning opportunities identified (in terms of capacity to meet the programme learning outcomes) may require the student taking an additional practice placement in a recognised AMU to meet these outcomes. An audit of each clinical unit will be undertaken prior to students commencing their programme to determine its suitability and identify deficits that may impact on students achieving the programme learning outcomes.

PROGRAMME CONTENT

The programme comprises of seven modules of which two are generic/core and four are specialist and related to acute medical Nursing. Core modules and some aspects of specialist modules are taken in conjunction with students undertaking other Postgraduate Diplomas. Students will also undertake three practice assessments and a service improvement project.

POSTGRADUATE DIPLOMA IN NURSING (CHILD AND ADOLESCENT MENTAL HEALTH)

The programme is comprised of 7 theory/practice modules, including a Service Improvement Project. In addition students will complete 3 practice assessments, one in each trimester. The overall course is viewed as interconnected and interdependent. In all modules there is an emphasis on exploring the relevance of module content to practice. Whilst undertaking the programme, students will continue to work in a setting caring for children/young people. Practice assignments are structured to allow students to explore “new” knowledge in the reality of their practice, thus providing them with an opportunity to integrate theory and practice

PROGRAMME STRUCTURE & DESIGN

This programme aims to further enhance nurses’ ability to provide effective, appropriate, high quality, evidence-based care for children/young people and their families. In all modules there is an emphasis on developing and improving clinical practice. Students will be challenged to critically examine the relevance and applicability of the content explored in class to their own practice. An important objective of this programme is to encourage students to develop into competent, knowledgeable and compassionate professionals, who have the ability to respond positively to children and adolescents whose autonomy, self- confidence and self-esteem may be altered by virtue of their mental distress; assisting with the resultant impact on families/carers.

THEORETICAL INSTRUCTION

On successful completion of the programme, students will be awarded a Postgraduate Diploma in Nursing (Child and Adolescent Mental Health). Taught components of the programme are delivered via a blended learning format and classroom teaching. Blended learning is an innovative teaching strategy which involves a combination of face-to-face and on-line learning. This means that some learning/teaching will be delivered on-line through Blackboard, an interactive learning system which connects directly to the University from your own home computer. Students are required to attend face-to-face workshops for a total of 12 days across the programme. In all modules there is an emphasis on exploring the relevance of module content to practice. Similarly, practice placements (largely in students' own work setting) allow students to explore “new” knowledge in practice, allowing an opportunity to integrate theory and practice. Students are required to complete a minimum of 1000 hours clinical practice over the duration of the programme.

DURATION

This programme is offered full-time over one calendar year commencing in September of each year.

ENTRY CRITERIA

All applicants must meet the minimum academic requirements:

- Be a registered psychiatric nurse according to An Bord Altranais' stipulations.
- Hold an active nursing registration with An Bord Altranais.
- Hold an Honours degree or hold a Bachelor Degree at NFQ Level 8 in Nursing or a comparable qualification.
- Have practiced as a nurse for a minimum of one year post registration (excluding post registration/educational programmes).
- Have a minimum of six months experience working in a child and adolescent mental health setting, or a setting where they have gained experience working with children or adolescents with a mental health problem.
- Be currently working in a setting which requires him/her to care for children or adolescents with a mental health problem.

Those who do not hold an Honours degree or equivalent need to demonstrate the capacity to perform at this level. This requires writing a 1,000 word literature based essay which will be judged to determine its equivalence to an Honours degree (or Level 8) programme.

SELECTION CRITERIA

To be considered an applicant must:

- Meet the entry criteria
- Obtain a letter from the candidate's Director of Nursing guaranteeing practice placements within Ireland, in the appropriate specialism for the duration of the programme, within the candidate's current place of work. Or, where necessary, additional appropriate clinical placements in order to meet clinical learning requirements.

ASSESSMENT

	Trimester 1 (Sept. – Dec.)	Trimester 2 (Jan. – May)	Trimester 3 (June-Aug)
Module	<ul style="list-style-type: none">• Recovery for Mental Health Practice• Psychosocial Interventions: evidence based recovery practice• Using Research in Practice	<ul style="list-style-type: none">• Clinical Governance: Supporting Safe Practice• Wellness and Ill Health in Children and Adolescents• Clinical Supervision	<ul style="list-style-type: none">• Service improvement

All modules are assessed through continuous assessment, written coursework and examination. In order to be eligible for the award of a Postgraduate Diploma in Nursing (Child and Adolescent Mental Health) students must:

- pass each theoretical component at 50%
- pass three clinical assessments

Clinical competence must be demonstrated by:

- Students passing all the competencies at the specified level of competence for each clinical assessment
- Three clinical assessments must be completed and passed to successfully complete the programme.
- Students must have completed a minimum of 1000 clinical practice hours over the duration of the programme.

Additional Issues:

Students must complete programme within two years of commencement.

Please note that the programme offered is subject to sufficient numbers.

PLEASE NOTE THIS INFORMATION IS SUBJECT TO CHANGE AND CANDIDATES ARE ADVISED TO VISIT THE POST GRADUATE APPLICATION WEBSITE AT THE TIME OF APPLICATION

POSTGRADUATE DIPLOMA IN NURSING (PALLIATIVE CARE)

The Postgraduate Diploma in Nursing Studies (Palliative Care) is designed for registered General, Mental Health or Intellectual Disability nurses who wish to pursue a specialist programme in Palliative Care. Each module is designed to provide students with a theoretical framework from which they can explore and integrate theory & practice. This programme aims to:

1. Provide students with knowledge and skills to enhance palliative nursing practice.
2. Prepare nurse practitioners for entry to specialist nursing practice

PROGRAMME STRUCTURE & DESIGN

The programme is comprised of seven theory/practice modules. Core modules and some aspects of specialist modules are taken in conjunction with students undertaking other Postgraduate Diplomas. Modules are listed below:

- Clinical Governance: Supporting Safe Practice (Core)
- Collaboration & Interagency Working or Clinical Supervision (Core)
- Using Research in Practice (Core)
- End of Life Care: Psychological & Social Perspectives (Specialist)
- Palliative Approaches to Symptom Management (Specialist)
- Care of the Child and Family with a Life Limiting Illness (Specialist)

- Service Improvement (Core)

THEORETICAL INSTRUCTION

The content of this programme is delivered over three trimesters, comprising of lectures, workshops, seminars, the reading and preparation of assignments and clinical practice in the specialist area. The programme is offered full-time over one calendar year and part-time over two calendar years. Taught components of the programme are delivered in a blended learning format and classroom teaching. Blended learning is an innovative teaching strategy which involves a combination of face-to-face and on-line learning. This means that learning/teaching will be delivered on-line through Blackboard, an interactive learning system which connects directly to the University from your own home computer. Students are required to attend face to face workshops for a total of 12 days across the programme. In addition to clinical experience gained in the students' own work setting, all students undertake two alternative clinical placements as part of the programme

DURATION

The programme is delivered on a full-time/part-time basis commencing in September of each year.

INTAKE

There is one intake per year.

ENTRY CRITERIA

All applicants must meet the following entry requirements:

- Be a registered nurse on the General, Mental Health or Intellectual Disability Nurse division of the Register maintained by an Bord Altranais.
- Hold an active nursing registration.
- Have a minimum of two years post-registration experience (exclusive of post-registration courses).
- Be currently working in the required specialist area and have as a minimum six months clinical experience in this specialist area.

Hold an Honours degree or hold a Bachelor Degree at NFQ Level 8 in Nursing or a comparable qualification.

- Determining Equivalence: This is a level 9 programme. Applicants who do not hold an Honours degree or higher diploma (Level 8) may apply but must clearly demonstrate their capacity to complete a programme at this level. In addition to the other requirements outlined above, these applicants are required to submit a 1000-word literature-based essay. To be considered for admission, this essay must be at the level expected of an Honours degree candidate (Level 8). Click [here](#) for more information on this essay.

SELECTION CRITERIA

To be considered an applicant must:

- Meet the entry criteria

- Obtain a letter from the candidate's Director of Nursing guaranteeing practice placements within Ireland, in the appropriate specialism for the duration of the programme, within the candidate's current place of work. Or, where necessary, additional appropriate clinical placements in order to meet clinical learning requirements.

ASSESSMENT

All modules are assessed through continuous assessment, written coursework and examination. In order to be eligible for the award of a Postgraduate Diploma in Nursing (Palliative Care) students must:

pass each theoretical component at 50%

pass three clinical assessments

Core Modules:

- Nursing Clinical Governance: Supporting Safe Practice
- Using Research in Practice
- Collaboration and Interagency Working or Clinical Supervision

Specialist Modules:

- Palliative approaches to symptom management
- End of life care: psychological and social perspectives
- Care of the child and family with a life-limiting illness

Service Improvement Project

ASSESSMENT

The modules are assessed by means of continuous assessment. In order to be eligible for the award of the Post Graduate Diploma in Nursing Studies students must pass each of the modules of the programme with a minimum of 50%.

Compensation is not permitted between modules.

A Maximum of 50% can only be obtained in a module on repeat

Clinical competence must be demonstrated by:

- Students passing all performance criteria within each of the five domain of the clinical assessment and
- Students reaching the specified level of competence in the assessment overall.
- Three clinical assessments must be completed and passed to successfully complete the course
- Students must have completed a minimum of 1000 clinical practice hours over the duration of the course.

Additional Issues:

- Students must complete the programme within two years of commencement for the

full time option, and within four years of commencement for the part time programme.

- Students who achieve an aggregate mark of 65% will be awarded the Post Graduate Diploma with distinction.

POSTGRADUATE DIPLOMA IN NURSING (PERIOPERATIVE)

The Postgraduate Diploma in Nursing (Perioperative) has been designed for registered nurses, who wish to pursue a specialist course in Perioperative Nursing. The Postgraduate Diploma is offered in partnership with the Health Service Executive.

PROGRAMME DURATION AND STRUCTURE

The aim of the programme is to develop knowledgeable sensitive practitioners who have a high level of specialist skills. The programme is offered full-time over one calendar year and part-time over two calendar years. Taught components of the programme are delivered in a blended learning format and classroom teaching. Blended learning is an innovative teaching strategy which involves a combination of face-to-face and on-line learning. This means that learning/teaching will be delivered on-line through Blackboard, an interactive learning system which connects directly to the University from your own home computer. Students are required to attend face to face workshops for a total of 12 days across the programme (in blocks of 2 days at a time). The programme is comprised of seven theory/practice modules. In all modules there is an emphasis on exploring the relevance of module content to practice, similarly, practice placements allow students to explore "new" knowledge in practice, enabling them an opportunity to integrate theory and practice. Students are required to undertake their clinical practice in an approved clinical practice setting within Ireland normally within the students' own work setting. Students are required to complete a minimum of 1,000 clinical hours before completing this programme.

ENTRY CRITERIA

All applicants must meet the following entry requirements:

1. Be a registered nurse on the General Nurse division of the Register maintained by an Bord Altranais.
2. Hold an active nursing registration.
3. Have a minimum of two years post-registration experience (exclusive of post-registration courses).
4. Be currently working in the required specialist area, i.e., perioperative department, and have as a minimum six months clinical experience in this specialist area.
5. Hold an Honours degree or hold a Bachelor Degree at NFQ Level 8 in Nursing or a comparable qualification.

Determining Equivalence: This is a level 9 programme. Applicants who do not hold an Honours degree or higher diploma (Level 8) may apply but must clearly demonstrate their capacity to complete a programme at this level. In addition to the other requirements outlined above, these applicants are required to submit a 1000-word literature-based essay. To be considered for admission, this essay must be at the level expected of an Honours degree candidate (Level 8). Click [here](#) for more information on this essay (online Calendar only).

SELECTION CRITERIA

To be considered an applicant must:

- Meet the entry criteria

Obtain a letter from the candidate's Director of Nursing guaranteeing practice placements **within Ireland**, in the appropriate specialism for the duration of the programme, within the candidate's current place of work. Where the environment does not provide sufficient opportunities to meet the learning outcomes of the programme additional placements will be required by the student in sites which will provide the experience needed.

PROGRAMME CONTENT

The programme comprises of seven modules of which two are generic/core and four are specialist exclusive to Perioperative Nursing. Core modules and some aspects of specialist modules are taken in conjunction with students undertaking other Postgraduate Diplomas. Students will also undertake three practice assessments and a service improvement project.

The seven programme modules are listed below:

Core Modules:

- Clinical Governance: Supporting Safe Practice (core)
- Using Research in Practice (core)

Specialist Modules:

- Perioperative Nursing 1: Physiological Effects of Surgery
- Perioperative Nursing 2 : Prevention of Injury
- Perioperative Nursing 3: Prevention of Anaesthetic Complications
- Perioperative Nursing 4: Prevention of Surgical Complications

Service Improvement Project

ASSESSMENT

The modules are assessed by means of continuous assessment. In order to be eligible for the award of the Post Graduate Diploma in Nursing Studies students must pass each of the modules of the programme with a minimum of 50%.

Compensation is not permitted between modules.

A Maximum of 50% can only be obtained in a module on repeat

Clinical competence must be demonstrated by:

- Students passing all performance criteria within each of the five domain of the clinical assessment and
- Students reaching the specified level of competence in the assessment overall.
- Three clinical assessments must be completed and passed to successfully complete the course

- Students must have completed a minimum of 1000 clinical practice hours over the duration of the course.

Additional Issues:

- Students must complete the programme within two years of commencement for the full time option, and within four years of commencement for the part time programme.
- Students who achieve an aggregate mark of 65% will be awarded the Post Graduate Diploma with distinction.

POSTGRADUATE DIPLOMA IN NURSING (PUBLIC HEALTH NURSING)

The Postgraduate Diploma in Nursing (Public Health Nursing) programme is aimed at nurses who wish to work in the community setting as a public health nurse. The experience of health is both socially and culturally determined with the achievement of maximum health potential influenced by the wider determinants of health. The Public Health Nurse has a unique role in recognizing the wider realms of what impacts and determines community health and in facilitating maximum health potential. Nursing in the community involves the consideration and enablement of health care needs which demands both a clinical and public health focus of care. In considering this multifaceted function and the fact that primary health care and targeting population health is integral to community nursing practice, this programme aims to prepare students to competently meet the complex health care needs of the community as client.

In partnership with the relevant third level institutions the Health Services Executive Areas run a centralised funding application process for candidates. Sponsorship is offered by the Health Areas of the Health Service Executive to nurses who undertake the Postgraduate Diploma in Nursing (Public Health Nursing). Sponsorship must be secured by the candidate prior to commencement on the programme.

PROGRAMME DURATION AND STRUCTURE

The programme is offered full time over one calendar year. The taught programme content is delivered over three trimesters, Practice placements take place over the three trimesters enabling students to build the required competencies to work in the community setting.

PROGRAMME CONTENT

The programme is modular and is comprised of eight theory and six practice modules. Theory modules comprise of:

- Collaboration and Interagency Working
- Health across the Lifespan
- Promoting Health and Well Being
- Promoting Population Health
- Putting Research into Practice
- Public Health Nursing Praxis
- Service Improvement
- Child and Maternal Health (mandatory for non midwives, theory content optional for midwives and is recommended if greater than five years since midwifery practice)

Students will complete a number of community placements throughout the programme. An experienced Preceptor Public Health Nurse will supervise students on community placement. For students undertaking the child and maternal health module experienced

midwives will supervise practice placements in the maternity unit. Students' competency will be assessed on an on-going basis throughout the programme.

Professional practice assessments comprise of:

- Professional Assessment 1
- Professional Assessment 1 I
- Professional Assessment 1 I I
- Professional Assessment 1 V
- Professional Assessment V
- Professional Assessment 1 (Child and Maternal Health) (mandatory for non midwives)

ENTRY CRITERIA

All candidates must meet the following entry requirements:

- Be a registered nurse on the general division of the register maintained by An Bord Altranais entitled to be so registered
- Unless the candidate's name is registered in the midwives division of the register maintained by An Bord Altranais, the candidate must complete an An Bord Altranais (2005) approved module of study on Child and Maternal Health as part of the programme.
- Have a minimum of two years post-registration general experience in nursing , of which twelve months must be consecutive experience within the last 5 years. (exclusive of post-registration/educational courses)
- Hold an NQAI level 8 qualification (honors degree or higher diploma) or proof of equivalency.
- Fluency in English or evidence of level 7.0 proficiency.

Meet the following educational requirements:

- Applicants must satisfy the selection/admission committee that they have the ability to complete the programme
- Applicants who do not hold an honors degree or equivalent will need to demonstrate the capacity to perform at this level. This requires submission of APEL portfolio on application which will be judged to determine its equivalence to an honors degree (or Level 8) programme.
- Applicants must satisfy the selection/admission committee that they have a minimum of two years post registration experience in general nursing within the last 5 years (exclusive of post registration courses)

Successful candidates must have secured Health Service Executive sponsorship prior to commencement on the programme

SELECTION CRITERIA

To be considered an applicant must:

- A. Meet the entry criteria
- B. Demonstrate his/her potential to cope with the academic standards required
- C. Confirmation of placement on the programme is subject to the candidate confirming clinical placement for the duration of the programme from their relevant Director of Public Health Nursing.

ASSESSMENT

This programme is assessed by means of a combination of coursework, examination and competency assessment. In order to be eligible for the award of the Postgraduate Diploma in Nursing (Public Health Nursing) students must pass each component at 50%. The Professional Practice component requires students to attain identified competencies; to pass overall the student must pass all of the practice assessments. Professional assessment 111 must be completed in order to progress to professional assessment IV and V in the programme Compensation between modules is not permitted. The standard for the award of distinction is 65% on the aggregate. In order to register as a Public Health Nurse, students must meet any requirements for registration identified by An Bord Altranais.

HIGHER DIPLOMA IN MIDWIFERY

The Higher Diploma in Midwifery has been designed for registered nurses, who wish to undertake midwifery education and training. This programme enables the student to develop the knowledge and skills necessary to care for women and their babies during the antenatal, intra-natal and postnatal periods. The Higher Diploma in Midwifery is offered in partnership with the Health Service Executive West. The aims of this programme are:

1. To prepare the student to practice the activities of a registered midwife (The Council Directive 2005/36/EC) in order to contribute meaningfully to the physical, social, and psychological care of women and their babies.
2. To facilitate the student to develop both personally and professionally. Inherent in this, is the development of an analytical and reflective midwife who has the knowledge and skills to meet the demands of professional practice with competence and skill.

PROGRAMME STRUCTURE AND DURATION

The Higher Diploma in Midwifery is an 18 month full time programme consisting of a theoretical and clinical component. Theoretical instruction is of twenty-six weeks duration and is delivered in planned study blocks. Students undertake 10 theory modules over the course of the programme. The modules focus on: the application of the biological sciences to midwifery, normal midwifery care, social sciences (Sociology and Psychology), evidence based practice, caring for the woman experiencing complications during pregnancy and childbirth, caring for the neonate requiring special care, and issues in midwifery practice and women's health. Clinical placements are undertaken throughout the 18 months in the different clinical areas under the supervision of a preceptor.

The next intake of students is in March 2012 and students are salaried employees of the Health Service Executive West for the duration of the Programme.

ASSESSMENT

Theory and clinical practice modules are assessed by a combination of coursework and written examinations. In addition students' clinical performance/progress is assessed on an on-going basis while on placements, to determine competency. To be deemed competent students must attain the level specified in the Competency Assessment Tool, based on the Domains of Competence identified by An Bord Altranais. Students must pass both the theoretical, clinical and competency assessments to be deemed to have passed the programme.

In addition, in order for a student to apply to register as a Midwife with An Bord Altranais, he/she must complete the minimum clinical practice experience and minimum number of clinical hours required by An Bord Altranais.

ENTRY CRITERIA

Applicants must satisfy the matriculation requirements of the National University of Ireland and be Registered General Nurses as specified by An Bord Altranais. Candidates who are at least 23 years of age on January 1st of the year of registering for the Higher Diploma in Midwifery programme, and do not reach these requirements may be admitted on the grounds of mature years. All candidates must have twelve months relevant post-registration experience.

SELECTION CRITERIA

The programme is advertised by the National Recruitment Services for the Health Service Executive. Selection involves a formal written application, a personal interview, verification of medical fitness and satisfactory character references.

MASTER OF HEALTH SCIENCES

The School of Nursing & Midwifery offers (4) programmes, three taught and 1 research at the Masters level, Master of Health Sciences (Nursing) two years, Master of Health Sciences (Nursing/Midwifery Education) two years, Master of Health Sciences (Advanced Practice Nursing/Midwifery) two years, Master of Health Sciences (Specialist Nursing). These programmes have been designed to meet the needs of practicing nurses allowing the candidates to focus on their area of practice. The programmes are offered in blended mode, workshops and on-line.

MASTER OF HEALTH SCIENCES (NURSING)-TWO YEAR PROGRAMME

The programme comprises three (3) core modules, four (4) option modules, and a research dissertation.

PROGRAMME CONTENT

Theoretical and philosophical underpinnings of nursing practice; research methodology and evidence based practice; practice development and conduct of research form the framework for reflection on practice and exploration of aspects of practice.

ASSESSMENT

Each module is assessed independently. Strategies for assessment include essays, reflective practice assignments, presentations and dissertation.

ENTRY REQUIREMENTS

Upper 2nd class Honours degree in nursing or Nursing Studies at H2.1 or at H2.2 with appropriate experience; or Higher Diploma in Nursing/Midwifery Studies with appropriate experience; or meet the required standard in the Master in Health Sciences Qualifying Examination.

Be on the active Register as a nurse.

Have practiced as a nurse for a minimum of two (2) years post registration.

MASTER OF HEALTH SCIENCES (NURSING/MIDWIFERY EDUCATION) TWO YEAR PROGRAMME

The Master of Health Sciences (Nursing/Midwifery Education), Major Award, is at Level 9 on the National Framework of Qualifications. This two-year programme is aimed at nurses and midwives working in the public, voluntary or private sectors and it also aims to prepare nurses and midwives to be able to teach competently & confidently. Students are required to gain 100 hours of teaching experience over the two years. To increase programme accessibility, the programme will be delivered using blended

learning. Blended learning will combine face-to-face teaching and facilitated on-line learning. Face-to-face learning/teaching takes the form of 2 or 3 workshops (depending on the module) each semester. Students will therefore attend for 2 or 3 days a semester, plus an orientation day prior to the commencement of the first year.

PROGRAMME CONTENT

The programme comprises of seven taught modules, three specialist modules, four core modules of which one includes a research dissertation. Taught modules are subdivided into core (across all programmes at Masters level and specialist modules (unique to nursing/midwifery education). An E-Portfolio and three teaching competency assessments across the two years are also included.

100 hours of teaching practice is completed over the two years and is an integral part of the programme. To experience teaching at different levels it is expected that students gain experience of teaching at undergraduate/ postgraduate levels and in their work place.

The 100 hours are subdivided as follows:

- 30 hours experience of formal classroom based lecturing;
- 25 hours of clinical focused teaching which should comprise of both classroom based skills teaching and teaching in the clinical setting;
- 25 hours of small group work with a focus on experiential approaches, for example, seminars, workshops;
- 10 hours at the discretion of the student;
- 10 hours that demonstrates engagement and adoption of an innovative teaching methodology or technology.

ASSESSMENT

Each module is assessed independently. Strategies for assessment include essays, reflective practice assignments, presentations, competency assessment of teaching practice and dissertation.

ENTRY CRITERIA

- Upper 2nd class degree in nursing or Nursing Studies at H2.1 or at H2.2 with appropriate experience; or Higher Diploma in Nursing Studies with appropriate experience; or meet the required standard in the MHSc Qualifying examination
- Be on the active Register as a nurse/midwife
- Have practiced as a nurse/midwife for a minimum of three (3) years post registration
- A letter indicating that teaching practice has been negotiated in an educational establishment

AWARD

On successful completion of the programme students will be awarded A Master of Health Sciences (Nursing/Midwifery Education). In order to be eligible for this award, the student must pass each module at 50%. Compensation is not permitted between modules. The student must pass the competency element of the programme to successfully complete the programme. To be eligible to register candidates must meet in full the requirements for registration specified by Nursing and Midwifery Board of Ireland (NMBI).

MASTER OF HEALTH SCIENCES (ADVANCED PRACTICE NURSING/WITH PRESCRIBING MIDWIFERY)- two year programme

The programme comprises three (3) core modules, four (4) specialist modules, three (3) modules, clinical practice and a research dissertation.

PROGRAMME CONTENT

Theoretical and philosophical underpinnings of nursing practice; research methodology and evidence based practice; practice development and conduct of research form the framework for reflection on practice and exploration of aspects of practice. Specialist practice modules address the context of advanced practice, physical assessment skills, prescribing and pharmacology. Substantive hours of clinical practice at an advanced practice level and supervised by appropriate healthcare professionals over the 2 years is integral to the programme.

ASSESSMENT

Each module is assessed independently. Strategies for assessment include essays, reflective practice assignments, presentations, clinical competency assessments and dissertation.

ENTRY CRITERIA

- Upper 2nd class degree in nursing or Nursing Studies at H2.1 or at H2.2 with appropriate experience; or Higher Diploma in Nursing Studies with appropriate experience; or meet the required standard in the MHSc Qualifying examination.
- Be on the active Register as a nurse/midwife
- Have practiced as a nurse/midwife for a minimum of five (5) years post registration three (3) of which are in the specialist area
- Letters from the Director of Nursing and the appropriate health care professional Clinical Supervisor in support of the application.

STRUCTURED MASTER OF HEALTH SCIENCES (SPECIALIST NURSING) - ONE YEAR PROGRAMME

The one (1) year research programme comprises one (1) taught module and a research dissertation.

PROGRAMME CONTENT

Research methodology as evidenced by the ability to design and implement a research study; evaluation and application of research findings to practice.

ASSESSMENT

Each module is assessed independently.

ENTRY CRITERIA

- Have achieved an aggregate of 60% and successfully completed a Postgraduate Diploma in Nursing Studies at level 9
- Be on the active Register as a nurse
- Have practiced as a nurse for a minimum of two (2) years post registration

PROFESSIONAL CREDIT AWARDS

These modules provide the opportunity for nurses and midwives to fulfil and support learning needs identified during their clinical practice and therefore allows for their ongoing education and professional development. These modules are components of a recognised full-time programme- Post Graduate Diploma in Nursing offered by the School of Nursing and Midwifery, NUI Galway. Each module is worth 10 ECTS which may be credited towards further academic study. A Student taking a stand alone module is classed as an Occasional Student. These students however, are not on a programme leading to a Degree, Diploma or any other award of this University. These modules are delivered via blended learning which involves a combination of face to face and online learning. Modules are delivered over one semester.

Choose from the following modules:

Starting September (closing date June 28th 2013)

- Care of the Child and Family with Life-limiting Illness
- Clinical Skills Development in Emergency Nursing
- Critical Issues in Chronic Disease Management
- Intensive Care Nursing 1
- Intensive Care Nursing 2
- International Perspectives of Women's Health
- Managing Client Care in Specialist Settings (runs over full academic year)
- Perioperative Nursing 1: Physiological Effects of Surgery
- Perioperative Nursing 2: Prevention of Injury
- Principles of Orthopaedic Nursing
- Psychosocial Interventions 1
- Psychosocial Interventions 2
- Specialist Module 1: Medical Emergencies
- Teaching Effectively
- Using Research in Practice

Starting January (closing date 31st Oct, 2013)

- Advanced Wound Care Management
- Best Practice in Cervical Smear Taking ¹
- Cardiovascular Disease in Primary Care
- Clinical Governance: Supporting Safe Practice
- Collaboration and Interagency Working
- Continence
- Dementia Care: Transforming Practice
- Diabetes in Primary Care

¹For the module “Best Practice in Cervical Smear Taking” it is necessary to complete an additional application form (National Cervical Screening Programme). This is available @ cervicalcheck.ie

- Effective chronic disease management strategies for health care professionals
- End of Life Care: Psychological and Social Perspectives
- Engaging Students in their Learning
- Examination of the Healthy, Term Newborn Infant
- High Dependency Maternity Care
- Intensive Care Nursing 3
- Introduction to Clinical Supervision: Supporting Continuing Professional Development
- Managing the Physical Health Needs of People with a Serious Mental Illness
- Perioperative Nursing 3: Prevention of Anesthetic Complications
- Perioperative Nursing 4: Prevention of Surgical Complications
- Respiratory Disease in Primary Care
- Specialist Module 2: Major Trauma and Surgical Emergencies
- Specialist Module 3: Special Patient Groups
- The Context of Managing Healthcare
- Transforming nurses/midwives' research into publication
- Women's Health in Primary Care

ENTRY CRITERIA

All applicants for Professional Credit Awards must be:

- (a) A Registered Nurse/Midwife on the Live Register held by An Bord Altranais
- (b) Working in a clinical area where they are able to develop skills relevant to their chosen module.

SELECTION CRITERIA

Occasional students are considered for admission on the basis of their application, and considering the following points:

1. Meet the entry criteria
2. Their previous academic and current clinical practice
3. A personal statement outlining their current clinical role and their need for the stand alone module
4. Recommendation by the Programme Director concerned with module, in favour of the application.
5. Obtain a letter from the candidate's Director of Nursing guaranteeing clinical practice commensurate with the module content in the applicant's current place of work.

RESEARCH PROGRAMMES

THE DEGREE OF MASTER OF HEALTH SCIENCE (MHSC),
MASTER OF PHILOSOPHY (MPHIL)
MASTER OF SURGERY BY RESEARCH (MCH)
(LEVEL 9; REF.WWW.NFQ.IE)

GRADUATE RESEARCH OPTIONS

The College of Medicine, Nursing and Health Sciences offers the following postgraduate research masters degrees Master of Health Science, Master of Science by research and Master of Surgery (MCh) by research in the School of Medicine, MPhil in the School of Health Sciences and School of Nursing and Midwifery These programmes aim to prepare graduates to develop, improve and enhance knowledge and understanding in their chosen area of research.

MASTER OF HEALTH SCIENCE (PRIMARY CARE)

OVERVIEW

The MHSc research degree is a masters research programme offered by the School of Medicine which will equip students to successfully develop and carry out a piece of research within the primary care setting, and in doing so develop relevant expertise in research methodology.

The supervisor

The primary supervisor(s) is responsible for the overall management of the student's training and research project. The supervisor(s) must meet the criteria set out in the [University Guidelines](#) and fulfil the following:

- be an active scholar and researcher with good records of achievement and publication
- have a PhD in a suitable academic area or an equivalent record of achievement

Graduate Research Committee

Every research student and supervisor has the support of a Graduate Research Committee which is charged with ensuring compliance with basic good practices and will oversee student progress.

ENTRY REQUIREMENTS

Candidates should normally have an honours standard in a relevant academic discipline at primary degree level or equivalent. Entry to the Masters will usually follow successful completion of the Postgraduate Diploma in Primary Care or Clinical Primary Care. Applications may also be considered from candidates with relevant educational

background and experience. Selection is based on academic record and congruence of the candidate's thesis proposal with expertise and capacity for supervision within the Discipline of General Practice. The staff member must be approved by the College to supervise the research in terms of its nature and scope

Additional entry requirements

Candidates may be required to submit a research proposal for consideration by the School as part of their application.

DURATION

Normal duration of the MHSc programme is one calendar year, starting in September. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

Assessment is by examination of a written thesis. To be awarded a MHSc, a candidate must demonstrate that, in pursuance of an agreed project, he/she has met all of the following criteria:

- Has made a contribution to knowledge and scholarship
- Can display an appropriate depth and breadth of knowledge and understanding of the relevant field(s) of study
- Has gained a corresponding level of expertise with respect to relevant methodologies and techniques
- Has presented a thesis with the appropriate structure and written style

Evidence as to whether or not these criteria are met will be found in the thesis. An oral examination may be required.

For instructions regarding formatting and submission of thesis for examination see ['University Guidelines for Research Degree Programmes'](#)

MASTER OF PHILOSOPHY

OVERVIEW

The MPhil degree is a masters research programme which will prepare graduates to develop, improve and enhance knowledge and understanding in their chosen area of research. The School of Health Sciences offers MPhil degrees in Health Science,

Occupational Therapy, Podiatry, and Speech and Language Therapy. The School of Nursing and Midwifery offers MPhil degrees in Midwifery and Nursing,

The supervisor

The primary supervisor(s) is responsible for the overall management of the student's training and research project. The supervisor(s) must meet the criteria set out in the [University Guidelines](#) and fulfil the following:

- be an active scholar and researcher with good records of achievement and publication
- have a PhD in a suitable academic area or an equivalent record of achievement

Graduate Research Committee

Every research student and supervisor has the support of a Graduate Research Committee which is charged with ensuring compliance with basic good practices and will oversee student progress.

ENTRY REQUIREMENTS

Candidates should normally have a honours standard in a relevant academic discipline at primary degree level or equivalent together with the support of an academic staff member who is approved by the College to supervise the research in terms of its nature and scope.

Additional entry requirements

Candidates may be required to submit a research proposal for consideration by the School as part of their application.

DURATION

The MPhil programme can commence at anytime in the academic year. Normal duration is 12 months full time or 24 months part time. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

Assessment is by examination of a written thesis. To be awarded a MPhil, a candidate must demonstrate that, in pursuance of an agreed project, he/she has met all of the following criteria:

- Has made a contribution to knowledge and scholarship

- Can display an appropriate depth and breadth of knowledge and understanding of the relevant field(s) of study
- Has gained a corresponding level of expertise with respect to relevant methodologies and techniques
- Has presented a thesis with the appropriate structure and written style

Evidence as to whether or not these criteria are met will be found in the thesis. An oral examination may be required.

For instructions regarding formatting and submission of thesis for examination see ['University Guidelines for Research Degree Programmes'](#)

MCH RESEARCH

OVERVIEW

The MCh research degree is a masters research programme offered in the School of

Medicine for Surgeons which will prepare graduates to develop, improve and enhance knowledge and understanding in their chosen area of research.

The supervisor

The primary supervisor(s) is responsible for the overall management of the student's training and research project. The supervisor(s) must meet the criteria set out in the [University Guidelines](#) and fulfil the following:

- be an active scholar and researcher with good records of achievement and publication
- have a PhD in a suitable academic area or an equivalent record of achievement

Graduate Research Committee

Every research student and supervisor has the support of a Graduate Research Committee which is charged with ensuring compliance with basic good practices and will oversee student progress.

ENTRY REQUIREMENTS

Candidates should normally have a honours standard in Medicine from NUI Galway or possess qualifications deemed by the University to be equivalent. Candidates shall be eligible to register onto the MCh programme under the following conditions:

- A period of not less than five years shall have elapsed from the time the candidate obtained the degrees of MB BCh BAO, or the accepted equivalent qualification and not less than four years of which shall have been spent in the practice of surgery and surgical science at a level approved by the College of Medicine, Nursing and Health Sciences.
- The candidate must pass a preliminary clinical examination in general surgery. Exemption from this examination may be granted if the College considers that the candidate holds a suitable senior surgical qualification acquired by examination.
- The application will also require the support of an academic staff member who is approved by the College to supervise the research in terms of its nature and scope.

Candidates for Higher Medical Degrees will not be examined in the Clinical or Practical Part of the Examination in hospitals in which they, at the time, hold appointments.

Additional entry requirements

Candidates may be required to submit a research proposal for consideration by the School as part of their application.

DURATION

The MCh programme can commence at anytime in the academic year. Normal duration is 12 months full time or 24 months part time. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

Assessment is by examination of a written thesis. To be awarded a MCh, a candidate must demonstrate that, in pursuance of an agreed project, he/she has met all of the following criteria:

- Has made a contribution to knowledge and scholarship
- Can display an appropriate depth and breadth of knowledge and understanding of the relevant field(s) of study
- Has gained a corresponding level of expertise with respect to relevant methodologies and techniques
- Has presented a thesis with the appropriate structure and written style

Evidence as to whether or not these criteria are met will be found in the thesis. An oral examination may be required.

For instructions regarding formatting and submission of thesis for examination see ['University Guidelines for Research Degree Programmes'](#)

MASTER OF SCIENCE (BY RESEARCH)

OVERVIEW

The M.Sc. (by Research) degree is a masters research programme offered by the School

of Medicine which will equip students to successfully develop and carry out a piece of research in their chosen area of research.

The supervisor

The primary supervisor(s) is responsible for the overall management of the student's training and research project. The supervisor(s) must meet the criteria set out in the [University Guidelines](#) and fulfil the following:

- be an active scholar and researcher with good records of achievement and publication
- have a PhD in a suitable academic area or an equivalent record of achievement

Graduate Research Committee

Every research student and supervisor has the support of a Graduate Research Committee which is charged with ensuring compliance with basic good practices and will oversee student progress.

ENTRY REQUIREMENTS

Candidates should normally have a honours standard in a relevant academic discipline at primary degree level or equivalent together with the support of an academic staff member who is approved by the College to supervise the research in terms of its nature and scope.

Additional entry requirements

Candidates may be required to submit a research proposal for consideration by the School as part of their application.

DURATION

The M.Sc. programme can commence at anytime in the academic year. Normal duration is up to 24 months full time or 36 months part time. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

Assessment is by examination of a written thesis. To be awarded a MSc, a candidate must demonstrate that, in pursuance of an agreed project, he/she has met all of the following criteria:

- Has made a contribution to knowledge and scholarship
- Can display an appropriate depth and breadth of knowledge and understanding of the relevant field(s) of study

- Has gained a corresponding level of expertise with respect to relevant methodologies and techniques
- Has presented a thesis with the appropriate structure and written style

Evidence as to whether or not these criteria are met will be found in the thesis. An oral examination may be required.

For instructions regarding formatting and submission of thesis for examination see ['University Guidelines for Research Degree Programmes'](#)

THE DOCTOR OF PHILOSOPHY (PHD) AND DOCTOR OF MEDICINE (MD) DEGREES

[Level 10; ref. www.nfq.ie]

The College of Medicine, Nursing and Health Sciences offers higher research degrees in most disciplines leading to a PhD. The School of Medicine offers a higher research degree leading to a MD based on research.

The PhD is awarded following successful completion of a programme of supervised research and advanced education and training. The degree will be awarded only where the outcome of the research makes an original and substantial contribution to knowledge and where the candidate has demonstrated the capacity to pursue original research and scholarship.

The MD is, in accordance with national and international norms, provided to encourage the development of advanced research skills in medical graduates and the medical profession, and is adapted to the particular circumstances of advanced professional training in that profession. The nature of the preparation for the degree is similar to other research doctoral degrees, but research for the degree is normally completed within a shorter period of time, typically two years of full-time research and study. The primary purpose of the MD level research is to develop in the student the skills and competencies required to conduct effective research and to make a significant contribution to new knowledge and understanding in the theory and/or practice of any area of medicine or medical science.

The School of Medicine offers a medical degree programme (MB, BCh, BAO) combined with a research programme leading to the award of the degree of PhD. The primary purpose of the combined medical programme and PhD programme is the development of advanced research skills in medical graduates to enable them make a significant contribution to new knowledge and understanding in the theory and/or practice of an area of medicine or medical science. Regulations for the award of MB/PhD are set out in **Ph.D DEGREE WITHIN THE UNDERGRADUATE MEDICAL PROGRAMME**

STRUCTURED PHD

OVERVIEW

The structured PhD degree is a doctoral training programme with the core component of advancement of knowledge through original research and integrated support for professional development. The programme is student centred and the qualification is designed to enhance, improve and directly engage the student in relevant research skills. In addition, it will offer the student disciplinary, generic and transferable skills, tailored to suit the experience of students and reflect the disciplinary requirements.

The supervisor

The primary supervisor(s) is responsible for the overall management of the student's training and research project. The supervisor(s) must meet the criteria set out in the [University Guidelines](#) and fulfil the following:

- be an active scholar and researcher with good records of achievement and publication
- have a PhD in a suitable academic area or an equivalent record of achievement

Graduate Research Committee

Every research student and supervisor has the support of a Graduate Research Committee which is charged with ensuring compliance with basic good practices and will oversee student progress.

ECTs Weighting

- Full time PhD: The PhD requires the successful completion of 90ECTs per annum. The structured component will require the successful completion of a minimum of 30ECTs, a maximum of 90 ECTS, but a recommended normal maximum of 45 ECTS over the entire duration of the programme. The balance of ECTS awarded each year will be for the research component of the PhD.
- Part time PhD: The PhD requires the successful completion of 60ECTs per annum. The structured component will require the successful completion of a minimum of 20ECTs, a maximum of 60 ECTS, but a recommended normal maximum of 30 ECTS over the entire duration of the programme. The balance of ECTS awarded each year will be for the research component of the PhD.

ENTRY REQUIREMENTS

Candidates should normally have a high honours standard in a relevant academic discipline at primary degree level or equivalent together with the support of an academic staff member who is approved by the College to supervise the research in terms of its nature and scope.

Additional entry requirements

Candidates may be required to submit a research proposal for consideration by the School as part of their application.

DURATION

Normal duration is 4 years full time or 6 years part time. In exceptional circumstances, the programme may be completed in a shorter period where there is approval by the supervisor and the relevant School. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

Assessment is by examination of a written thesis and oral defence. To be awarded a PhD, a candidate must demonstrate that, in pursuance of an agreed project, he/she has met all of the following criteria:

- Has made a significant contribution to knowledge and scholarship
- Has demonstrated a capacity for original and critical thought
- Can display an appropriate depth and breadth of knowledge and understanding of the relevant field(s) of study in the thesis and at the viva examination
- Has gained significant expertise with respect to basic and advanced methodologies and techniques
- Has presented a thesis with the appropriate structure and written style
- Has completed work that is suitable for publication

Evidence as to whether or not these criteria are met is found in the thesis, but the oral examination or viva is critical to confirmation that the required standards have been achieved.

For instructions regarding formatting and submission of thesis for examination see '[University Guidelines for Research Degree Programmes](#)'. The PhD thesis may be presented for examination in either monograph style or article based format.

The Article based PhD is available to registered students on full or part time, structured PhD programmes within the CMNHS. Students registered on non-structured PhD programmes will not normally be permitted to submit in this format. A minimum of three original, published (peer reviewed) research papers in international leading journals of appropriate impact factor for the area of research is required. If no methodological papers are part of the submission, the student must include a detailed methodological chapter. In line with University guidelines, only articles which are based on research which has been undertaken by the student while registered for the PhD at NUIG are admissible. In addition, the PhD candidate would normally be the first or leading author on the major part of the work. Joint publications may be included but the candidate must make explicit, their contribution to the work.

DOCTORATE IN NURSING PRACTICE

DOCTORATE IN MIDWIFERY PRACTICE

OVERVIEW

This programme is aimed at Masters-prepared candidates working at senior levels (i.e. a level which allows them to initiate and lead practice development), for example, advanced practitioners, nurse or midwifery managers or practice development coordinators.

The Doctorate in Nursing Practice (DNP) or Doctorate in Midwifery Practice (DMP) is a practice-focused doctorate targeted at senior nurses and midwives. The programme combines a focus on applying existing evidence to improve practice with practice leadership. The programme will prepare nurse and midwife leaders to be capable of responding to current demands and challenges in healthcare and service delivery such as: (1) the rapid expansion of practice-based knowledge and skills (2) the increased complexity of patient care, (3) national concern about the quality of care and patient safety and (4) the urgent need to design, implement and evaluate innovative practice and health care interventions.

The programme will be delivered in partnership with Fairfield University, Connecticut, USA and with hospital based partners the Galway Roscommon University Hospitals Group (GRUH) and Danbury Hospital, Connecticut.

STRUCTURE AND DELIVERY

The programme is modelled on the programme delivered by Fairfield University and comprises of: (1) six taught modules (three modules will be delivered by Fairfield University and three modules by NUI Galway which are open to students on both sites) (2) immersion experiences and (3) completion of a practice portfolio. The taught element of the programme will be delivered via blended learning using a combination of (synchronous and asynchronous) on-line and face-to-face teaching. The programme will be offered in partnership and students will share content across sites.

As required under [University Guidelines](#) the programme will provide the student with the support of a nominated supervisor responsible for the overall management of their training and research, and a Graduate Research Committee which supports both the student and their supervisor to ensure compliance with basic good practices and to oversee student progress.

ECTs Weighting

- The PhD requires the successful completion of 90ECTs per annum full-time and 60 ECTs per annum part-time. The taught element of the programme accounts for approximately 40% of the total credits. The remainder are allocated to research focused work (60%) presented in the students practice portfolio i.e. the equivalent of a thesis.

LEARNING OUTCOMES

The Doctorate in Nursing Practice (DNP) or Doctorate in Midwifery Practice (DMP) aims to further develop nurses or midwives practice expertise and capacity to assure quality patient outcomes, lead and manage change. This programme will prepare participants to:

1. Initiate and lead practice and/or care delivery development in their specialism.
2. Translate research into practice.
3. Competently and independently initiate and lead practice-based research.
4. Evaluate patient, population, and healthcare system outcomes.
5. Lead quality improvement.
6. Contribute to nursing or midwifery policy development at local and national level.
7. Function as leaders in their specialism.

ENTRY CRITERIA

All applicants must meet the following entry criteria:

- Normally have attained a high honours standard in a nursing, midwifery or other relevant master's degree programme;
- Be a registered nurse or midwife on the active Register with An Bord Altranais agus Cnáimhseachais na hÉireann or be qualified for such registration *or* hold an appropriate active nursing registration as recognised in the country in which they practice;
- Have a minimum of one-year experience post completion of his/her master's degree;
- Be currently employed as a nurse or midwife.
- Provide a letter of support from his/her employer confirming that he/she will have opportunities to initiate and lead practice-based initiatives at a level that will enable him/her to meet the programme learning outcomes.

Applications will be evaluated on the basis of their:

- Academic record;
- Written personal statement of 2,500 words in which the applicant:
- Discusses a practice problem in his/her practice field that in his/her experience has a broad impact on patient care outcomes. This problem should be a potential area that he/she will focus on during the DNP/DMP programme.
- States professional goals (i.e. an action plan) for addressing the problem identified.
- Explains how a DNP/DMP degree will enable him/her to reach his/her goals

NUMBER OF PLACES:

There are five places for academic year 2013/2014. The number of places will be reviewed in subsequent years.

DURATION

Programme duration is 4 years full time or 6 years part time. In exceptional circumstances and only if the structure of the programme allows it, the programme may be completed in a shorter period where there is approval by the supervisor and the relevant School. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

The student must successfully complete each module (pass/fail) and demonstrate in his/her practice portfolio that he/she has met the criteria laid down in the University Guidelines for Research Degree Programmes. Evidence as to whether or not these criteria are met is found in the practice portfolio, but the oral examination or viva is critical to confirmation that the required standards have been achieved.

NON-STRUCTURED PHD

OVERVIEW

The PhD degree is a doctoral training programme with the core component of advancement of knowledge through original research.

The supervisor

The primary supervisor(s) is responsible for the overall management of the student's training and research project. The supervisor(s) must meet the criteria set out in the [University Guidelines](#) and fulfil the following:

- be an active scholar and researcher with good records of achievement and publication
- have a PhD in a suitable academic area or an equivalent record of achievement

Graduate Research Committee

Every research student and supervisor has the support of a Graduate Research Committee which is charged with ensuring compliance with basic good practices and will oversee student progress.

ENTRY REQUIREMENTS

Candidates should normally have a high honours standard in a relevant academic discipline at primary degree level or equivalent together with the support of an academic staff member who is approved by the College to supervise the research in terms of its nature and scope.

Additional entry requirements

Candidates may be required to submit a research proposal for consideration by the School as part of their application.

DURATION

Normal duration is 3 or 4 years full time or 6 years part time. In exceptional circumstances, the programme may be completed in a shorter period where there is approval by the supervisor and the relevant School. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

Assessment is by examination of a written thesis and oral defence. To be awarded a PhD, a candidate must demonstrate that, in pursuance of an agreed project, he/she has met all of the following criteria:

- Has made a significant contribution to knowledge and scholarship
- Has demonstrated a capacity for original and critical thought

- Can display an appropriate depth and breadth of knowledge and understanding of the relevant field(s) of study in the thesis and at the viva examination
- Has gained significant expertise with respect to basic and advanced methodologies and techniques
- Has presented a thesis with the appropriate structure and written style
- Has completed work that is suitable for publication

Evidence as to whether or not these criteria are met is found in the thesis, but the oral examination or viva is critical to confirmation that the required standards have been achieved.

For instructions regarding formatting and submission of thesis for examination see ['University Guidelines for Research Degree Programmes'](#)

STRUCTURED MD

OVERVIEW

The structured MD degree is a doctoral training programme offered by the School of Medicine with the core component of advancement of knowledge through original research and integrated support for professional development. The programme is

student centred and the qualification is designed to enhance, improve and directly engage the student in relevant research skills. In addition, it will offer the student disciplinary, generic and transferable skills, tailored to suit the experience of students and reflect the disciplinary requirements.

The supervisor

The primary supervisor(s) is responsible for the overall management of the student's training and research project. The supervisor(s) must meet the criteria set out in the [University Guidelines](#) and fulfill the following:

- be an active scholar and researcher with good records of achievement and publication
- have a PhD in a suitable academic area or an equivalent record of achievement

Graduate Research Committee

Every research student and supervisor has the support of a Graduate Research Committee which is charged with ensuring compliance with basic good practices and will oversee student progress.

ECTs Weighting

- Full time MD: The MD requires the successful completion of 90ECTs per annum. The structured component will require the successful completion of a minimum of 20ECTs, a maximum of 60 ECTS, but a recommended normal maximum of 30 ECTS over the entire duration of the programme. The balance of ECTS awarded each year will be for the research component of the MD.
- Part time MD: The structured component will require the successful completion of a minimum of 20ECTs, a maximum of 60 ECTS, but a recommended normal maximum of 30 ECTS over the entire duration of the programme. The balance of ECTS awarded each year will be for the research component of the PhD.

ENTRY REQUIREMENTS

Candidates should normally have a high honours standard in the degrees of M.B., B.Ch., B.A.O. from NUI Galway or possess qualifications deemed by the University to be equivalent. Candidates shall be eligible to register onto the MD programme, three years after obtaining the Degree of Bachelor of Medicine. The application will also require support of an academic staff member who is approved by the College to supervise the

research in terms of its nature and scope.

Additional entry requirements

Candidates may be required to submit a research proposal for consideration by the School as part of their application.

DURATION

Minimum duration of registration is normally 24 months full time or 36 months part time. Normal completion time is 2 years full time or 3 years part time. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

Assessment is by examination of a written thesis and oral defence. To be awarded a MD, a candidate must demonstrate that, in pursuance of an agreed project, he/she has met all of the following criteria:

- Has made a significant contribution to knowledge and scholarship
- Has demonstrated a capacity for original and critical thought
- Can display an appropriate depth and breadth of knowledge and understanding of the relevant field(s) of study in the thesis and at the viva examination
- Has gained significant expertise with respect to basic and advanced methodologies and techniques
- Has presented a thesis with the appropriate structure and written style
- Has completed work that is suitable for publication

Evidence as to whether or not these criteria are met is found in the thesis, but the oral examination or viva is critical for confirmation that the required standards have been achieved.

For instructions regarding formatting and submission of thesis for examination see ['University Guidelines for Research Degree Programmes'](#)

The MD thesis may be presented for examination in either monograph style or article based format.

The Article based MD is available to registered students on full or part time, structured MD programmes within the CMNHS. Students registered on non-structured MD programmes will not normally be permitted to submit in this format. A minimum of three original, published (peer reviewed) research papers in international leading journals of appropriate impact factor for the area of research is required. If no methodological papers are part of the submission, the student must include a detailed methodological chapter. In line with University guidelines, only articles which are based on research which has been undertaken by the student while registered for the MD at NUIG are admissible. In addition, the MD candidate would normally be the first or leading author on the major part of the work. Joint publications may be included but the candidate must make explicit, their contribution to the work.

NON-STRUCTURED MD

OVERVIEW

The MD degree is a doctoral training programme offered by the School of Medicine with the core component of advancement of knowledge through original research and integrated support for professional development. The programme is student centred and

the qualification is designed to enhance, improve and directly engage the student in relevant research skills.

The supervisor

The primary supervisor(s) is responsible for the overall management of the student's training and research project. The supervisor(s) must meet the criteria set out in the [University Guidelines](#) and fulfil the following:

- be an active scholar and researcher with good records of achievement and publication
- have a PhD in a suitable academic area or an equivalent record of achievement

Graduate Research Committee

Every research student and supervisor has the support of a Graduate Research Committee which is charged with ensuring compliance with basic good practices and will oversee student progress.

ENTRY REQUIREMENTS

Candidates should normally have a high honours standard in the degrees of M.B., B.Ch., B.A.O. from NUI Galway or possess qualifications deemed by the University to be equivalent. Candidates shall be eligible to register onto the MD programme, three years after obtaining the Degree of Bachelor of Medicine. The application will also require support of an academic staff member who is approved by the College to supervise the research in terms of its nature and scope.

Additional entry requirements

Candidates may be required to submit a research proposal for consideration by the School as part of their application.

DURATION

Minimum duration of registration is normally 24 months full time or 36 months part time. Normal completion time is 2 years full time or 3 years part time. If candidates do not complete the degree within the due period from the date of registration they must re-apply to the College, presenting justification for an extension.

ASSESSMENT

Assessment is by examination of a written thesis and oral defence. To be awarded a

MD, a candidate must demonstrate that, in pursuance of an agreed project, he/she has met all of the following criteria:

- Has made a significant contribution to knowledge and scholarship
- Has demonstrated a capacity for original and critical thought
- Can display an appropriate depth and breadth of knowledge and understanding of the relevant field(s) of study in the thesis and at the viva examination
- Has gained significant expertise with respect to basic and advanced methodologies and techniques
- Has presented a thesis with the appropriate structure and written style
- Has completed work that is suitable for publication

Evidence as to whether or not these criteria are met is found in the thesis, but the oral examination or viva is critical for confirmation that the required standards have been achieved.

For instructions regarding formatting and submission of thesis for examination see [‘University Guidelines for Research Degree Programmes’](#)

SCHOLARSHIPS/AWARDS

UNIVERSITY SCHOLAR SCHEME

Údarás na hOllscoile will confer the title University Scholar on students who obtain the minimum requirement at the relevant examination as specified at 5.2 below.

The title University Scholar may be held with other Scholarships or Grants awarded by the University or by an external body.

Value - An award of €250 will be made to each University Scholar.

Tenure The title is tenable only at National University of Ireland, Galway.

Condition of Award - To register as a student of the University in the College in which the title is awarded by the due registration date. Failure to complete the registration requirement will render the student ineligible without further notice.

Basis of Award

5.1 The award will be made on the results of fulltime undergraduate degree examinations other than the degree examination itself.

5.2 In September 2013, the title will be awarded to students who obtained the following minimum standards in the session 2012/13.

College	Years /Stages	Minimum Requirement
The College of Medicine, Nursing and Health Sciences Students whose examination performance meets the minimum requirement <i>AND</i> is ranked in the top 7% of the year class²	Medicine Foundation Year First Medical Year Second, Third and Fourth Nursing - First, Second and Third Year Programmes in Occupational Therapy, Podiatry, Speech and Language Therapy First, Second and Third Year	First-class Honours – 80% or over First-class Honours – 80% or over First-class Honours – 70% or over First-class Honours -70% or over First-class Honours -70% or over

² Students meeting the minimum requirement who fall outside of the top 7% of the year class are not eligible for the award.

THE COLLEGE OF MEDICINE, NURSING AND HEALTH SCIENCES UNDERGRADUATE AWARDS

BANK OF IRELAND AWARDS: HONOURS BACHELOR OF NURSING SCIENCE (GENERAL): BEST RESEARCH PROJECT MARK

Awards are presented to students from the undergraduate programme honours Bachelor of Nursing Science (General) for the best research project mark. The awards are sponsored by the Bank of Ireland.

DR REUBEN BERMAN PRIZES

Medical Informatics and Medical Education award each year two fourth year medical students with the Berman Prizes which consists of six weeks clinical attachments in the Hennepin County Medical Center in Minneapolis, Minnesota, USA. These awards are based on the results the students achieved in the subject Medical Informatics and Medical Education that year.

GOLD MEDAL IN GENERAL PRACTICE

A Gold Medal will be awarded annually to the top performing student as determined by the Extern in General Practice during the penultimate medical year of the MB Degree Examination.

IRISH ASSOCIATION OF SPEECH AND LANGUAGE THERAPISTS PRIZE

The annual Irish Association of Speech and Language Therapists (IASLT) Prize is awarded to the fourth year student with the highest mark in Clinical Education on the Speech and Language Therapy course at NUI Galway.

THE NOLAN MEDAL (Clinical Ophthalmology)

Ophthalmology, a discipline within the College of Medicine, Nursing and Health Sciences has awarded for many years the O'Malley Medal for the first placed student in the Ophthalmology Final Medical Part I Examination. In view of the outstanding contributions made by Dr John Nolan, retired Consultant Ophthalmologist, to the development of Ophthalmology, both within the College and in the Western Health Board, his colleagues have agreed to sponsor a further prize for students taking the Ophthalmology Examination.

The student who obtains first place in the clinical section of the Ophthalmology Examination at the Summer M.B. Degree Examination will be awarded the Nolan

Medal for Clinical Ophthalmology. The first award was made to graduates of 2003.

**DOCTORS SAL AND CONOR O'MALLEY MEDAL
(Ophthalmology)**

A Gold Medal will be awarded annually to the student who obtains the highest marks in Ophthalmology at the Summer M.B. Degree Examination.

JAMES P. MURRAY MEMORIAL GOLD MEDAL IN RADIOLOGY

The James P. Murray Memorial Gold Medal is awarded for the best presentation from registered medical students (undergraduate and postgraduate) made at the College of Medicine, Nursing and Health Sciences Medical Students' Research Meeting.

SIEMENS AWARD IN RADIOLOGY

The Siemens Award is given to the student who obtains the highest marks in the Radiology attachment in Final Medical.

Postgraduate Awards

**THE AGFA-GEVAERT TRAVELLING SCHOLARSHIP IN
RADIOLOGY**

This Scholarship has been endowed by Agfa-Gevaert (Ireland) Limited and is awarded to enable a young Galway, Graduate to pursue a short course of study or research abroad, as part of his/her post-graduate training in Radiology. Graduates of National University of Ireland, Galway, up to 10 years after graduation, are eligible for this award, which will be decided by a University Committee representative of the Medical, Nursing and Health Sciences College. In the event of a suitable applicant not being available in any year, the interest available may be carried over to augment the funds available in the subsequent year. Further information and details concerning application are available from the Professor of Radiology, University College Hospital, Galway.

The value of the Scholarship is €1,200.

**DR TONY CARNEY GOLD MEDAL (MSc (SPORTS AND EXERCISE
MEDICINE))**

The Gold Medal is awarded to the student who achieves the best overall result in the MSc (Sports and Exercise Medicine) Degree Programme.

MARY COSTELLO GOLD MEDAL (MSc (SPORTS AND EXERCISE PHYSIOTHERAPY))

The Gold Medal is awarded to the student who achieves the best overall result in the MSc (Sports and Exercise Physiotherapy) Degree Programme.

THE PROFESSORIAL POSTGRADUATE TRAVEL PRIZE IN OBSTETRICS AND GYNAECOLOGY SUPPORTED BY ETHICON LIMITED

Ethicon Limited have agreed to award a sum of approximately €777 (£500 sterling) per annum over the next five years to help fund a short course abroad for a postgraduate trainee in Obstetrics and Gynaecology, to be known as "The Professorial Postgraduate Travel Prize".

THE DOCTOR JOHN F. KEENAN TRAVELLING SCHOLARSHIP

This Scholarship is endowed by the late John F. Keenan, B.A., MB BCH BAO (a graduate of the University 1892-1897), who by his Will bequeathed to the University certain portions of his estate for the promotion of Medical Research. The original Endowment, as ascertained by the Executors of the donor on the seventh day of March, 1947, consisted of securities and cash valued at €7063 (approx.).

The present value of the Scholarship is €12,500.

Údarás na hOllscoile, having accepted the Bequest has founded the above Scholarship, and has adopted the following rules in regard to it:—

1. The value of the Scholarship shall be as determined by Údarás na hOllscoile.
2. The Scholarship is available to a graduate in Medicine and Health Sciences of the University of either sex of Irish parentage, who has:—
 - (a) obtained Honours in the MB BCH BAO Examination;
 - (b) presented for the MB BCH BAO Examination not later than the month of December in the sixth year of medical study;
 - (c) been adjudged by the College of Medicine, Nursing and Health Sciences to have attained an adequate Honours Standard in the undergraduate course as a whole;
 - (d) been adjudged by the College of Medicine, Nursing and Health Sciences to have shown special aptitude for research during the undergraduate course.

Note: For the purpose of (b) above there shall not be counted:

- (i) an extra year spent in taking a Medical B.Sc. Degree;
- (ii) time lost owing to illness properly certified.

3. The Scholarship shall be awarded by Údarás na hOllscoile on the recommendation of the Academic Council made after consultation with the College of Medicine, Nursing and Health Sciences. The College of Medicine, Nursing and Health Sciences shall, for the purpose, consider the report of the Professor of Medicine and of the Extern

Examiner in Medicine. Údarás na hOllscoile may withhold the Scholarship if sufficient merit be not shown.

4. (a) The Scholarship shall be awarded once only in every four years, shall be awarded in the month of January, and was first awarded in January, 1951;

(b) If the Scholarship be not awarded in the official year of award, it may be awarded in any one of the three succeeding years of a four-year period;

(c) Should no award be made in a four-year period, more than one Scholarship may be subsequently offered.

5. Only Graduates in Medicine and Health Sciences of the four years preceding the first day of January of the year of award, are eligible for the Scholarship.

6. The Candidate to whom the Scholarship is awarded shall before being permitted to take up the Scholarship first serve as a House Physician in a Recognised General Hospital for a period of not less than six months or more than twelve months, unless he/she has already done so. He/she shall then pursue a Course of Research in Medicine and Health Sciences at some centre abroad approved by the Professor of Medicine in the University.

7. The Scholarship is tenable by the Scholar for a period of two consecutive years. The said two-year period shall commence from the day of termination of period of service as House Physician or (in the case of a candidate who has already served as House Physician) from the date of award of the Scholarship. The Scholarship shall in the first instance be awarded for one year only, but may be continued by Údarás na hOllscoile for a second year on the recommendation of the Academic Council. Before making such recommendation, the Academic Council must be satisfied of the progress of the scholar and shall consider the report of the College of Medicine, Nursing and Health Sciences and the report of the Head of the Research School in which the Scholar is engaged.

8. Candidates shall lodge their applications for the Scholarship with the Admissions Office of the University not later than the first day of December of the year immediately preceding the year of award.

9. The Scholarship will be paid in equal half-yearly instalments. The first instalment will be paid on receipt of official notification from a Research Centre abroad to the effect that the Scholar has commenced work there.
